#1 Opinion · 269 từ · AI 8.0 (chấm chéo 8.0)

In your opinion, should countries invest more in education? Explain why.

It is widely argued that national governments ought to devote a larger share of public spending to schooling. In my opinion, this is entirely justified, since greater investment in education fuels economic growth and helps to close the gap between rich and poor.

To begin with, a well-funded education system produces the skilled workforce on which a modern economy depends. Employers in sectors such as engineering, healthcare and finance increasingly seek graduates with advanced technical knowledge, digital literacy and sound problem-solving abilities. When governments allocate substantial resources to modernising classrooms and training teachers, young people acquire the competencies that the labour market actually demands. As a result, companies can recruit qualified staff more easily, unemployment falls and productivity rises. South Korea is a case in point: its sustained investment in schooling over several decades is widely seen as a key factor in its transformation into a high-income economy.

Furthermore, public investment in education plays a pivotal role in narrowing social inequality. Where schools are poorly funded, good-quality learning tends to become a privilege reserved for wealthy families, leaving talented children from disadvantaged backgrounds with limited prospects. By contrast, when the state guarantees accessible, high-quality schooling for all, young people can progress on merit rather than family income. This, in turn, strengthens social mobility and reduces long-term dependence on welfare. Finland, which offers free education and consistently achieves strong results, illustrates how equal access can benefit society as a whole.

In conclusion, I firmly believe that countries should invest more in education. Far from being a mere expense, such spending drives prosperity and creates a fairer society for future generations.

Cụm cần nhớ

- **ought to** — nên / cần phải
- **devote a larger share of public spending to** — dành phần ngân sách công lớn hơn cho
- **greater investment** — đầu tư nhiều hơn
- **fuels economic growth** — thúc đẩy tăng trưởng kinh tế
- **close the gap between rich and poor** — thu hẹp khoảng cách giàu nghèo
- **the skilled workforce on which a modern economy depends** — lực lượng lao động có kỹ năng mà nền kinh tế hiện đại cần
- **increasingly seek graduates with** — ngày càng tìm kiếm sinh viên tốt nghiệp có…
- **allocate substantial resources to** — phân bổ nguồn lực đáng kể cho
- **the competencies that the labour market actually demands** — năng lực mà thị trường lao động thực sự cần
- **productivity rises** — năng suất tăng
- **a case in point** — một ví dụ điển hình
- **sustained investment in** — đầu tư liên tục, bền vững vào
- **is widely seen as a key factor in** — được xem rộng rãi là yếu tố then chốt trong
- **plays a pivotal role in** — đóng vai trò then chốt trong
- **narrowing social inequality** — thu hẹp bất bình đẳng xã hội
- **a privilege reserved for wealthy families** — đặc quyền chỉ dành cho gia đình giàu
- **limited prospects** — triển vọng hạn chế
- **progress on merit rather than family income** — tiến thân nhờ năng lực chứ không phải thu nhập gia đình
- **strengthens social mobility** — củng cố dịch chuyển xã hội
- **benefit society as a whole** — mang lại lợi ích cho toàn xã hội
- **drives prosperity** — thúc đẩy thịnh vượng
- **a fairer society** — xã hội công bằng hơn

Discuss the role of technology in improving education.

Technology has become a familiar presence in modern classrooms, from interactive whiteboards to online learning platforms. This essay will explain two key ways in which it improves education: by widening access to learning and by allowing teaching to be tailored to individual needs.

First and foremost, digital technology makes learning considerably more flexible and accessible. With only a laptop and an internet connection, students in remote villages can attend live lessons, revisit recorded explanations and study at times that suit their circumstances. This convenience is particularly valuable for working adults, people with disabilities and those who live far from a university. Moreover, institutions are able to serve far larger cohorts without constructing additional buildings. Platforms such as Coursera and Khan Academy, for example, now give millions of users access to everything from school mathematics to university-level courses, often free of charge.

In addition, technology allows teaching to be adapted to the needs of each learner. In a crowded classroom, a teacher rarely has time to adjust the pace for every pupil, whereas adaptive software can identify a student's weaknesses and provide targeted practice immediately. Consequently, struggling learners receive timely support while faster ones are stretched, so overall progress becomes more even. Teachers, freed from repetitive marking, can then devote more attention to discussion and encouragement. A pupil who repeatedly makes the same grammatical error, for instance, can receive tailored exercises the same day instead of waiting weeks for feedback.

To sum up, technology improves education chiefly by broadening access and by personalising instruction. Nevertheless, it should complement rather than replace teachers, whose guidance and encouragement remain irreplaceable.

Cụm cần nhớ

- **a familiar presence in** — sự hiện diện quen thuộc trong
- **widening access to learning** — mở rộng cơ hội tiếp cận học tập
- **tailored to individual needs** — được điều chỉnh theo nhu cầu cá nhân
- **makes learning considerably more flexible and accessible** — khiến việc học linh hoạt và dễ tiếp cận hơn nhiều
- **revisit recorded explanations** — xem lại bài giảng đã ghi hình
- **suit their circumstances** — phù hợp hoàn cảnh của họ
- **working adults** — người lao động trưởng thành
- **serve far larger cohorts** — phục vụ lượng người học lớn hơn nhiều
- **free of charge** — miễn phí
- **adapted to the needs of each learner** — điều chỉnh theo nhu cầu từng người học
- **adjust the pace** — điều chỉnh tốc độ
- **adaptive software** — phần mềm thích ứng
- **targeted practice** — bài luyện tập có trọng tâm
- **timely support** — hỗ trợ kịp thời
- **freed from repetitive marking** — được giải phóng khỏi việc chấm bài lặp đi lặp lại
- **devote more attention to** — dành nhiều sự chú ý hơn cho
- **tailored exercises** — bài tập được thiết kế riêng
- **waiting weeks for feedback** — chờ hàng tuần để có phản hồi
- **personalising instruction** — cá nhân hoá việc giảng dạy
- **complement rather than replace teachers** — bổ trợ chứ không thay thế giáo viên
- **remain irreplaceable** — vẫn không thể thay thế

Discuss how education influences economic development.

Education is widely regarded as a cornerstone of economic progress. This essay will outline two principal ways in which schooling influences a country's development: by creating a productive workforce and by reducing the social costs that hold economies back.

First and foremost, education supplies the human capital that modern economies need. Employers in sectors such as engineering, healthcare and finance increasingly seek workers with advanced technical knowledge, digital literacy and sound judgement, and each additional year of schooling generally makes an employee more productive and better paid. As a result, businesses grow, tax revenues rise and governments can finance infrastructure and public services. In addition, educated citizens are more likely to start companies and develop new technologies, which creates jobs and attracts investment. Singapore, a small country with few natural resources, is often cited as a nation that built its prosperity chiefly on the quality of its schools and universities.

Beyond personal advancement, education also reduces costs that would otherwise drain public budgets. Educated individuals are statistically more inclined to make healthier lifestyle choices and less prone to criminal behaviour, which eases the burden on hospitals, police and prisons. Moreover, better-informed citizens are able to plan their finances, save for retirement and avoid long-term unemployment, so fewer rely on welfare. A community in which most residents have completed secondary school, for example, typically reports lower crime and healthier habits, leaving more public money available for investment.

To sum up, education drives economic development both by building a skilled, innovative workforce and by lowering the social costs of ill health and crime. For these reasons, it deserves sustained public support.

Cụm cần nhớ

- **a cornerstone of economic progress** — nền tảng của tiến bộ kinh tế
- **a productive workforce** — lực lượng lao động năng suất
- **the human capital that modern economies need** — vốn con người mà nền kinh tế hiện đại cần
- **more productive and better paid** — năng suất và thu nhập cao hơn
- **tax revenues rise** — nguồn thu thuế tăng
- **finance infrastructure** — tài trợ cơ sở hạ tầng
- **start companies and develop new technologies** — lập doanh nghiệp và phát triển công nghệ mới
- **attracts investment** — thu hút đầu tư
- **natural resources** — tài nguyên thiên nhiên
- **built its prosperity chiefly on** — xây dựng thịnh vượng chủ yếu dựa trên
- **reduces costs that would otherwise drain public budgets** — giảm những chi phí vốn làm cạn ngân sách công
- **healthier lifestyle choices** — lựa chọn lối sống lành mạnh hơn
- **less prone to criminal behaviour** — ít có xu hướng phạm tội hơn
- **eases the burden on hospitals, police and prisons** — giảm gánh nặng cho bệnh viện, cảnh sát và nhà tù
- **long-term unemployment** — thất nghiệp dài hạn
- **rely on welfare** — phụ thuộc vào trợ cấp
- **lowering the social costs of** — giảm chi phí xã hội của
- **sustained public support** — sự hỗ trợ công lâu dài

Discuss the role of libraries in modern society.

Libraries are sometimes dismissed as relics of the pre-internet age, yet they remain a familiar feature of most towns and cities. This essay will outline two roles that they continue to play in modern society: providing free access to knowledge and acting as a hub for the community.

First and foremost, libraries give everyone access to information regardless of income. Books, newspapers, e-books and databases that would cost a great deal to buy individually are available free of charge, while public computers and internet connections serve residents who have none at home. This is especially valuable for job seekers, students from low-income families and older people, who might otherwise be excluded from the digital world. Moreover, librarians help visitors to find reliable sources, a skill that becomes more important as online misinformation spreads. A student who cannot afford textbooks, for example, can still complete a research project by borrowing materials and using the library's databases.

In addition, libraries function as community hubs that bring people together. They provide quiet study spaces, children's story sessions, language classes for newcomers and workshops on subjects ranging from computing to health, so they nurture a reading habit from an early age and strengthen social bonds across generations. For many isolated residents, such as retired people living alone, a weekly book club may be their main source of company. By adapting to modern needs, through digital lending and flexible opening hours, libraries therefore remain relevant rather than obsolete.

To sum up, libraries play a vital role by offering equal access to knowledge and by serving as meeting places that strengthen communities. For these reasons, they deserve continued public support.

Cụm cần nhớ

- **dismissed as relics of** — bị coi là di tích của
- **a hub for the community** — trung tâm của cộng đồng
- **regardless of income** — bất kể thu nhập
- **available free of charge** — có sẵn miễn phí
- **serve residents who have none at home** — phục vụ cư dân không có ở nhà
- **might otherwise be excluded** — có thể đã bị loại trừ
- **help visitors to find reliable sources** — giúp người dùng tìm nguồn đáng tin cậy
- **online misinformation spreads** — thông tin sai lệch trên mạng lan rộng
- **borrowing materials** — mượn tài liệu
- **community hubs** — trung tâm cộng đồng
- **bring people together** — gắn kết mọi người
- **quiet study spaces** — không gian học yên tĩnh
- **nurture a reading habit** — nuôi dưỡng thói quen đọc
- **strengthen social bonds across generations** — củng cố gắn kết xã hội giữa các thế hệ
- **isolated residents** — cư dân bị cô lập
- **main source of company** — nguồn bầu bạn chính
- **adapting to modern needs** — thích ứng nhu cầu hiện đại
- **remain relevant rather than obsolete** — vẫn phù hợp thay vì lỗi thời
- **meeting places** — nơi gặp gỡ
- **deserve continued public support** — xứng đáng được hỗ trợ công liên tục

Discuss the role of museums in education.

Museums are sometimes seen as places for tourists rather than for learners, yet they play a valuable part in education. This essay will outline two key contributions: bringing subjects to life through real objects, and promoting cultural understanding among people of all ages.

First and foremost, museums make abstract subjects tangible. Pupils who handle replicas, watch demonstrations and examine genuine artefacts understand history and science far better than those who only read about them in textbooks, because seeing and touching engages several senses at once. Interactive exhibits also encourage visitors to ask questions and draw their own conclusions, which develops curiosity and independent thinking. Moreover, trained guides can adapt explanations to different ages, so that a single exhibition serves both young children and university students. A class studying ancient Egypt, for example, will remember the daily lives of ordinary people far more vividly after seeing real tools, jewellery and mummies than after a lesson based on text.

In addition, museums promote cultural understanding and lifelong learning. Collections drawn from different regions and periods let visitors appreciate traditions other than their own, which weakens prejudice and strengthens respect between communities. Because many museums are free or inexpensive, and increasingly offer online tours and resources, they are accessible to people of all ages and incomes, including adults who wish to learn after leaving school. By contrast, a classroom reaches only its enrolled students. A retired visitor attending a weekend lecture on local history, for instance, may gain as much from the museum as any schoolchild.

To sum up, museums contribute to education by making learning vivid and by encouraging cultural awareness throughout life. For these reasons, they deserve continued public support.

Cụm cần nhớ

- **a valuable part in education** — vai trò giá trị trong giáo dục
- **bringing subjects to life** — làm cho môn học sống động
- **real objects** — hiện vật thật
- **cultural understanding** — hiểu biết văn hoá
- **make abstract subjects tangible** — làm môn trừu tượng trở nên hữu hình, dễ nắm bắt
- **genuine artefacts** — hiện vật thật
- **seeing and touching engages several senses at once** — nhìn và chạm cùng lúc huy động nhiều giác quan
- **ask questions and draw their own conclusions** — đặt câu hỏi và tự rút ra kết luận
- **curiosity** — sự tò mò
- **independent thinking** — tư duy độc lập
- **adapt explanations to different ages** — điều chỉnh giải thích theo từng độ tuổi
- **lifelong learning** — học tập suốt đời
- **appreciate traditions other than their own** — trân trọng những truyền thống khác với của mình
- **weakens prejudice** — làm giảm định kiến
- **strengthens respect between communities** — tăng cường sự tôn trọng giữa các cộng đồng
- **accessible to people of all ages and incomes** — dễ tiếp cận với mọi lứa tuổi và thu nhập
- **adults who wish to learn after leaving school** — người lớn muốn học tiếp sau khi rời ghế nhà trường
- **cultural awareness** — nhận thức văn hoá
- **deserve continued public support** — xứng đáng được hỗ trợ công liên tục

Discuss how cultural exchange programs benefit students.

International exchange programmes are becoming a common feature of secondary and tertiary education. This essay will outline two key ways in which they benefit students: by improving language skills and career prospects, and by promoting personal growth and cultural understanding.

First and foremost, exchanges improve languages and employability. Living in another country immerses students in a foreign language every day, so their fluency develops far more quickly than it would in a classroom at home. They also learn to adapt to unfamiliar customs, work with people from different backgrounds and solve everyday problems independently, qualities that multinational employers value highly. In addition, the friendships and professional networks formed overseas often lead to opportunities later in life. A graduate who is fluent in two languages and has lived abroad, for example, may apply for positions in several countries, which multiplies her career options.

Furthermore, exchange programmes promote personal growth and cultural understanding. Students who live with host families or study alongside classmates from other countries learn to appreciate traditions other than their own, which weakens prejudice and strengthens respect between communities. Being away from home also builds independence, confidence and resilience, since students must manage money, solve problems and make decisions without their parents. Many returning students report a clearer sense of their goals. A shy pupil who spends a term abroad, for instance, often returns more outgoing and willing to take on challenges.

To sum up, cultural exchange programmes benefit students by improving their language skills and career options and by nurturing independence and open-mindedness. For these reasons, they deserve continued support.

Cụm cần nhớ

- **a common feature of** — đặc điểm phổ biến của
- **promoting personal growth** — thúc đẩy sự trưởng thành cá nhân
- **cultural understanding** — hiểu biết văn hoá
- **fluency develops far more quickly** — độ trôi chảy phát triển nhanh hơn nhiều
- **adapt to unfamiliar customs** — thích nghi với phong tục lạ
- **work with people from different backgrounds** — làm việc với người có xuất thân khác nhau
- **multinational employers value highly** — nhà tuyển dụng đa quốc gia đánh giá cao
- **professional networks** — mạng lưới quan hệ nghề nghiệp
- **multiplies her career options** — nhân lên cơ hội nghề nghiệp
- **live with host families** — sống cùng gia đình bản xứ
- **study alongside classmates from other countries** — học cùng bạn đến từ nước khác
- **appreciate traditions other than their own** — trân trọng những truyền thống khác với của mình
- **weakens prejudice** — làm giảm định kiến
- **strengthens respect between communities** — tăng cường sự tôn trọng giữa các cộng đồng
- **builds independence, confidence and resilience** — rèn tính độc lập, tự tin và bền bỉ
- **manage money** — quản lý tiền bạc
- **solve problems** — giải quyết vấn đề
- **without their parents** — không có cha mẹ
- **a clearer sense of their goals** — nhận thức rõ hơn về mục tiêu
- **more outgoing** — cởi mở hơn
- **willing to take on challenges** — sẵn sàng đón nhận thử thách
- **cultural exchange programmes** — chương trình trao đổi văn hoá
- **improving their language skills and career options** — cải thiện ngoại ngữ và cơ hội nghề nghiệp
- **open-mindedness** — sự cởi mở

Discuss the role of physical education in schools.

Physical education is sometimes dismissed as a break from real lessons, yet it plays a valuable part in schooling. This essay will outline two important roles: protecting children's health and supporting their wellbeing and learning.

First and foremost, physical education promotes health and active habits. Many children now spend hours sitting at desks and screens, and rates of obesity and related illness are rising in many countries. Regular, well-taught PE keeps pupils active, builds strength and coordination, and teaches them how exercise and nutrition affect the body. Habits formed in childhood often last into adulthood, so schools are well placed to reduce long-term health problems and the pressure they place on health services. A child who learns to enjoy swimming or running at school, for example, is more likely to remain active as an adult.

In addition, PE supports mental wellbeing, social skills and concentration. Exercise helps young people to relieve stress and improve their mood, and pupils who move regularly tend to concentrate better in later lessons. Team games also teach cooperation, fair play and shared responsibility, qualities that classroom lessons alone rarely instil. Moreover, success in sport can build self-confidence, particularly for pupils who struggle academically. A shy pupil who gains confidence by scoring in a team game, for example, may speak up more readily in other lessons.

To sum up, physical education plays a vital role by protecting health and by nurturing wellbeing and teamwork. For these reasons, it deserves a secure place in every school timetable.

Cụm cần nhớ

- **a break from real lessons** — giờ nghỉ khỏi các bài học thực sự
- **protecting children's health** — bảo vệ sức khoẻ trẻ em
- **active habits** — thói quen vận động
- **rates of obesity and related illness are rising in many countries** — tỉ lệ béo phì và bệnh liên quan đang tăng ở nhiều nước
- **builds strength and coordination** — xây dựng sức mạnh và sự phối hợp
- **how exercise and nutrition affect the body** — vận động và dinh dưỡng ảnh hưởng cơ thể ra sao
- **last into adulthood** — kéo dài đến tuổi trưởng thành
- **well placed to** — ở vị trí thuận lợi để
- **the pressure they place on health services** — áp lực lên dịch vụ y tế
- **remain active** — vẫn năng động
- **relieve stress and improve their mood** — giải toả căng thẳng và cải thiện tâm trạng
- **concentrate better in later lessons** — tập trung tốt hơn ở các tiết sau
- **fair play** — chơi đúng luật
- **rarely instil** — hiếm khi truyền được
- **a secure place in every school timetable** — vị trí vững chắc trong mọi thời khoá biểu

#325 Opinion · 256 từ · AI 7.5 (chấm chéo 7.0)

Discuss the role of school counsellors in student wellbeing.

School counsellors are an increasingly familiar presence in modern schools. This essay will outline two roles that they play in student wellbeing: providing early emotional support, and giving guidance on learning and relationships.

First and foremost, counsellors provide early support for emotional and mental health. Pupils face pressure from exams, social media and family problems, and constant deadlines, comparison with classmates and fear of failure often lead to anxiety, sleepless nights and, in severe cases, burnout. A trained counsellor can notice warning signs, offer a confidential space to talk and refer serious cases to specialists before problems escalate. As a result, fewer students drop out or suffer long-term harm. A teenager who is anxious about exams, for example, can learn coping strategies instead of struggling alone.

In addition, counsellors give practical guidance on study, careers and relationships. They help pupils to choose subjects, plan for university or work, and develop habits such as time management. They also mediate conflicts and support victims of bullying, which creates a safer atmosphere where students can concentrate on learning. Teachers, who are not trained for these tasks, are then free to focus on teaching. Admittedly, employing counsellors costs money, and one counsellor in a large school may be overstretched. Even so, prevention is far cheaper than dealing with crises later, so schools should treat counselling as an essential service.

To sum up, school counsellors play a vital role in student wellbeing by offering early emotional support and practical guidance. For these reasons, they deserve a secure place in every school.

Cụm cần nhớ

- **an increasingly familiar presence** — sự hiện diện ngày càng quen thuộc
- **student wellbeing** — sức khoẻ tinh thần học sinh
- **early emotional support** — hỗ trợ cảm xúc sớm
- **pressure from exams, social media and family problems** — áp lực từ thi cử, mạng xã hội và gia đình
- **comparison with classmates** — so sánh với bạn cùng lớp
- **fear of failure** — nỗi sợ thất bại
- **sleepless nights** — những đêm mất ngủ
- **in severe cases** — trong trường hợp nghiêm trọng
- **notice warning signs** — nhận ra dấu hiệu cảnh báo
- **a confidential space to talk** — không gian trò chuyện bảo mật
- **refer serious cases to specialists** — chuyển ca nghiêm trọng cho chuyên gia
- **before problems escalate** — trước khi vấn đề leo thang
- **coping strategies** — chiến lược đối phó
- **time management** — quản lý thời gian
- **mediate conflicts** — hoà giải xung đột
- **support victims of bullying** — hỗ trợ nạn nhân bị bắt nạt
- **overstretched** — quá tải
- **an essential service** — dịch vụ thiết yếu

#345 Opinion · 263 từ · AI 7.5 (chấm chéo 7.5)

Discuss the role of apprenticeship programs in reducing youth unemployment.

Youth unemployment remains a stubborn problem in many countries. This essay will outline two ways in which apprenticeship programmes help to reduce it: by giving young people the work experience that employers want and by matching training to real jobs.

First and foremost, apprenticeships solve the problem of inexperience. Many young people cannot find work because employers want experience, yet they cannot gain experience without a job. Apprenticeships break this circle by combining paid employment with training, so participants build practical skills, a record of reliable performance and professional contacts while still learning. As a result, they become attractive to employers who would otherwise reject them. A school leaver who completes a three-year apprenticeship in a hospital kitchen, for example, may be offered a permanent position at the end of it.

In addition, apprenticeships match training to the real needs of employers. Because companies help to design the programmes, young people learn the competencies that the labour market actually demands, and businesses can fill shortages of skilled workers in sectors such as construction, healthcare and engineering. Employers also benefit from a reliable supply of loyal, well-trained staff, so they have an incentive to invest. Countries with strong apprenticeship systems, such as Germany, tend to have low youth unemployment, which suggests that these programmes work. Governments pay less in welfare and gain more in tax when young people are in work, so the programmes also help public finances.

To sum up, apprenticeship programmes reduce youth unemployment by providing experience and by linking training to employers' needs. For these reasons, they deserve continued public support.

Cụm cần nhớ

- **a stubborn problem** — vấn đề dai dẳng
- **work experience that employers want** — kinh nghiệm làm việc nhà tuyển dụng cần
- **matching training to real jobs** — gắn đào tạo với công việc thực
- **solve the problem of inexperience** — giải quyết vấn đề thiếu kinh nghiệm
- **break this circle** — phá vỡ vòng luẩn quẩn này
- **a record of reliable performance** — lý lịch làm việc đáng tin cậy
- **professional contacts** — mối quan hệ nghề nghiệp
- **attractive to employers** — hấp dẫn nhà tuyển dụng
- **offered a permanent position** — được mời vị trí lâu dài
- **help to design the programmes** — tham gia thiết kế chương trình
- **the competencies that the labour market actually demands** — năng lực mà thị trường lao động thực sự cần
- **fill shortages of skilled workers** — lấp thiếu hụt lao động có tay nghề
- **a reliable supply of loyal, well-trained staff** — nguồn nhân viên trung thành, được đào tạo tốt ổn định
- **an incentive to invest** — động lực để đầu tư
- **apprenticeship systems** — hệ thống học nghề
- **pay less in welfare and gain more in tax** — chi ít phúc lợi hơn và thu nhiều thuế hơn
- **public finances** — tài chính công
- **reduce youth unemployment** — giảm thất nghiệp thanh niên
- **deserve continued public support** — xứng đáng được hỗ trợ công liên tục

Discuss the role of tutors in supplementing education.

Private tuition has become a common supplement to formal schooling. This essay will outline two roles that tutors play in supplementing education: providing individual attention, and building confidence and examination skills.

First and foremost, tutors give each learner individual attention. In a crowded classroom, a teacher rarely has time to adjust the pace for every pupil, whereas a tutor can identify a student's weaknesses and provide targeted practice at once. Consequently, gaps in knowledge are closed before they grow, and quicker learners are stretched with more advanced material. Because a tutor can focus on one pupil, explanations can be repeated in several ways until the idea is clear. A pupil who repeatedly makes the same mathematical error, for instance, can receive tailored exercises the same day instead of waiting weeks for feedback.

In addition, tutors build confidence and prepare students for examinations. A patient adult who explains a topic without classmates watching helps hesitant pupils to ask questions and to believe in their ability. Tutors also teach revision techniques and exam skills, which can reduce anxiety and improve results. However, private tuition has drawbacks. It is expensive, so wealthy families enjoy a clear advantage over equally able classmates, and heavy reliance on tutors may leave pupils dependent on outside help. Governments and schools can reduce this inequality by offering free tutoring schemes and after-school support for disadvantaged pupils, so that the benefits are shared more widely.

To sum up, tutors play a valuable role in education by giving individual attention and building confidence, provided that access is made fairer.

Cụm cần nhớ

- **Private tuition** — gia sư riêng
- **a common supplement to formal schooling** — phần bổ trợ phổ biến cho giáo dục chính quy
- **supplementing education** — bổ trợ giáo dục
- **individual attention** — sự chú ý riêng
- **adjust the pace** — điều chỉnh tốc độ
- **targeted practice** — bài luyện tập có trọng tâm
- **gaps in knowledge are closed** — lỗ hổng kiến thức được lấp
- **before they grow** — trước khi lớn thêm
- **stretched with more advanced material** — được thử thách bằng tài liệu nâng cao hơn
- **repeated in several ways** — lặp lại bằng nhiều cách
- **until the idea is clear** — đến khi ý rõ ràng
- **tailored exercises** — bài tập được thiết kế riêng
- **waiting weeks for feedback** — chờ hàng tuần để có phản hồi
- **without classmates watching** — không có bạn cùng lớp nhìn
- **believe in their ability** — tin vào năng lực của mình
- **revision techniques and exam skills** — kỹ thuật ôn tập và kỹ năng thi
- **reduce anxiety** — giảm lo âu
- **a clear advantage over** — lợi thế rõ rệt so với
- **dependent on outside help** — phụ thuộc vào sự giúp đỡ bên ngoài
- **free tutoring schemes** — chương trình dạy kèm miễn phí
- **after-school support** — hỗ trợ sau giờ học
- **shared more widely** — chia sẻ rộng hơn

#9 Extent · 280 từ · AI 8.0 (chấm chéo 8.0)

To what extent should media studies be taught in schools? Give reasons for your answer.

Young people today spend a large part of their lives consuming news, advertisements and entertainment through screens. I largely agree that media studies should form part of the school curriculum, since it teaches pupils to evaluate information critically and prepares them for a media-driven world of work.

To begin with, media studies equips pupils to distinguish reliable information from misleading content. Social media platforms deliver a constant stream of news, opinion and rumour, and false claims often spread faster than corrections. Pupils who learn to check sources, identify bias and recognise emotional manipulation are far less likely to be deceived or to share misinformation. Such analytical habits also protect them as future voters, who must judge political messages that are designed to persuade rather than inform. A teenager who has analysed how a misleading headline is constructed, for example, will find it easier to question a viral post during an election campaign.

Furthermore, the subject builds practical skills with clear career value. Advertising, journalism, film and digital marketing are major industries, and even employees in unrelated fields must now communicate effectively through video, social media and online platforms. By producing short films, blogs or campaigns, pupils learn to plan, collaborate and present ideas to an audience. They also begin to understand how advertisers target young consumers, which helps them to make more informed choices about what they buy. However, media studies should not replace core subjects such as mathematics and literacy; it works best as a focused course within a balanced timetable.

In conclusion, I believe that schools should teach media studies because it develops critical judgement and employable skills, provided that it is integrated sensibly into the existing curriculum.

Cụm cần nhớ

- **form part of the school curriculum** — là một phần của chương trình học
- **evaluate information critically** — đánh giá thông tin một cách phản biện
- **prepares them for** — chuẩn bị cho họ
- **a media-driven world** — thế giới bị truyền thông chi phối
- **distinguish reliable information from misleading content** — phân biệt thông tin đáng tin với nội dung gây hiểu lầm
- **false claims often spread faster than corrections** — tin sai thường lan nhanh hơn lời đính chính
- **check sources, identify bias** — kiểm tra nguồn, nhận ra thiên kiến
- **share misinformation** — chia sẻ thông tin sai lệch
- **analytical habits** — thói quen phân tích
- **judge political messages** — đánh giá thông điệp chính trị
- **practical skills with clear career value** — kỹ năng thực hành có giá trị nghề nghiệp rõ ràng
- **communicate effectively** — giao tiếp hiệu quả
- **plan, collaborate and present ideas** — lập kế hoạch, hợp tác và trình bày ý tưởng
- **make more informed choices** — đưa ra lựa chọn sáng suốt hơn
- **should not replace core subjects** — không nên thay thế các môn cốt lõi
- **a balanced timetable** — thời khoá biểu cân đối
- **critical judgement** — khả năng phán đoán có phản biện
- **employable skills** — kỹ năng giúp dễ xin việc
- **integrated sensibly into** — được tích hợp hợp lý vào

#20 Extent · 289 từ · AI 8.0 (chấm chéo 8.0)

To what extent should critical thinking be taught in schools? Give reasons for your answer.

Critical thinking, the ability to question assumptions and weigh evidence, is often praised but rarely taught explicitly. I largely agree that it should be a core element of schooling, since it deepens learning and equips young people to cope with an overload of information.

To begin with, teaching critical thinking encourages pupils to understand ideas instead of merely memorising facts. When learners are expected to question, compare and justify their views, they grasp concepts more thoroughly and retain them for far longer. This capacity for independent reasoning is invaluable at university and in the workplace, where problems rarely come with a ready-made answer. Recruiters, for instance, consistently seek graduates who can analyse a situation, evaluate alternatives and defend a decision, rather than those who can only repeat what they have been taught. A student who has debated two sides of a historical event in class will find it easier to build a coherent argument in a later essay or meeting.

Furthermore, critical thinking is the best defence against misleading information. Pupils today encounter news, rumours and advertisements online every day, and false claims often spread faster than corrections. Those who have learned to check sources, spot bias and test an argument for logical weaknesses are far less likely to be deceived, and they become more responsible citizens when they vote or share content. However, schools need not create a separate subject: the skill is best developed within existing lessons such as science, history and literature, so that the timetable is not overloaded.

In conclusion, I believe that critical thinking deserves a central place in the curriculum because it improves understanding and protects pupils from manipulation, provided that it is woven into everyday teaching rather than added as another burden.

Cụm cần nhớ

- **question assumptions** — đặt câu hỏi với các giả định
- **weigh evidence** — cân nhắc bằng chứng
- **deepens learning** — làm sâu sắc việc học
- **overload of information** — quá tải thông tin
- **question, compare and justify their views** — đặt câu hỏi, so sánh và biện hộ cho quan điểm của mình
- **retain them for far longer** — ghi nhớ lâu hơn nhiều
- **independent reasoning** — tư duy độc lập
- **problems rarely come with a ready-made answer** — vấn đề hiếm khi có sẵn đáp án
- **defend a decision** — bảo vệ một quyết định
- **a coherent argument** — một lập luận mạch lạc
- **the best defence against misleading information** — tấm khiên tốt nhất chống lại thông tin sai lệch
- **false claims often spread faster than corrections** — tin sai thường lan nhanh hơn lời đính chính
- **check sources, spot bias and test an argument for logical weaknesses** — kiểm tra nguồn, nhận ra thiên kiến và soi lỗi logic của lập luận
- **responsible citizens** — công dân có trách nhiệm
- **a central place in the curriculum** — vị trí trung tâm trong chương trình
- **protects pupils from manipulation** — bảo vệ học sinh khỏi bị thao túng
- **woven into everyday teaching rather than added as another burden** — lồng ghép vào việc dạy hằng ngày thay vì thêm một gánh nặng

Some argue that early childhood education is the most important stage. To what extent do you agree?

Many educationalists argue that early childhood education is the most crucial stage of schooling. I largely agree with this view, since the early years lay the foundations for all later learning and offer the most effective way of reducing inequality.

To begin with, young children's brains develop with extraordinary speed, so the experiences they have before the age of six shape their later ability to learn. Through play, stories and simple group activities, children acquire language, curiosity and the habit of concentrating, and these skills allow them to benefit fully from primary school. By contrast, those who start formal schooling without them often struggle to catch up and lose confidence in their own ability. A child who has been read to daily and encouraged to ask questions, for example, usually learns to read earlier and with greater enjoyment.

Furthermore, high-quality early education is the most efficient tool for closing the gap between rich and poor. Children from disadvantaged families often begin school already behind their peers in vocabulary and social skills, and the gap tends to widen each year unless something is done early. Providing affordable nurseries and trained staff therefore helps all children to start on an equal footing, and it costs far less than remedial programmes in later years. That said, later stages remain essential: secondary and university education provide the specialist knowledge that careers require, so early learning should be seen as the foundation rather than the whole structure.

In conclusion, early childhood education is, to a large extent, the most important stage because it shapes a child's future learning and gives every child a fair start.

Cụm cần nhớ

- **the most crucial stage of schooling** — giai đoạn quan trọng nhất của việc học
- **lay the foundations for all later learning** — đặt nền móng cho mọi việc học về sau
- **reducing inequality** — giảm bất bình đẳng
- **young children's brains develop with extraordinary speed** — não trẻ nhỏ phát triển cực nhanh
- **shape their later ability to learn** — định hình khả năng học sau này
- **curiosity** — sự tò mò
- **the habit of concentrating** — thói quen tập trung
- **benefit fully from** — hưởng lợi đầy đủ từ
- **struggle to catch up and lose confidence in their own ability** — vất vả bắt kịp và mất tự tin vào năng lực bản thân
- **begin school already behind their peers** — bắt đầu đi học đã tụt sau bạn bè
- **the gap tends to widen** — khoảng cách có xu hướng nới rộng
- **start on an equal footing** — bắt đầu trên cùng vạch xuất phát
- **remedial programmes in later years** — chương trình phụ đạo, khắc phục ở các năm sau
- **remain essential** — vẫn thiết yếu
- **the foundation rather than the whole structure** — nền móng chứ không phải cả toà nhà
- **a fair start** — khởi đầu công bằng

#110 Extent · 262 từ · AI 8.0 (chấm chéo 8.0)

Some argue that technology in schools improves learning. To what extent do you agree?

Computers, tablets and interactive whiteboards are now standard equipment in many schools. I largely agree that this technology improves learning, provided that it is used purposefully rather than for its own sake.

To begin with, digital tools make lessons more engaging and help pupils to grasp difficult concepts. Simulations allow a physics class to test how a bridge behaves under different loads, and animations can show a chemical reaction or a historical battle in ways that diagrams on a page cannot. Interactive quizzes and educational games provide instant feedback, so pupils see immediately what they have misunderstood, and the element of competition keeps many reluctant learners motivated. Students who are involved in a lesson tend to concentrate longer and remember more. A geography class that explores a volcano through a three-dimensional model, for instance, gains a clearer picture than one that relies solely on a textbook photograph.

Furthermore, technology allows teachers to tailor instruction to individual pupils. In a crowded classroom, a teacher rarely has time to adjust the pace for every child, whereas adaptive software can identify weaknesses and provide targeted practice at once. As a result, struggling pupils receive timely support while faster ones are stretched, and teachers, freed from repetitive marking, can devote more attention to discussion. However, technology is only a tool: without proper teacher training and clear learning goals, tablets may become expensive distractions. Its benefits therefore depend on how it is used.

In conclusion, technology improves learning by making lessons more vivid and more personalised, but only when teachers use it with a clear educational purpose.

Cụm cần nhớ

- **standard equipment** — trang thiết bị tiêu chuẩn
- **used purposefully** — được dùng có mục đích
- **for its own sake** — vì chính nó
- **make lessons more engaging** — làm bài học hấp dẫn hơn
- **grasp difficult concepts** — nắm được khái niệm khó
- **instant feedback** — phản hồi tức thì
- **keeps many reluctant learners motivated** — giữ động lực cho nhiều học sinh vốn ngại học
- **concentrate longer and remember more** — tập trung lâu hơn và nhớ nhiều hơn
- **a clearer picture** — bức tranh rõ hơn
- **tailor instruction to individual pupils** — điều chỉnh bài giảng cho từng học sinh
- **adjust the pace** — điều chỉnh tốc độ
- **adaptive software** — phần mềm thích ứng
- **identify weaknesses and provide targeted practice** — chỉ ra điểm yếu và cho luyện tập đúng chỗ
- **timely support** — hỗ trợ kịp thời
- **freed from repetitive marking** — được giải phóng khỏi việc chấm bài lặp đi lặp lại
- **devote more attention to** — dành nhiều sự chú ý hơn cho
- **technology is only a tool** — công nghệ chỉ là công cụ
- **may become expensive distractions** — có thể trở thành thứ gây xao nhãng tốn kém
- **depend on how it is used** — phụ thuộc cách sử dụng
- **clear educational purpose** — mục đích giáo dục rõ ràng

To what extent should schools teach vocational skills? Give reasons for your answer.

Schools have traditionally focused on academic subjects, yet many young people leave them without any practical skills. I largely agree that schools should teach vocational skills, since doing so improves employment prospects and engages pupils who learn best by doing, although academic foundations must not be neglected.

To begin with, vocational training prepares pupils for the working world. Employers in sectors such as construction, healthcare, engineering and hospitality complain of shortages of workers with practical competencies, and pupils who gain such skills at school can move into stable, well-paid jobs more easily. Countries with strong apprenticeship systems, such as Germany, tend to have low youth unemployment, which suggests that practical education pays off. Such early experience also helps young people to discover which careers genuinely suit them. A teenager who learns basic electrical installation at school, for example, may qualify for an apprenticeship at sixteen instead of drifting between short-term jobs.

Furthermore, practical subjects keep engaged many pupils who find purely academic lessons discouraging. Students who struggle with written exams often thrive when they can build, repair or cook something tangible, and this success restores their confidence and reduces the risk of dropping out. Practical courses also teach teamwork, time management and problem-solving, which are valuable in any career. However, vocational teaching should not come at the expense of literacy and numeracy, and pupils should not be directed towards trades too early. Schools should offer vocational options alongside a solid academic core so that every pupil can keep future choices open.

In conclusion, schools should teach vocational skills to a large extent because they improve employability and motivation, provided that they sit within a balanced curriculum.

Cụm cần nhớ

- **focused on academic subjects** — tập trung vào môn học thuật
- **leave them without any practical skills** — ra trường mà không có kỹ năng thực hành
- **improves employment prospects** — cải thiện triển vọng việc làm
- **learn best by doing** — học tốt nhất bằng cách làm
- **academic foundations** — nền tảng học thuật
- **prepares pupils for the working world** — chuẩn bị học sinh cho thế giới việc làm
- **complain of shortages of** — phàn nàn về tình trạng thiếu
- **practical competencies** — năng lực thực hành
- **move into stable, well-paid jobs** — vào được những công việc ổn định, lương tốt
- **apprenticeship systems** — hệ thống học nghề
- **pays off** — mang lại kết quả
- **genuinely suit them** — thật sự phù hợp với họ
- **drifting between short-term jobs** — trôi giữa các việc ngắn hạn
- **keep engaged** — giữ sự hứng thú
- **discouraging** — gây nản lòng
- **thrive when they can build, repair or cook something tangible** — phát huy khi được tự tay làm, sửa hay nấu thứ gì đó hữu hình
- **restores their confidence** — khôi phục sự tự tin
- **dropping out** — bỏ học
- **time management** — quản lý thời gian
- **at the expense of literacy and numeracy** — đánh đổi biết đọc viết và tính toán
- **directed towards trades too early** — bị hướng sang nghề quá sớm
- **keep future choices open** — giữ mở các lựa chọn trong tương lai

Some argue that arts education improves creativity and problem solving. To what extent do you agree?

Painting, drama, music and design are often seen as leisure activities rather than serious learning. I largely agree that arts education improves creativity and problem solving, since it trains pupils to think originally and to tackle open-ended challenges, although other subjects also play a part.

To begin with, the arts develop creative thinking by requiring pupils to produce original work. Designing a stage set, composing a short melody or planning a mural has no single correct answer, so learners must generate ideas, test them, accept criticism and improve their work. This process of experimentation builds flexibility and confidence in one's own ideas, qualities that innovation depends on. A group designing costumes for a school play, for example, must find solutions within a limited budget and time, which teaches them to be resourceful as well as imaginative.

Furthermore, arts education strengthens problem solving. Artists must analyse materials, balance competing demands and persevere through failed attempts, which are exactly the habits needed in engineering, science and business. Employers increasingly value people who can propose fresh approaches instead of repeating established methods. However, creativity is not exclusive to the arts: science, mathematics and technology also encourage inventive thinking, and poorly taught arts lessons that simply copy models may encourage no originality at all. The benefits therefore depend on lessons that give pupils real freedom to explore and experiment, with teachers who value ideas as much as technical skill.

In conclusion, I agree to a large extent that arts education improves creativity and problem solving, provided that lessons encourage independent exploration rather than imitation.

Cụm cần nhớ

- **leisure activities rather than serious learning** — hoạt động giải trí chứ không phải học nghiêm túc
- **think originally** — suy nghĩ độc đáo
- **open-ended challenges** — thử thách mở
- **produce original work** — tạo ra tác phẩm gốc
- **has no single correct answer** — không có đáp án đúng duy nhất
- **generate ideas, test them, accept criticism and improve their work** — nghĩ ra ý tưởng, thử nghiệm, chấp nhận phê bình và cải tiến
- **builds flexibility and confidence** — xây dựng sự linh hoạt và tự tin
- **innovation depends on** — điều mà đổi mới phụ thuộc vào
- **find solutions within a limited budget** — tìm giải pháp trong ngân sách hạn chế
- **resourceful as well as imaginative** — khéo xoay xở lẫn giàu trí tưởng tượng
- **balance competing demands** — cân bằng các yêu cầu cạnh tranh
- **persevere through failed attempts** — kiên trì vượt qua thất bại
- **propose fresh approaches instead of repeating established methods** — đề xuất hướng tiếp cận mới thay vì lặp lại phương pháp cũ
- **not exclusive to** — không chỉ riêng ở
- **real freedom to explore and experiment** — tự do thực sự để khám phá và thử nghiệm
- **independent exploration rather than imitation** — khám phá độc lập thay vì bắt chước

To what extent should schools assess student wellbeing in addition to academics? Give reasons for your answer.

Schools have traditionally judged success by academic results alone. I largely agree that they should also assess student wellbeing, since a student's mental and emotional state strongly affects learning, although this must be done sensitively.

To begin with, wellbeing and learning are closely linked. Pupils who feel anxious, lonely or exhausted concentrate less, take fewer risks and are more likely to fall behind, whereas those who feel secure and motivated tend to perform more consistently across the curriculum. By monitoring wellbeing through short surveys and conversations, schools can identify problems early, before they become crises. A pupil whose results suddenly decline, for example, may be struggling with bullying or problems at home, and an early conversation can address the cause rather than only the symptoms.

Furthermore, assessing wellbeing encourages schools to take responsibility for the whole child. When a school measures only grades, it sends the message that nothing else matters, and pressure on pupils increases. Tracking wellbeing leads schools to improve homework policies, bullying prevention and pastoral support, which benefits the entire community. Beyond personal advancement, this approach brings wider benefits to society, since healthier young people grow into more capable adults and place less burden on health services. However, assessment must be sensitive. Formal tests of mood could stigmatise pupils or create extra pressure, and sensitive data must be kept confidential. Anonymous surveys, observation by trained staff and access to counsellors are more appropriate than numerical scores.

In conclusion, schools should assess wellbeing to a large extent, because it supports learning and allows early help, provided that the methods are confidential and supportive.

Cụm cần nhớ

- **judged success by academic results alone** — đánh giá thành công chỉ bằng kết quả học tập
- **assess student wellbeing** — đánh giá sức khoẻ tinh thần học sinh
- **mental and emotional state** — trạng thái tinh thần và cảm xúc
- **strongly affects learning** — ảnh hưởng mạnh đến việc học
- **closely linked** — gắn bó chặt chẽ
- **take fewer risks** — ít dám thử hơn
- **fall behind** — bị tụt lại phía sau
- **feel secure and motivated** — cảm thấy an toàn và có động lực
- **perform more consistently** — thể hiện ổn định hơn
- **monitoring wellbeing** — theo dõi sức khoẻ tinh thần
- **address the cause rather than only the symptoms** — giải quyết nguyên nhân thay vì chỉ triệu chứng
- **take responsibility for the whole child** — chịu trách nhiệm về toàn diện đứa trẻ
- **pastoral support** — hỗ trợ chăm sóc học sinh
- **stigmatise pupils or create extra pressure** — gây kỳ thị học sinh hoặc thêm áp lực
- **kept confidential** — được giữ bí mật
- **Anonymous surveys** — khảo sát ẩn danh

Some argue that free university tuition increases equality. To what extent do you agree?

Some governments have abolished university tuition fees in the belief that this promotes equality. I largely agree that free tuition increases equality, since it removes a major financial barrier, although it cannot achieve equality on its own.

To begin with, free tuition opens higher education to talented students from low-income families. Where fees are high, young people from modest backgrounds may decide not to apply at all, fearing years of debt that they cannot repay, and those who do apply may choose cheaper courses regardless of their abilities. Removing fees means that ability, rather than family income, decides who studies, which strengthens social mobility. A pupil with excellent grades whose parents cannot afford to support her, for example, can accept a place without risking heavy debt.

Furthermore, free tuition benefits society by widening the pool of skilled graduates, which raises productivity and narrows the gap between rich and poor over time. However, its effect on equality has limits. Taxpayers must fund it, and some of the benefit goes to wealthier students who would have paid anyway. In addition, inequality begins long before university, in the quality of early education and in family support, so students from disadvantaged areas may still fail to reach higher education. Free tuition therefore needs to be combined with support for living costs and investment in early schooling.

In conclusion, free university tuition promotes equality to a large extent by removing a financial barrier, but real equality also requires earlier support and help with living costs.

Cụm cần nhớ

- **abolished university tuition fees** — bãi bỏ học phí đại học
- **promotes equality** — thúc đẩy bình đẳng
- **removes a major financial barrier** — gỡ bỏ rào cản tài chính lớn
- **opens higher education to** — mở cửa giáo dục đại học cho
- **from modest backgrounds** — có hoàn cảnh khiêm tốn
- **fearing years of debt that they cannot repay** — sợ phải gánh nhiều năm nợ không trả nổi
- **regardless of their abilities** — bất kể năng lực
- **ability, rather than family income, decides who studies** — năng lực chứ không phải thu nhập gia đình quyết định ai được học
- **strengthens social mobility** — củng cố dịch chuyển xã hội
- **without risking heavy debt** — không phải mạo hiểm nợ nặng
- **widening the pool of skilled graduates** — mở rộng nguồn cử nhân có kỹ năng
- **raises productivity** — nâng năng suất
- **has limits** — có giới hạn
- **Taxpayers must fund it** — người nộp thuế phải tài trợ
- **support for living costs** — hỗ trợ chi phí sinh hoạt
- **investment in early schooling** — đầu tư vào giáo dục sớm

#270 Extent · 260 từ · AI 7.5 (chấm chéo 7.5)

Some argue that tuition fees limit access to higher education. To what extent do you agree?

As tuition fees rise in many countries, some people argue that they prevent talented students from attending university. I largely agree, since fees discourage young people from low-income families and burden others with debt, although they are not the only barrier.

To begin with, high fees place a heavy financial burden on students and their families. Tuition, accommodation and living expenses can consume a family's savings, and young people from modest backgrounds may decide not to apply at all, fearing years of debt that they cannot repay. Others choose cheaper courses or universities near home, regardless of their talents. As a result, ability alone does not decide who studies, and society loses the potential of capable students. A pupil with excellent grades whose parents cannot afford to support her, for example, may give up her place or choose a different path.

Furthermore, restricted access widens inequality. Where higher education is a privilege reserved for wealthy families, graduates are drawn disproportionately from the same social groups, which reduces social mobility and weakens the economy's supply of skilled workers. However, fees are not the only obstacle. Poor school results, lack of information and low expectations also keep some students out, and universities need funding from somewhere. Governments can reduce the barrier by offering grants, scholarships and loans repaid only when graduates earn above a certain income, so that cost is not the deciding factor for capable students.

In conclusion, I agree to a large extent that tuition fees limit access to higher education, but access can be protected through well-designed financial support.

Cụm cần nhớ

- **prevent talented students from attending university** — ngăn sinh viên tài năng vào đại học
- **burden others with debt** — đè gánh nợ lên người khác
- **not the only barrier** — không phải rào cản duy nhất
- **a heavy financial burden** — gánh nặng tài chính lớn
- **consume a family's savings** — ngốn hết tiền tiết kiệm của gia đình
- **from modest backgrounds** — có hoàn cảnh khiêm tốn
- **fearing years of debt that they cannot repay** — sợ phải gánh nhiều năm nợ không trả nổi
- **cheaper courses or universities near home** — khoá học rẻ hơn hoặc trường gần nhà
- **society loses the potential of capable students** — xã hội mất tiềm năng của sinh viên giỏi
- **give up her place** — từ bỏ suất học
- **restricted access widens inequality** — hạn chế tiếp cận làm bất bình đẳng sâu thêm
- **a privilege reserved for wealthy families** — đặc quyền chỉ dành cho gia đình giàu
- **drawn disproportionately from the same social groups** — chủ yếu đến từ cùng nhóm xã hội
- **social mobility** — dịch chuyển xã hội
- **weakens the economy's supply of skilled workers** — làm yếu nguồn lao động có tay nghề của nền kinh tế
- **lack of information and low expectations** — thiếu thông tin và kỳ vọng thấp
- **loans repaid only when graduates earn above a certain income** — khoản vay chỉ phải trả khi người tốt nghiệp có thu nhập trên một mức nhất định
- **the deciding factor** — yếu tố quyết định
- **limit access to higher education** — hạn chế tiếp cận giáo dục đại học
- **well-designed financial support** — hỗ trợ tài chính được thiết kế tốt

#299 Extent · 280 từ · AI 8.0 (chấm chéo 8.0)

To what extent should schools teach crime prevention and civic responsibility? Give reasons for your answer.

Crime and social conflict affect communities everywhere, and some people argue that schools can help to prevent them. I largely agree that schools should teach crime prevention and civic responsibility, since early education is more effective than punishment and builds citizens who contribute to society, although the approach must be age-appropriate.

To begin with, teaching young people about the consequences of crime helps to prevent it. Lessons on topics such as peer pressure, drug misuse, online fraud and cyberbullying give pupils the knowledge and confidence to resist risky situations, and talks by police officers or former offenders can make the consequences vivid. Prevention is also far cheaper than dealing with offences after they occur, since each young person who avoids crime saves public money on policing and prisons. A teenager who has learned how online scams work, for example, is far less likely to become a victim or an accomplice.

Furthermore, civic education develops responsible citizens. Pupils who learn how local government works, why voting matters and how to volunteer are more likely to take part in community life as adults, and activities such as clean-up days or school councils give them practical experience of shared responsibility. Educated individuals are statistically more inclined to avoid criminal behaviour, which ultimately yields safer communities. However, lessons should be age-appropriate and avoid frightening young children, and schools cannot replace families or social services. They should therefore form one part of a wider strategy rather than the whole solution.

In conclusion, I believe that schools should teach crime prevention and civic responsibility to a large extent because prevention is effective and affordable, as long as lessons are realistic and part of a wider approach.

Cụm cần nhớ

- **social conflict** — xung đột xã hội
- **crime prevention and civic responsibility** — phòng chống tội phạm và trách nhiệm công dân
- **more effective than punishment** — hiệu quả hơn hình phạt
- **contribute to society** — đóng góp cho xã hội
- **age-appropriate** — phù hợp lứa tuổi
- **the consequences of crime** — hậu quả của tội phạm
- **peer pressure** — áp lực bạn bè
- **drug misuse** — lạm dụng ma tuý
- **online fraud** — lừa đảo trực tuyến
- **resist risky situations** — chống lại tình huống rủi ro
- **far cheaper than dealing with offences** — rẻ hơn nhiều so với xử lý tội phạm
- **policing** — công tác cảnh sát
- **a victim or an accomplice** — nạn nhân hoặc kẻ tiếp tay
- **responsible citizens** — công dân có trách nhiệm
- **how local government works** — chính quyền địa phương vận hành ra sao
- **take part in community life** — tham gia đời sống cộng đồng
- **school councils** — hội đồng học sinh
- **safer communities** — cộng đồng an toàn hơn
- **part of a wider strategy** — một phần của chiến lược rộng hơn

#308 Extent · 276 từ · AI 8.0 (chấm chéo 8.0)

To what extent should financial literacy be taught in schools? Give reasons for your answer.

Many young adults leave school able to solve equations but unsure how to budget, save or borrow wisely. I largely agree that financial literacy should be taught in schools, since it protects young people from costly mistakes and builds habits that benefit them for life, provided that it is integrated sensibly into existing lessons.

To begin with, understanding money helps people to avoid debt and exploitation. Credit cards, student loans, mobile payment apps and online lending all make borrowing easy, but the interest, fees and long-term consequences are often hard to understand. Pupils who learn how interest works and how to compare offers are less likely to be misled by aggressive advertising or to fall into unmanageable debt. A graduate who understands compound interest, for example, will think carefully before relying on a credit card to cover everyday expenses.

Furthermore, early lessons in budgeting and saving shape lifelong habits. Children who practise planning a monthly budget, setting savings goals and distinguishing needs from wants are more likely to build financial security as adults, which reduces stress and lessens dependence on welfare. Financial confidence also supports wider goals such as buying a home or starting a business. However, schools need not create a new subject: the skill is best developed within existing lessons such as mathematics and citizenship, using realistic examples, so that the timetable is not overloaded. Teachers should also receive proper training, as poorly taught lessons may create false confidence rather than genuine understanding.

In conclusion, I believe that financial literacy deserves a place in the curriculum because it helps pupils avoid debt and build secure futures, provided that it is woven into existing subjects.

Cụm cần nhớ

- **budget, save or borrow wisely** — lập ngân sách, tiết kiệm hay vay mượn khôn ngoan
- **financial literacy** — kiến thức tài chính
- **costly mistakes** — sai lầm đắt giá
- **integrated sensibly into** — được tích hợp hợp lý vào
- **avoid debt and exploitation** — tránh nợ nần và bị lợi dụng
- **make borrowing easy** — khiến việc vay dễ dàng
- **interest, fees and long-term consequences** — lãi, phí và hậu quả dài hạn
- **compare offers** — so sánh các ưu đãi
- **less likely to be misled by aggressive advertising** — ít bị quảng cáo hung hăng đánh lừa
- **unmanageable debt** — nợ không thể xoay xở
- **compound interest** — lãi kép
- **cover everyday expenses** — chi trả sinh hoạt hằng ngày
- **distinguishing needs from wants** — phân biệt nhu cầu với mong muốn
- **build financial security** — xây dựng an ninh tài chính
- **lessens dependence on welfare** — giảm phụ thuộc vào trợ cấp
- **false confidence rather than genuine understanding** — sự tự tin sai lầm thay vì hiểu biết thật
- **deserves a place in** — xứng đáng có vị trí trong

#315 Extent · 270 từ · AI 8.0 (chấm chéo 8.0)

How far do you think personalized learning will change schooling in the next 20 years? Support your answer with reasons.

Adaptive software, online platforms and data analysis are already beginning to tailor lessons to individual pupils. I believe that personalised learning will change schooling to a large extent over the next two decades, although teachers will remain at its centre.

First and foremost, technology is making it practical to adapt teaching to each learner. In a crowded classroom, a teacher rarely has time to adjust the pace for every pupil, whereas adaptive software can identify a student's weaknesses and provide targeted practice at once. As costs fall and the software improves, such tools are likely to become standard in most schools, so that pupils progress according to understanding rather than age or class schedule. A pupil who repeatedly makes the same grammatical error, for instance, can receive tailored exercises the same day instead of waiting weeks for feedback.

In addition, personalised learning will reshape the role of teachers and the structure of lessons. Freed from repetitive marking, teachers will be able to devote more attention to discussion, mentoring and pupils who need extra support, and assessment will increasingly track progress continuously instead of relying on a single final examination. However, change will be limited by cost, data privacy and the need for human guidance. Schools in poorer regions may lack devices and connectivity, and young children still need the encouragement and social interaction that only people provide. Technology will therefore reshape schooling without replacing its human core.

In conclusion, personalised learning is likely to transform how pupils progress and how teachers spend their time, but its impact will depend on investment and on keeping teachers at the heart of education.

Cụm cần nhớ

- **adaptive software** — phần mềm thích ứng
- **tailor lessons to individual pupils** — điều chỉnh bài học cho từng học sinh
- **personalised learning** — học tập cá nhân hoá
- **change schooling to a large extent** — thay đổi nền giáo dục ở mức độ lớn
- **remain at its centre** — vẫn ở vị trí trung tâm
- **practical to adapt teaching to each learner** — khả thi để điều chỉnh việc dạy theo từng người học
- **adjust the pace** — điều chỉnh tốc độ
- **targeted practice** — bài luyện tập có trọng tâm
- **become standard in most schools** — trở thành tiêu chuẩn ở hầu hết trường
- **progress according to understanding rather than age or class schedule** — tiến bộ theo mức hiểu chứ không theo tuổi hay lịch lớp
- **tailored exercises** — bài tập được thiết kế riêng
- **waiting weeks for feedback** — chờ hàng tuần để có phản hồi
- **reshape the role of teachers** — định hình lại vai trò giáo viên
- **freed from repetitive marking** — được giải phóng khỏi việc chấm bài lặp đi lặp lại
- **devote more attention to** — dành nhiều sự chú ý hơn cho
- **track progress continuously** — theo dõi tiến bộ liên tục
- **data privacy** — quyền riêng tư dữ liệu
- **lack devices and connectivity** — thiếu thiết bị và kết nối
- **social interaction that only people provide** — tương tác xã hội mà chỉ con người mang lại
- **reshape schooling without replacing its human core** — định hình lại trường học mà không thay thế phần cốt lõi là con người

#335 Extent · 271 từ · AI 8.0 (chấm chéo 8.0)

How far do you think remote learning will remain common after the pandemic? Support your answer with reasons.

Remote learning expanded dramatically during the pandemic, and many people now wonder whether it will survive the return to normal life. I believe that it will remain common to a considerable extent, mainly as part of a blended approach, because it is flexible and cost-effective but cannot replace classroom teaching for everyone.

To begin with, schools, universities and families have invested in the platforms, devices and skills needed for online study, and the experience has shown how much convenience it offers. Students can attend lessons from any location, replay recorded explanations and study around jobs or family responsibilities, which is particularly valuable for adults and for people who live far from a campus. Institutions also save on buildings and staff, so many will keep online options to reach more learners at lower cost. A university that can enrol part-time students from other regions without building new lecture halls, for example, has a strong reason to keep its online courses.

Furthermore, employers and learners increasingly value flexibility, which makes remote study a natural fit with modern working patterns. Short online courses allow professionals to update their skills without leaving their jobs. However, the extent of remote learning will be limited. Young children need the supervision, discipline and social contact of a classroom, practical subjects such as chemistry or nursing require laboratories and equipment, and families without reliable internet cannot benefit equally. These limits mean that remote learning will supplement face-to-face teaching rather than dominate it.

In conclusion, remote learning will remain common as a flexible complement to classrooms, but face-to-face teaching will continue to be essential, especially for younger and practical learners.

Cụm cần nhớ

- **Remote learning** — học từ xa
- **expanded dramatically** — mở rộng mạnh mẽ
- **survive the return to normal life** — tồn tại sau khi cuộc sống trở lại bình thường
- **a blended approach** — cách tiếp cận kết hợp
- **flexible and cost-effective** — linh hoạt và tiết kiệm chi phí
- **replace classroom teaching** — thay thế việc dạy trên lớp
- **invested in the platforms, devices and skills** — đầu tư vào nền tảng, thiết bị và kỹ năng
- **how much convenience it offers** — mang lại bao nhiêu sự tiện lợi
- **from any location** — từ bất kỳ địa điểm nào
- **replay recorded explanations** — xem lại bài giảng đã ghi
- **family responsibilities** — trách nhiệm gia đình
- **live far from a campus** — sống xa khuôn viên
- **reach more learners at lower cost** — tiếp cận nhiều người học hơn với chi phí thấp hơn
- **a natural fit with modern working patterns** — phù hợp tự nhiên với cách làm việc hiện đại
- **update their skills without leaving their jobs** — cập nhật kỹ năng mà không nghỉ việc
- **reliable internet** — internet ổn định
- **supplement face-to-face teaching rather than dominate it** — bổ sung chứ không chi phối việc dạy trực tiếp
- **a flexible complement to classrooms** — phần bổ trợ linh hoạt cho lớp học

How far do you think micro-credentials will change higher education in the next 20 years? Support your answer with reasons.

Micro-credentials, short and focused certificates that prove a specific skill, have grown quickly alongside online platforms. I believe that they will change higher education considerably over the next two decades, although traditional degrees will not disappear.

First and foremost, micro-credentials fit a labour market in which skills change rapidly. Technological change means that few people can rely on a single set of skills for an entire career, so workers need to update their knowledge regularly. A short course in data analysis or project management is quicker and cheaper than a full degree, and employers can see exactly what it certifies. Universities that offer such courses will attract working adults who cannot spend three years on campus. A marketing assistant who completes a short course in data analytics, for example, may qualify for a promotion within months.

In addition, micro-credentials will make higher education more flexible and personalised. Learners will be able to combine short courses from different institutions into a tailored programme, gradually building towards a recognised qualification, and this will push universities to compete on quality and relevance. However, several factors will limit the change. Regulated professions such as medicine and law will still require full degrees, and a degree provides broad analytical training that a collection of short courses may not. Employers also need to trust the quality of each credential. Micro-credentials will therefore supplement degrees rather than replace them.

In conclusion, micro-credentials are likely to reshape higher education by promoting flexible, continuous learning, but degrees will remain important for professions and for broad academic development.

Cụm cần nhớ

- **short and focused certificates** — chứng chỉ ngắn, tập trung
- **prove a specific skill** — chứng minh một kỹ năng cụ thể
- **change higher education considerably** — thay đổi giáo dục đại học đáng kể
- **fit a labour market in which skills change rapidly** — phù hợp thị trường lao động mà kỹ năng thay đổi nhanh
- **rely on a single set of skills for an entire career** — dựa vào một bộ kỹ năng cả đời
- **update their knowledge regularly** — cập nhật kiến thức thường xuyên
- **quicker and cheaper than a full degree** — nhanh và rẻ hơn bằng cấp đầy đủ
- **exactly what it certifies** — chính xác nó chứng nhận điều gì
- **working adults** — người lao động trưởng thành
- **qualify for a promotion** — đủ điều kiện thăng chức
- **more flexible and personalised** — linh hoạt và cá nhân hoá hơn
- **compete on quality and relevance** — cạnh tranh về chất lượng và độ phù hợp
- **regulated professions** — ngành nghề có quản lý
- **broad analytical training** — đào tạo phân tích rộng
- **supplement degrees rather than replace them** — bổ sung chứ không thay thế bằng cấp
- **continuous learning** — học tập liên tục

#362 Extent · 269 từ · AI 8.0 (chấm chéo 8.0)

To what extent should students be involved in school governance? Give reasons for your answer.

School decisions about rules, facilities and activities have traditionally been made by adults alone. I largely agree that students should be involved in governing their schools, since it develops responsibility and democratic skills, although they should not control every decision.

To begin with, taking part in decision-making teaches responsibility and democratic skills. Pupils who sit on school councils learn to listen to different views, negotiate compromises and take responsibility for the results, abilities that are valuable in work and in civic life. They also understand how real decisions involve limited budgets and competing priorities, which makes them more realistic and less inclined to simply complain. A student representative who helps to design a recycling scheme, for example, learns to present a proposal, gather support and manage a small project.

Furthermore, student involvement improves decisions and school life. Pupils understand daily problems, such as overcrowded corridors, bullying in unsupervised areas or irrelevant lessons, better than adults who are not present, so their suggestions can lead to practical solutions. When students feel heard, they also develop a stronger sense of belonging and are more likely to respect the rules they helped to shape. Nevertheless, involvement must have limits. Matters such as safeguarding, staff appointments and the core curriculum require professional expertise and legal responsibility, so adults should keep the final say. Student voice works best as consultation and shared decision-making on appropriate issues, with clear explanations whenever a suggestion cannot be accepted.

In conclusion, students should be involved in school governance to a large extent, because it builds responsibility and produces better decisions, provided that adults retain authority over professional matters.

Cụm cần nhớ

- **made by adults alone** — chỉ do người lớn quyết
- **democratic skills** — kỹ năng dân chủ
- **decision-making** — ra quyết định
- **school councils** — hội đồng học sinh
- **listen to different views, negotiate compromises and take responsibility for the results** — lắng nghe, thương lượng thoả hiệp và chịu trách nhiệm về kết quả
- **limited budgets and competing priorities** — ngân sách hạn chế và ưu tiên cạnh tranh
- **inclined to simply complain** — dễ chỉ biết phàn nàn
- **present a proposal** — trình bày đề xuất
- **gather support** — tập hợp sự ủng hộ
- **daily problems** — vấn đề hằng ngày
- **practical solutions** — giải pháp thực tế
- **feel heard** — cảm thấy được lắng nghe
- **a stronger sense of belonging** — cảm giác thuộc về mạnh hơn
- **respect the rules they helped to shape** — tôn trọng quy tắc mà mình góp phần tạo ra
- **safeguarding** — bảo vệ học sinh
- **adults should keep the final say** — người lớn nên giữ quyền quyết định cuối cùng
- **student voice** — tiếng nói của học sinh
- **school governance** — quản trị nhà trường

#402 Extent · 261 từ · AI 8.0 (chấm chéo 8.0)

To what extent should cultural diversity be promoted in schools? Give reasons for your answer.

Modern classrooms often include children from many cultural backgrounds. I largely agree that schools should actively promote cultural diversity, since it reduces prejudice and helps every pupil to feel valued, although it must be done sincerely rather than symbolically.

To begin with, promoting diversity broadens pupils' horizons and weakens prejudice. When schools celebrate different languages, festivals and histories, children learn to appreciate traditions other than their own, and they are less likely to rely on stereotypes. In a globalised world, this understanding is also a practical skill, since graduates are likely to work with colleagues and clients from many countries, which gives them a clear advantage in a competitive labour market. A school that invites parents to share cooking and stories from their home countries, for example, helps pupils to see differences as interesting instead of threatening.

Furthermore, recognising diversity helps minority pupils to feel that they belong. Children who see their language, religion and history respected in the curriculum are more confident and engaged, which improves attendance and results, whereas those who feel invisible may withdraw or face bullying. A sense of belonging also strengthens cooperation across groups. However, the promotion of diversity should not be tokenistic, such as a single international day each year. It needs to be reflected in teaching materials, staff training and everyday practice, and it must emphasise shared values alongside differences so that all pupils feel part of one community.

In conclusion, schools should promote cultural diversity to a large extent because it builds understanding and belonging, provided that the effort is genuine and consistent.

Cụm cần nhớ

- **cultural backgrounds** — nền tảng văn hoá
- **cultural diversity** — đa dạng văn hoá
- **feel valued** — cảm thấy được trân trọng
- **sincerely rather than symbolically** — chân thành thay vì hình thức
- **broadens pupils' horizons** — mở rộng tầm nhìn học sinh
- **weakens prejudice** — làm giảm định kiến
- **celebrate different languages, festivals and histories** — tôn vinh ngôn ngữ, lễ hội và lịch sử khác nhau
- **appreciate traditions other than their own** — trân trọng những truyền thống khác với của mình
- **rely on stereotypes** — dựa vào khuôn mẫu
- **a globalised world** — thế giới toàn cầu hoá
- **clients from many countries** — khách hàng từ nhiều nước
- **a clear advantage in a competitive labour market** — lợi thế rõ rệt trên thị trường lao động cạnh tranh
- **see differences as interesting instead of threatening** — coi khác biệt là thú vị thay vì đáng sợ
- **minority pupils** — học sinh thiểu số
- **feel that they belong** — cảm thấy mình thuộc về
- **respected in the curriculum** — được tôn trọng trong chương trình
- **feel invisible** — cảm thấy vô hình
- **withdraw or face bullying** — thu mình hoặc bị bắt nạt
- **should not be tokenistic** — không được làm cho có lệ
- **shared values alongside differences** — giá trị chung bên cạnh khác biệt
- **genuine and consistent** — chân thật và nhất quán

#475 Extent · 258 từ · AI 8.0 (chấm chéo 7.5)

How far do you think AI tutors will change education in the next 20 years? Support your answer with reasons.

AI tutors, programs that can explain topics, answer questions and set exercises at any hour, are improving rapidly. I believe that they will change education to a large extent over the next two decades, although human teachers will remain essential.

To begin with, AI tutors can give every learner individual attention that classrooms cannot. In a crowded classroom, a teacher rarely has time to adjust the pace for every child, whereas an AI system can identify a student's weaknesses, explain a concept in several ways and provide targeted practice immediately. Because such programs are available at any hour, learners no longer need to wait for the next lesson to get help. A pupil who is stuck on algebra at ten o'clock in the evening, for instance, can receive a patient explanation at once.

In addition, AI tutors will make good tutoring far cheaper and more widely available. Private tuition is expensive, so wealthy families have long enjoyed an advantage, whereas an AI tutor can reach pupils in remote villages or overcrowded schools at a fraction of the cost. Teachers, freed from repetitive marking and basic explanations, will be able to focus on discussion, creativity and emotional support. Nevertheless, the change will have limits. AI systems sometimes produce incorrect answers, raise privacy concerns and may encourage learners to depend on them instead of thinking independently, so human oversight will remain necessary.

In conclusion, AI tutors are likely to transform how students receive help and how teachers use their time, but their benefits depend on careful supervision and equal access.

Cụm cần nhớ

- **AI tutors** — gia sư AI
- **at any hour** — vào bất kỳ giờ nào
- **improving rapidly** — đang cải thiện nhanh
- **remain essential** — vẫn thiết yếu
- **give every learner individual attention** — dành cho mỗi người học sự chú ý riêng
- **adjust the pace** — điều chỉnh tốc độ
- **explain a concept in several ways** — giải thích khái niệm bằng nhiều cách
- **targeted practice** — bài luyện tập có trọng tâm
- **available at any hour** — có sẵn bất cứ giờ nào
- **stuck on algebra** — bị kẹt ở đại số
- **a patient explanation** — lời giải thích kiên nhẫn
- **far cheaper and more widely available** — rẻ hơn và phổ biến hơn nhiều
- **Private tuition** — gia sư riêng
- **enjoyed an advantage** — hưởng lợi thế
- **reach pupils in remote villages** — tiếp cận học sinh ở làng xa
- **at a fraction of the cost** — với một phần nhỏ chi phí
- **freed from repetitive marking** — được giải phóng khỏi việc chấm bài lặp đi lặp lại
- **basic explanations** — giải thích cơ bản
- **emotional support** — hỗ trợ cảm xúc
- **incorrect answers** — câu trả lời sai
- **raise privacy concerns** — gây lo ngại về quyền riêng tư
- **depend on them instead of thinking independently** — phụ thuộc thay vì tự suy nghĩ
- **human oversight** — sự giám sát của con người
- **careful supervision and equal access** — giám sát cẩn thận và tiếp cận bình đẳng

Advantages / Disadvantages

#13 Advantages / Disadvantages · 255 từ · AI 8.0 (chấm chéo 8.0)

Do the advantages of online learning outweigh the disadvantages? Give reasons and examples.

Online learning has expanded rapidly over the past decade, and many students now follow entire degrees through a screen. Although it has certain drawbacks, I believe that its benefits clearly outweigh them.

On the positive side, online learning makes education far more flexible and affordable. Students can attend lessons from any location, replay difficult explanations and arrange their studies around jobs or family responsibilities. In addition, learners save on commuting, accommodation and printed textbooks, while institutions save on buildings and staff, so fees can be kept lower. As a result, people who might otherwise be excluded, such as rural residents and working parents, are able to gain qualifications. A nurse who studies for a master's degree in the evenings, for instance, can improve her career prospects without giving up her income.

On the negative side, online study carries the risk of distraction and reduced human contact. Devices offer endless temptations such as games and social media, and learners who study alone miss the encouragement, discipline and immediate feedback that a teacher provides in person. Furthermore, families without a reliable internet connection or a suitable device may fall behind, which could deepen existing inequalities. Nevertheless, these problems are far from insurmountable. Schools can arrange live sessions, regular check-ins and loan schemes for laptops, and learners can develop self-discipline through structured timetables.

In conclusion, despite the risks of distraction and unequal access, online learning is, on balance, more beneficial than harmful, thanks to its flexibility and lower cost. With proper support, its drawbacks can largely be overcome.

Cụm cần nhớ

- **expanded rapidly** — phát triển nhanh chóng
- **clearly outweigh** — rõ ràng vượt trội hơn
- **from any location** — từ bất kỳ địa điểm nào
- **arrange their studies around** — sắp xếp việc học quanh...
- **family responsibilities** — trách nhiệm gia đình
- **save on commuting, accommodation and printed textbooks** — tiết kiệm tiền đi lại, chỗ ở và sách in
- **fees can be kept lower** — có thể giữ học phí thấp hơn
- **might otherwise be excluded** — có thể đã bị loại trừ
- **without giving up her income** — mà không phải bỏ thu nhập
- **carries the risk of distraction and reduced human contact** — tiềm ẩn nguy cơ xao nhãng và ít tiếp xúc trực tiếp
- **endless temptations such as games and social media** — vô số cám dỗ như trò chơi và mạng xã hội
- **miss the encouragement** — thiếu sự động viên
- **immediate feedback** — phản hồi tức thì
- **a reliable internet connection** — kết nối internet ổn định
- **fall behind** — bị tụt lại phía sau
- **deepen existing inequalities** — làm sâu sắc thêm bất bình đẳng sẵn có
- **these problems are far from insurmountable** — những vấn đề này hoàn toàn có thể vượt qua
- **loan schemes for laptops** — chương trình cho mượn laptop
- **self-discipline** — tính tự kỷ luật
- **structured timetables** — thời gian biểu có cấu trúc
- **proper support** — sự hỗ trợ đúng mức
- **can largely be overcome** — phần lớn có thể khắc phục

#59 Advantages / Disadvantages · 282 từ · AI 8.0 (chấm chéo 7.5)

Do the advantages of studying abroad outweigh the disadvantages? Give reasons and examples.

Increasing numbers of students now choose to complete part or all of their degree overseas. Although studying abroad involves financial and emotional challenges, I believe that its advantages outweigh them.

On the positive side, studying abroad broadens students' horizons and improves their employability. Living in another country immerses them in a foreign language every day, so their fluency develops far more quickly than it would in a classroom at home. They also learn to adapt to unfamiliar customs, work with people from different backgrounds and solve everyday problems independently, qualities that multinational employers value highly. Such confidence is hard to acquire in a lecture hall at home. In addition, the friendships and professional networks formed overseas often lead to opportunities later in life. A graduate who is fluent in two languages and has lived abroad, for example, may apply for positions in several countries, which multiplies her career options.

On the negative side, studying overseas places a heavy burden on individuals, both financially and emotionally. Tuition, accommodation and living expenses can consume a family's savings, while homesickness and unfamiliar surroundings leave some students isolated and struggling. Consequently, those who cannot cope may return with debts and disappointing results. Nevertheless, these difficulties can be reduced. Many universities offer scholarships, part-time work permits and counselling services for international students, and those who choose their destination carefully and plan their budget in advance are far better prepared to cope. Careful research into courses, living costs and available support before departure also reduces unpleasant surprises.

In conclusion, despite the high costs and the emotional strain, studying abroad is, on balance, more beneficial than harmful, thanks to the language skills, independence and career opportunities that it offers.

Cụm cần nhớ

- **complete part or all of their degree** — hoàn thành một phần hoặc toàn bộ bằng cấp
- **financial and emotional challenges** — thách thức về tài chính và tinh thần
- **broadens students' horizons and improves their employability** — mở rộng tầm nhìn và tăng khả năng có việc làm
- **immerses them in a foreign language every day** — đặt họ vào môi trường ngoại ngữ hằng ngày
- **fluency develops far more quickly** — độ trôi chảy phát triển nhanh hơn nhiều
- **adapt to unfamiliar customs** — thích nghi với phong tục lạ
- **work with people from different backgrounds** — làm việc với người có xuất thân khác nhau
- **multinational employers value highly** — nhà tuyển dụng đa quốc gia đánh giá cao
- **professional networks** — mạng lưới quan hệ nghề nghiệp
- **multiplies her career options** — nhân lên cơ hội nghề nghiệp
- **a heavy burden on** — gánh nặng lớn đối với
- **consume a family's savings** — ngốn hết tiền tiết kiệm của gia đình
- **homesickness and unfamiliar surroundings leave some students isolated and struggling** — nhớ nhà và môi trường lạ khiến một số sinh viên cô lập, vất vả
- **return with debts** — trở về với khoản nợ
- **offer scholarships, part-time work permits and counselling services** — cung cấp học bổng, giấy phép làm thêm và dịch vụ tư vấn
- **plan their budget in advance** — lên ngân sách trước
- **unpleasant surprises** — bất ngờ khó chịu

#119 Advantages / Disadvantages · 262 từ · AI 8.0 (chấm chéo 8.0)

Do the advantages of studying multiple languages outweigh the disadvantages? Give reasons and examples.

As globalisation brings people closer together, more and more students learn two or three foreign languages alongside their mother tongue. Although this requires considerable time and effort, I believe that the advantages outweigh the disadvantages.

On the positive side, studying several languages broadens career prospects and intellectual abilities. Multilingual graduates are able to work in international companies, deal directly with clients abroad and apply for positions in several countries, which gives them a clear advantage in a competitive labour market. Beyond employability, switching between languages exercises memory and attention, and learners often develop a deeper understanding of how language itself works, which makes each new language easier to acquire. They also gain access to literature, films and cultures in their original form, which promotes open-mindedness. For example, a student who speaks Spanish and French can read news and literature from dozens of countries without relying on translations.

On the negative side, mastering several languages demands a great deal of time and effort. Learners must spend hours on vocabulary and grammar, which may reduce the time available for other subjects, and confusion between similar languages is common. Moreover, adding language classes risks overloading a timetable that is already full. Nevertheless, these difficulties are manageable. Starting at primary level, when children absorb sounds and structures easily, spreads the workload over many years, and modern apps and online conversation partners make practice more flexible and enjoyable.

In conclusion, despite the heavy workload, learning several languages is, on balance, more beneficial than harmful, thanks to the career opportunities, mental agility and cultural understanding that it brings.

Cụm cần nhớ

- **As globalisation brings people closer together** — khi toàn cầu hoá kéo mọi người lại gần nhau
- **mother tongue** — tiếng mẹ đẻ
- **broadens career prospects** — mở rộng triển vọng nghề nghiệp
- **multilingual graduates** — sinh viên tốt nghiệp biết nhiều ngôn ngữ
- **deal directly with clients** — làm việc trực tiếp với khách hàng
- **a clear advantage in a competitive labour market** — lợi thế rõ rệt trên thị trường lao động cạnh tranh
- **exercises memory and attention** — rèn luyện trí nhớ và sự chú ý
- **a deeper understanding of how language itself works** — hiểu sâu hơn cách bản thân ngôn ngữ vận hành
- **gain access to literature, films and cultures** — tiếp cận văn học, phim ảnh và văn hoá
- **in their original form** — ở dạng gốc (không qua bản dịch)
- **promotes open-mindedness** — thúc đẩy sự cởi mở
- **without relying on translations** — không phải dựa vào bản dịch
- **mastering several languages** — thành thạo nhiều ngôn ngữ
- **risks overloading a timetable that is already full** — có nguy cơ làm quá tải thời khoá biểu vốn đã dày
- **children absorb sounds and structures easily** — trẻ nhỏ tiếp thu âm thanh và cấu trúc rất dễ
- **spreads the workload over many years** — dàn trải khối lượng việc qua nhiều năm
- **mental agility** — sự nhanh nhạy trí tuệ
- **cultural understanding** — hiểu biết văn hoá

#139 Advantages / Disadvantages · 270 từ · AI 7.5 (chấm chéo 7.5)

Do the advantages of homeschooling outweigh the disadvantages? Give reasons and examples.

More families are choosing to educate their children at home, and the practice raises strong opinions. Although homeschooling offers some benefits, I believe that its disadvantages outweigh them.

On the positive side, homeschooling allows teaching to be tailored to the needs of each child. In a crowded classroom, a teacher rarely has time to adjust the pace for every pupil, whereas a parent working with one or two children can identify weaknesses and provide targeted practice at once. The timetable is also flexible, so lessons can follow the child's interests and families can avoid problems such as bullying. A child who is passionate about astronomy, for example, can spend extra weeks exploring the subject instead of moving on after a single lesson.

On the negative side, however, homeschooling risks leaving children socially isolated and academically limited. School is where children learn to make friends, resolve disagreements and work in groups, and studying mostly at home limits these everyday interactions. Few parents are also qualified to teach every subject to a high standard, and laboratories, sports grounds and specialist equipment are rarely available at home, so pupils may leave with gaps in their knowledge that are difficult to repair later. Some families try to compensate through clubs and online classes, but these require time, money and organisation that many parents lack. A child taught entirely at home, for instance, may find a first job interview or group project unusually daunting.

In conclusion, although homeschooling provides personalised and flexible learning, its risks of social isolation and limited expertise are more serious, which is why I believe that its disadvantages outweigh its advantages.

Cụm cần nhớ

- **educate their children at home** — dạy con tại nhà
- **raises strong opinions** — gây ra ý kiến mạnh mẽ
- **tailored to the needs of each child** — được điều chỉnh theo nhu cầu từng trẻ
- **adjust the pace** — điều chỉnh tốc độ
- **identify weaknesses and provide targeted practice** — chỉ ra điểm yếu và cho luyện tập đúng chỗ
- **lessons can follow the child's interests** — bài học có thể đi theo sở thích của trẻ
- **avoid problems such as bullying** — tránh các vấn đề như bắt nạt
- **passionate about astronomy** — đam mê thiên văn học
- **socially isolated and academically limited** — bị cô lập xã hội và hạn chế về học thuật
- **resolve disagreements** — giải quyết bất đồng
- **work in groups** — làm việc nhóm
- **to a high standard** — ở tiêu chuẩn cao
- **laboratories, sports grounds and specialist equipment** — phòng thí nghiệm, sân thể thao và thiết bị chuyên dụng
- **gaps in their knowledge that are difficult to repair later** — lỗ hổng kiến thức khó khắc phục về sau
- **compensate through clubs and online classes** — bù đắp bằng câu lạc bộ và lớp trực tuyến
- **unusually daunting** — khó khăn khác thường

#157 Advantages / Disadvantages · 256 từ · AI 8.0 (chấm chéo 8.0)

What are the benefits for a country that focuses on vocational training? Use examples.

Practical, job-oriented training is gaining recognition as a valuable alternative to academic study. This essay will outline two principal benefits of vocational training for a country: a skilled workforce and greater social inclusion.

First and foremost, a country that prioritises vocational training builds the skilled workforce on which a modern economy depends. Employers in sectors such as construction, healthcare, engineering and hospitality report shortages of workers with practical competencies, and trained workers can move into stable, well-paid jobs quickly. As a result, companies recruit more easily, youth unemployment falls and productivity rises. Countries with strong apprenticeship systems, such as Germany, tend to have low youth unemployment, which suggests that practical education pays off. A teenager who learns basic electrical installation, for example, may qualify for an apprenticeship at sixteen instead of drifting between short-term jobs.

In addition, vocational training promotes social inclusion. Students who struggle with written exams often thrive when they can build, repair or cook something tangible, and this success restores their confidence and reduces the risk of dropping out. Providing a respected route to employment for young people who might otherwise leave school with no qualifications narrows the gap between rich and poor, strengthens social mobility and lowers the long-term cost of welfare and crime. Furthermore, vocational courses are shorter and cheaper than degrees, so they are accessible to families on modest incomes.

To sum up, vocational training brings clear benefits to a country, above all a skilled workforce and a fairer, more inclusive society. For these reasons, it deserves sustained public support.

Cụm cần nhớ

- **job-oriented training** — đào tạo hướng nghề
- **a valuable alternative to academic study** — lựa chọn thay thế có giá trị cho học thuật
- **greater social inclusion** — hoà nhập xã hội cao hơn
- **prioritises vocational training** — ưu tiên đào tạo nghề
- **the skilled workforce on which a modern economy depends** — lực lượng lao động có kỹ năng mà nền kinh tế hiện đại cần
- **report shortages of workers** — báo cáo thiếu lao động
- **practical competencies** — năng lực thực hành
- **move into stable, well-paid jobs** — vào được những công việc ổn định, lương tốt
- **youth unemployment falls** — thất nghiệp thanh niên giảm
- **productivity rises** — năng suất tăng
- **apprenticeship systems** — hệ thống học nghề
- **pays off** — mang lại kết quả
- **drifting between short-term jobs** — trôi giữa các việc ngắn hạn
- **inclusion** — sự hoà nhập
- **thrive when they can build, repair or cook something tangible** — phát huy khi được tự tay làm, sửa hay nấu thứ gì đó hữu hình
- **restores their confidence** — khôi phục sự tự tin
- **dropping out** — bỏ học
- **a respected route to employment** — con đường vào nghề được coi trọng
- **strengthens social mobility** — củng cố dịch chuyển xã hội
- **lowers the long-term cost of welfare and crime** — giảm chi phí dài hạn cho phúc lợi và tội phạm
- **accessible to families on modest incomes** — phù hợp gia đình thu nhập khiêm tốn
- **sustained public support** — sự hỗ trợ công lâu dài

#199 Advantages / Disadvantages · 268 từ · AI 8.0 (chấm chéo 7.5)

Do the advantages of bilingual education outweigh the disadvantages? Give reasons and examples.

As migration and globalisation increase, more schools teach through two languages. Although bilingual education makes demands on teachers and pupils, I believe that its advantages outweigh its disadvantages.

On the positive side, bilingual education broadens career prospects and intellectual abilities. Bilingual graduates are able to work in international companies, deal directly with clients abroad and apply for positions in several countries, which gives them a clear advantage in a competitive labour market. Switching between languages exercises memory and attention, and learners often develop a deeper understanding of how language itself works. Because young children absorb sounds and structures easily, they can reach a high level in both languages by the time they leave school. Pupils also gain access to literature, films and cultures in their original form, which promotes open-mindedness.

On the negative side, teaching in two languages places considerable demands on teachers. Staff must prepare materials in several languages, hold advanced language qualifications and adapt lessons for pupils at very different levels, all within the same working day. Some pupils may also find it difficult to master complex subjects such as science in a second language, which risks lowering results at first. Nevertheless, these difficulties are manageable. Schools can provide training and teaching assistants, introduce the second language gradually through subjects such as art and music, and use bilingual materials to support understanding. With such support, the early challenges are temporary, whereas the benefits last for life.

In conclusion, despite the heavy demands on teachers, bilingual education is, on balance, more beneficial than harmful, thanks to the career opportunities, mental agility and cultural understanding that it brings.

Cụm cần nhớ

- **As migration and globalisation increase** — khi di cư và toàn cầu hoá gia tăng
- **bilingual education** — giáo dục song ngữ
- **makes demands on** — đặt ra yêu cầu đối với
- **broadens career prospects** — mở rộng triển vọng nghề nghiệp
- **deal directly with clients** — làm việc trực tiếp với khách hàng
- **a clear advantage in a competitive labour market** — lợi thế rõ rệt trên thị trường lao động cạnh tranh
- **exercises memory and attention** — rèn luyện trí nhớ và sự chú ý
- **a deeper understanding of how language itself works** — hiểu sâu hơn cách bản thân ngôn ngữ vận hành
- **children absorb sounds and structures easily** — trẻ nhỏ tiếp thu âm thanh và cấu trúc rất dễ
- **reach a high level in both languages** — đạt trình độ cao ở cả hai ngôn ngữ
- **gain access to literature, films and cultures** — tiếp cận văn học, phim ảnh và văn hoá
- **in their original form** — ở dạng gốc (không qua bản dịch)
- **promotes open-mindedness** — thúc đẩy sự cởi mở
- **places considerable demands on teachers** — đặt yêu cầu lớn lên giáo viên
- **prepare materials** — chuẩn bị tài liệu
- **advanced language qualifications** — bằng cấp ngôn ngữ nâng cao
- **adapt lessons for pupils at very different levels** — điều chỉnh bài cho học sinh nhiều trình độ
- **risks lowering results** — có nguy cơ làm giảm kết quả
- **introduce the second language gradually** — đưa ngôn ngữ thứ hai vào dần dần
- **temporary** — tạm thời
- **the benefits last for life** — lợi ích kéo dài cả đời
- **heavy demands on teachers** — đòi hỏi nặng nề với giáo viên
- **mental agility** — sự nhanh nhạy trí tuệ
- **cultural understanding** — hiểu biết văn hoá

#228 Advantages / Disadvantages · 264 từ · AI 7.5 (chấm chéo 7.5)

Discuss the advantages and disadvantages of standardized testing.

Standardised tests, in which all students answer the same questions under the same conditions, are used in most education systems. This essay will discuss their main advantages and disadvantages before suggesting how they should be used.

On the positive side, standardised testing provides a clear and objective measure of achievement. Because every candidate faces the same questions and marking criteria, results allow teachers, parents and employers to compare performance fairly across schools and regions, and the prospect of a test motivates many students to revise systematically. Governments can also use the results to identify schools that need extra support, which helps to keep standards consistent. A national examination, for instance, lets a university compare applicants from different regions on equal terms.

On the negative side, such tests give only a narrow picture of ability. They mainly reward memory and speed under timed conditions, while creativity, teamwork and practical skills go unmeasured, and teaching tends to drift towards test preparation instead of genuine understanding. Moreover, high-stakes tests place students under excessive pressure, and pupils whose families can afford private tutors enjoy a clear advantage over equally able classmates. As a result, scores may reflect stress and wealth as much as ability. A gifted artist or entrepreneur, for example, may leave school with unimpressive grades despite exceptional real-world potential.

In conclusion, standardised testing offers fairness and comparability, but its narrow focus and its sensitivity to pressure and family wealth are serious drawbacks. On balance, I believe that such tests should be one source of evidence among several, rather than the sole judge of a student's ability.

Cụm cần nhớ

- **answer the same questions under the same conditions** — trả lời cùng câu hỏi trong cùng điều kiện
- **a clear and objective measure** — thước đo rõ ràng, khách quan
- **marking criteria** — tiêu chí chấm điểm
- **compare performance fairly** — so sánh thành tích công bằng
- **revise systematically** — ôn tập có hệ thống
- **identify schools that need extra support** — nhận ra trường cần hỗ trợ thêm
- **keep standards consistent** — giữ chuẩn nhất quán
- **on equal terms** — trên cùng điều kiện
- **a narrow picture of ability** — bức tranh hẹp về năng lực
- **mainly reward memory and speed under timed conditions** — chủ yếu thưởng cho trí nhớ và tốc độ trong điều kiện giới hạn thời gian
- **go unmeasured** — không được đo lường
- **teaching tends to drift towards test preparation instead of genuine understanding** — việc dạy có xu hướng trượt sang luyện thi thay vì hiểu thật sự
- **high-stakes tests** — bài thi quyết định (áp lực cao)
- **place students under excessive pressure** — đặt học sinh dưới áp lực quá mức
- **pupils whose families can afford private tutors enjoy a clear advantage over equally able classmates** — học sinh có gia đình trả được gia sư có lợi thế rõ so với bạn cùng năng lực
- **reflect stress and wealth as much as ability** — phản ánh căng thẳng và tiền bạc nhiều như năng lực
- **exceptional real-world potential** — tiềm năng thực tế vượt trội
- **comparability** — khả năng so sánh
- **serious drawbacks** — nhược điểm nghiêm trọng
- **one source of evidence among several** — một nguồn bằng chứng trong số nhiều nguồn
- **the sole judge** — người phán xét duy nhất

What are the benefits for a country that focuses on technological education? Use examples.

Technological skills are becoming indispensable in almost every profession. This essay will outline two principal benefits for a country that focuses on technological education: a workforce suited to the modern economy and a stronger capacity for innovation.

First and foremost, technological education prepares young people for a world in which software underpins almost every industry. Finance, healthcare, design and even farming now rely on programs that analyse data and automate routine tasks, so employees who understand how such tools work have a clear advantage. As a result, businesses recruit qualified staff more easily, productivity rises and fewer workers are left behind when jobs are automated. Even pupils who never become engineers will be better able to use, question and adapt the technology that shapes their working lives. An accountant who can write a short script to process thousands of invoices, for example, finishes in minutes what once took days.

In addition, a strong technological education system promotes innovation and competitiveness. Educated citizens are more likely to start companies and develop new technologies, which creates jobs and attracts investment, and countries with a deep pool of engineers and programmers can compete in industries such as software, medicine and clean energy. Graduates in technology also help the public sector to improve services, from transport to healthcare. Singapore, a small country with few natural resources, is often cited as a nation that built its prosperity chiefly on the quality of its schools and universities. Because technology changes quickly, a country that teaches adaptable problem-solving skills, not just current tools, is better placed to keep pace.

To sum up, technological education brings clear benefits to a country, above all a workforce suited to modern industry and a stronger capacity for innovation. For these reasons, it deserves sustained public support.

Cụm cần nhớ

- **indispensable in almost every profession** — không thể thiếu trong hầu hết nghề
- **technological education** — giáo dục công nghệ
- **a workforce suited to the modern economy** — lực lượng lao động phù hợp nền kinh tế hiện đại
- **a stronger capacity for innovation** — năng lực đổi mới mạnh hơn
- **software underpins almost every industry** — phần mềm là nền tảng của gần như mọi ngành
- **analyse data and automate routine tasks** — phân tích dữ liệu và tự động hoá việc lặp lại
- **a clear advantage** — lợi thế rõ rệt
- **productivity rises** — năng suất tăng
- **fewer workers are left behind** — ít lao động bị bỏ lại
- **jobs are automated** — việc làm bị tự động hoá
- **use, question and adapt the technology** — sử dụng, đặt câu hỏi và điều chỉnh công nghệ
- **shapes their working lives** — định hình đời sống công việc của họ
- **finishes in minutes what once took days** — làm trong vài phút thứ từng mất nhiều ngày
- **innovation and competitiveness** — đổi mới và năng lực cạnh tranh
- **start companies and develop new technologies** — lập doanh nghiệp và phát triển công nghệ mới
- **attracts investment** — thu hút đầu tư
- **a deep pool of engineers and programmers** — nguồn kỹ sư và lập trình viên dồi dào
- **compete in industries such as** — cạnh tranh trong các ngành như
- **improve services** — cải thiện dịch vụ
- **natural resources** — tài nguyên thiên nhiên
- **built its prosperity chiefly on** — xây dựng thịnh vượng chủ yếu dựa trên
- **adaptable problem-solving skills** — kỹ năng giải quyết vấn đề thích ứng
- **keep pace** — theo kịp
- **sustained public support** — sự hỗ trợ công lâu dài

#288 Advantages / Disadvantages · 269 từ · AI 8.0 (chấm chéo 8.0)

Discuss the advantages and disadvantages of using social media for education.

Platforms such as Facebook, YouTube and WhatsApp are now part of students' daily lives, and many teachers have begun to use them for learning. This essay will discuss the main advantages and disadvantages of this trend.

On the positive side, social media makes collaboration and access to resources easier. Students can create study groups, share notes and ask questions outside class hours, while teachers can post explanations or video lessons that pupils watch at their own pace. Because these platforms are already familiar, learners often engage with them more readily than with formal systems, and communication feels quick and informal. Teachers can also reach quieter pupils, who may find it easier to ask a question in a message than in front of the whole class. During school closures, for example, many classes continued through messaging groups when other tools were unavailable.

On the negative side, social media carries the risk of distraction and misinformation. Notifications, games and entertaining videos offer endless temptations, so a student who opens a study group may end up scrolling for an hour. In addition, false claims often spread faster than corrections, and pupils who cannot check sources or spot bias may be misled. Privacy and cyberbullying are further concerns, since personal details and comments are visible to a wide audience. Without clear rules, these problems can outweigh the educational benefits.

In conclusion, social media can strengthen collaboration and widen access to learning materials, but its distractions and risks are serious. On balance, I believe that it should be used in education only in moderation, with clear guidelines, teacher supervision and lessons in evaluating information.

Cụm cần nhớ

- **part of students' daily lives** — một phần đời sống hằng ngày của học sinh
- **makes collaboration and access to resources easier** — giúp hợp tác và tiếp cận tài nguyên dễ hơn
- **create study groups, share notes and ask questions outside class hours** — lập nhóm học, chia sẻ ghi chú và hỏi bài ngoài giờ
- **at their own pace** — theo tốc độ riêng
- **engage with them more readily** — tham gia dễ dàng hơn
- **quick and informal** — nhanh chóng và thân mật
- **reach quieter pupils** — tiếp cận học sinh nhút nhát hơn
- **school closures** — trường đóng cửa
- **the risk of distraction and misinformation** — nguy cơ xao nhãng và thông tin sai lệch
- **endless temptations** — cám dỗ vô tận
- **may end up scrolling for an hour** — có thể cuối cùng lướt cả tiếng đồng hồ
- **false claims often spread faster than corrections** — tin sai thường lan nhanh hơn lời đính chính
- **privacy and cyberbullying** — quyền riêng tư và bắt nạt mạng
- **outweigh the educational benefits** — lớn hơn lợi ích giáo dục
- **in moderation** — ở mức vừa phải
- **clear guidelines** — hướng dẫn rõ ràng

#379 Advantages / Disadvantages · 272 từ · AI 8.0 (chấm chéo 8.0)

What are the benefits for a country that focuses on lifelong learning programs? Use examples.

Rapid technological change means that few people can rely on a single set of skills for an entire career. This essay will outline two key benefits for a country that focuses on lifelong learning programmes: a more adaptable workforce and a healthier, more inclusive society.

First and foremost, lifelong learning keeps the workforce adaptable. Workers must update their knowledge regularly to stay employable, and programmes that provide affordable evening courses and short online training allow them to move into new roles when old ones disappear. As a result, unemployment is lower, companies find the skills they need and productivity rises. A factory worker whose job is automated, for example, can retrain as a technician and remain in work instead of relying on benefits. A country that invests in such programmes is therefore better able to cope with economic change.

In addition, lifelong learning improves wellbeing and social inclusion. Adults who return to education gain confidence, make friends and keep their minds active, which can reduce isolation and support healthy ageing. It also offers a second chance to those who left school early or could not afford university, narrowing the gap between rich and poor and strengthening social mobility. Learners who value education tend to encourage their children to study, so the benefits pass to the next generation. Furthermore, better-educated citizens are more inclined to make healthier choices, which eases the burden on healthcare services and frees public money for other priorities.

To sum up, lifelong learning programmes bring clear benefits to a country, above all an adaptable workforce and a more inclusive, healthier society. For these reasons, they deserve sustained public support.

Cụm cần nhớ

- **Rapid technological change** — thay đổi công nghệ nhanh chóng
- **rely on a single set of skills for an entire career** — dựa vào một bộ kỹ năng cả đời
- **lifelong learning programmes** — chương trình học tập suốt đời
- **a healthier, more inclusive society** — xã hội khoẻ mạnh và hoà nhập hơn
- **lifelong learning** — học tập suốt đời
- **update their knowledge regularly** — cập nhật kiến thức thường xuyên
- **stay employable** — giữ khả năng có việc làm
- **affordable evening courses** — khoá học buổi tối giá phải chăng
- **move into new roles when old ones disappear** — chuyển sang vai trò mới khi việc cũ biến mất
- **companies find the skills they need** — doanh nghiệp tìm được kỹ năng cần
- **productivity rises** — năng suất tăng
- **retrain as a technician** — học lại thành kỹ thuật viên
- **relying on benefits** — dựa vào trợ cấp
- **cope with economic change** — đối phó với thay đổi kinh tế
- **inclusion** — sự hoà nhập
- **keep their minds active** — giữ trí óc hoạt động
- **healthy ageing** — lão hoá khoẻ mạnh
- **a second chance to those who left school early** — cơ hội lần hai cho những người bỏ học sớm
- **social mobility** — dịch chuyển xã hội
- **pass to the next generation** — truyền sang thế hệ sau
- **eases the burden on healthcare services** — giảm gánh nặng cho dịch vụ y tế
- **an adaptable workforce** — lực lượng lao động linh hoạt, thích ứng
- **sustained public support** — sự hỗ trợ công lâu dài

What are the benefits for a country that focuses on public safety education? Use examples.

Safety education ranges from road awareness to first aid and emergency preparedness. This essay will outline two principal benefits for a country that teaches public safety in schools: fewer deaths and injuries, and stronger, more resilient communities.

First and foremost, safety education saves lives and prevents injuries. Children who learn how to cross roads, swim safely, recognise fire hazards and perform basic first aid are better able to protect themselves and others, and these skills last for life. Accidents are a major cause of death and injury among young people, so even modest improvements in awareness can have a large effect. As a result, hospitals treat fewer preventable injuries, and families are spared tragedy. A pupil who knows how to give first aid, for example, may be able to help a classmate who is choking before an ambulance arrives.

In addition, safety education builds resilient and responsible communities. Pupils who practise emergency drills and learn what to do in earthquakes, floods or fires respond calmly instead of panicking, which reduces damage and the burden on emergency services. Beyond personal advancement, such education brings wider benefits to society as a whole, because children carry the knowledge home and share it with parents and neighbours. Lessons on online safety and road behaviour also encourage a sense of shared responsibility. Preparing people in advance is far cheaper than dealing with disasters after they occur, so governments that invest in safety education save public money as well as lives.

To sum up, public safety education brings clear benefits to a country, above all fewer preventable deaths and more resilient communities. For these reasons, it deserves sustained public support.

Cụm cần nhớ

- **road awareness** — ý thức an toàn đường bộ
- **first aid** — sơ cứu
- **emergency preparedness** — sẵn sàng ứng phó khẩn cấp
- **public safety** — an ninh công cộng
- **fewer deaths and injuries** — ít tử vong và thương tích hơn
- **resilient communities** — cộng đồng kiên cường
- **saves lives and prevents injuries** — cứu mạng và ngăn thương tích
- **recognise fire hazards** — nhận ra nguy cơ hoả hoạn
- **protect themselves and others** — bảo vệ mình và người khác
- **a major cause of death and injury** — nguyên nhân chính gây tử vong và thương tích
- **preventable injuries** — thương tích có thể phòng tránh
- **spared tragedy** — tránh được bi kịch
- **emergency drills** — diễn tập khẩn cấp
- **respond calmly instead of panicking** — phản ứng bình tĩnh thay vì hoảng loạn
- **reduces damage** — giảm thiệt hại
- **carry the knowledge home** — mang kiến thức về nhà
- **a sense of shared responsibility** — ý thức trách nhiệm chung
- **Preparing people in advance** — chuẩn bị cho mọi người từ trước
- **save public money as well as lives** — tiết kiệm tiền công cũng như mạng sống
- **public safety education** — giáo dục an toàn cộng đồng
- **sustained public support** — sự hỗ trợ công lâu dài

Some people prefer traditional classrooms while others prefer online learning. Discuss both views and give your opinion.

People hold different views on whether traditional classrooms provide the better learning environment or whether online learning is preferable. This essay will consider both perspectives before explaining my own opinion.

On the one hand, supporters of traditional classrooms emphasise the value of face-to-face interaction. Learning in a physical classroom fosters teamwork, shared responsibility and contact with peers who hold different viewpoints, qualities that are difficult to develop through a screen. A teacher who is present can read facial expressions, notice confusion and adjust an explanation instantly. Moreover, a fixed timetable and a dedicated learning space encourage discipline, particularly among younger children who lack the self-control to study alone. For example, pupils who complete a group project learn to negotiate disagreements rather than avoid them.

On the other hand, advocates of online learning point to its flexibility and accessibility. With a laptop and an internet connection, students can attend lessons from remote areas, revisit recorded explanations and study at times that suit their personal circumstances. This convenience widens participation, especially among working adults and people with health conditions who might otherwise be excluded. In addition, online courses are often more affordable, since learners save on travel and accommodation. Platforms such as Coursera and Khan Academy, for instance, give millions of users access to lessons at little or no cost.

In conclusion, both approaches have genuine merits. Personally, I believe that a blended model, with face-to-face teaching as its foundation and online tools as a supplement, offers the most effective approach, since it combines human interaction with flexibility.

Cụm cần nhớ

- **provide the better learning environment** — tạo môi trường học tốt hơn
- **face-to-face interaction** — tương tác trực tiếp
- **fosters teamwork** — nuôi dưỡng tinh thần đồng đội
- **hold different viewpoints** — có quan điểm khác nhau
- **read facial expressions, notice confusion and adjust an explanation instantly** — đọc nét mặt, nhận ra học sinh bối rối và điều chỉnh lời giảng ngay
- **a fixed timetable** — thời khoá biểu cố định
- **lack the self-control** — thiếu khả năng tự kiềm chế
- **negotiate disagreements** — giải quyết bất đồng
- **point to its flexibility** — nêu ra tính linh hoạt của nó
- **revisit recorded explanations** — xem lại bài giảng đã ghi hình
- **widens participation** — mở rộng sự tham gia
- **working adults** — người lao động trưởng thành
- **health conditions** — tình trạng sức khoẻ
- **might otherwise be excluded** — có thể đã bị loại trừ
- **at little or no cost** — với chi phí rất thấp hoặc miễn phí
- **genuine merits** — ưu điểm thực sự
- **a blended model, with face-to-face teaching as its foundation** — mô hình kết hợp, lấy dạy trực tiếp làm nền tảng
- **as a supplement** — như một phần bổ trợ
- **combines human interaction with flexibility** — kết hợp tương tác con người với sự linh hoạt

Is it better to focus government spending on education or on other priorities? Discuss and give your opinion.

Opinions are divided as to whether education should be the priority for public spending or whether other sectors deserve a larger share of the budget. This essay will consider both perspectives before explaining my own opinion.

On the one hand, those who put education first argue that it is the foundation of long-term national development. A well-funded school system produces graduates with the skills that modern industries require, which raises productivity, attracts investment and widens the tax base. Education also narrows the gap between rich and poor, since talented children from low-income families can progress on merit rather than family wealth. Countries that expanded access to schooling after the Second World War, such as South Korea, later enjoyed rapid economic growth.

On the other hand, critics point out that governments have limited funds and many equally urgent responsibilities. Hospitals, public transport, housing and social care all demand substantial investment, and a shortage of hospital beds or a failing road network can cost lives and damage the economy immediately. Moreover, spending more on education does not guarantee better results if money is wasted on poorly designed programmes, whereas a modest sum directed at the right area, such as healthcare for an ageing population, may bring greater benefit. A rural region with no emergency hospital, for example, has more pressing needs than new school equipment.

In conclusion, although other public services deserve adequate funding, I believe that education should come first, because a well-educated population ultimately generates the revenue and expertise that sustain every other service. Governments should, of course, continue to protect essential public services; the point is that long-term prosperity ultimately rests on the knowledge and skills of the people.

Cụm cần nhớ

- **the priority for public spending** — ưu tiên trong chi tiêu công
- **a larger share of the budget** — phần ngân sách lớn hơn
- **the foundation of long-term national development** — nền tảng của phát triển quốc gia lâu dài
- **raises productivity** — nâng năng suất
- **attracts investment** — thu hút đầu tư
- **widens the tax base** — mở rộng cơ sở thuế
- **progress on merit** — tiến lên nhờ năng lực
- **rapid economic growth** — tăng trưởng kinh tế nhanh
- **governments have limited funds and many equally urgent responsibilities** — chính phủ có ngân sách hạn hẹp và nhiều trách nhiệm cấp bách ngang nhau
- **a failing road network** — mạng lưới đường xá xuống cấp
- **does not guarantee better results** — không đảm bảo kết quả tốt hơn
- **an ageing population** — dân số già hoá
- **more pressing needs than** — có nhu cầu cấp thiết hơn
- **generates the revenue and expertise that sustain every other service** — tạo ra nguồn thu và chuyên môn nuôi sống mọi dịch vụ khác
- **long-term prosperity** — thịnh vượng lâu dài
- **rests on** — dựa trên

#198 Discuss both views · 268 từ · AI 8.0 (chấm chéo 7.5)

Some people prefer teaching methods that emphasize exams while others prefer project-based learning. Discuss both views and give your opinion.

Opinions are divided as to whether teaching should concentrate on exam preparation or whether project-based learning is the preferable method. This essay will consider both perspectives before explaining my own opinion.

On the one hand, supporters of exam-focused teaching argue that it provides clear standards and motivation. Standardised results allow teachers, parents and employers to compare performance fairly, and the prospect of an exam encourages many students to revise systematically and master essential knowledge. A syllabus built around examinations also ensures that every pupil, whatever the school, covers the same core content. In subjects such as mathematics, where each topic builds on the last, this structure prevents gaps in understanding. A national examination, for instance, lets a university compare applicants from different regions on equal terms.

On the other hand, advocates of project-based learning point out that it develops understanding and practical skills. When pupils investigate a real question, such as designing a model bridge or surveying local recycling habits, they must apply knowledge, plan their time and cooperate with others, abilities that employers value highly. Unlike memorising facts for a test, this approach encourages learners to ask questions and draw their own conclusions, which helps them to retain ideas for far longer. Moreover, interesting tasks keep reluctant learners motivated, whereas exams can cause stress. A group that builds a working model bridge, for example, learns physics far more vividly than a class that only reads about it.

In conclusion, both methods have clear merits. Personally, I believe that a balanced combination is the most sensible approach, since exams safeguard standards while projects develop deeper understanding and teamwork.

Cụm cần nhớ

- **concentrate on exam preparation** — tập trung vào ôn thi
- **clear standards and motivation** — tiêu chuẩn rõ ràng và động lực
- **compare performance fairly** — so sánh thành tích công bằng
- **revise systematically** — ôn tập có hệ thống
- **master essential knowledge** — nắm vững kiến thức thiết yếu
- **covers the same core content** — học cùng nội dung cốt lõi
- **builds on the last** — xây trên cái trước
- **prevents gaps in understanding** — ngăn lỗ hổng hiểu biết
- **on equal terms** — trên cùng điều kiện
- **apply knowledge, plan their time and cooperate with others** — vận dụng kiến thức, sắp xếp thời gian và hợp tác
- **memorising facts for a test** — học thuộc cho bài thi
- **ask questions and draw their own conclusions** — đặt câu hỏi và tự rút ra kết luận
- **keep reluctant learners motivated** — giữ động lực cho người học thiếu hứng
- **a balanced combination** — sự kết hợp cân bằng
- **safeguard standards** — bảo vệ chuẩn mực

Is it better to focus government spending on vocational education or on universities? Discuss and give your opinion.

Opinions are divided as to whether public money should favour vocational education or universities. This essay will consider both perspectives before explaining my own opinion.

On the one hand, supporters of vocational education argue that it matches the needs of the labour market. Employers in sectors such as construction, healthcare and engineering report shortages of workers with practical competencies, and pupils who gain such skills can move into stable, well-paid jobs more easily. Vocational courses are also shorter and cheaper than degrees, so each pound of public money trains more people, and they offer a route to success for pupils who struggle with purely academic study. A teenager who learns basic electrical installation, for example, may qualify for an apprenticeship at sixteen instead of drifting between short-term jobs.

On the other hand, advocates of universities point out that higher education drives research and innovation. Universities train the doctors, engineers, teachers and scientists on whom society depends, and their research produces the discoveries that create new industries and jobs. Graduates also tend to earn more and pay more tax over their working lives, so public investment returns revenue to the state. Moreover, universities teach analytical skills that remain useful when technology changes the content of jobs. A graduate engineer, for instance, can expect far wider opportunities than someone who left school without a technical qualification.

To sum up, both positions have their merits; nevertheless, I believe that a balanced allocation is wise, although vocational routes deserve extra support given the shortage of skilled workers.

Cụm cần nhớ

- **favour vocational education** — ưu tiên giáo dục nghề
- **matches the needs of the labour market** — phù hợp nhu cầu thị trường lao động
- **report shortages of workers** — báo cáo thiếu lao động
- **practical competencies** — năng lực thực hành
- **move into stable, well-paid jobs** — vào được những công việc ổn định, lương tốt
- **each pound of public money trains more people** — mỗi đồng công đào tạo được nhiều người hơn
- **a route to success** — con đường đến thành công
- **purely academic study** — học thuật thuần tuý
- **drifting between short-term jobs** — trôi giữa các việc ngắn hạn
- **drives research and innovation** — thúc đẩy nghiên cứu và đổi mới
- **on whom society depends** — những người mà xã hội dựa vào
- **create new industries and jobs** — tạo ra ngành và việc làm mới
- **pay more tax** — đóng nhiều thuế hơn
- **returns revenue to the state** — mang lại nguồn thu cho nhà nước
- **analytical skills** — kỹ năng phân tích
- **a balanced allocation** — phân bổ cân bằng
- **deserve extra support** — xứng đáng được hỗ trợ thêm
- **the shortage of skilled workers** — tình trạng thiếu lao động có tay nghề

Is it better to focus government spending on policing or on education? Discuss and give your opinion.

Opinions differ as to whether public money is better spent on policing or on education. This essay will consider both perspectives before explaining my own opinion.

On the one hand, those who favour policing argue that public safety is the foundation of everyday life. Residents who feel secure are more likely to work, invest and send their children to school, whereas high crime discourages business and drives people away. Visible, well-resourced policing can deter offences before they occur and shorten emergency response times, which may save lives. Police presence also reassures vulnerable groups such as elderly residents and shopkeepers. A neighbourhood with regular patrols, for instance, tends to experience fewer break-ins.

On the other hand, supporters of education point out that it tackles the root causes of crime. Educated individuals are statistically more inclined to find stable employment and less prone to criminal behaviour, which eases the burden on police, courts and prisons. Quality schooling also gives young people from deprived areas alternatives to gangs and illegal work. Educated citizens also vote, pay taxes and take part in community life. In the long term, therefore, spending on schools reduces the need to spend on enforcement. A community in which most residents have completed secondary school, for example, typically reports lower crime and healthier habits.

To sum up, both positions have their merits; nevertheless, I believe that education should take priority, because it tackles the root causes of crime instead of merely responding to its consequences, while basic policing must still be adequately funded.

Cụm cần nhớ

- **policing** — công tác cảnh sát
- **public safety** — an ninh công cộng
- **the foundation of everyday life** — nền tảng của đời sống hằng ngày
- **discourages business** — làm nản lòng kinh doanh
- **well-resourced policing** — lực lượng cảnh sát đủ nguồn lực
- **deter offences** — răn đe tội phạm
- **shorten emergency response times** — rút ngắn thời gian ứng phó khẩn cấp
- **vulnerable groups** — nhóm dễ tổn thương
- **regular patrols** — tuần tra thường xuyên
- **fewer break-ins** — ít vụ đột nhập hơn
- **tackles the root causes of crime** — giải quyết gốc rễ của tội phạm
- **less prone to criminal behaviour** — ít có xu hướng phạm tội hơn
- **deprived areas** — khu vực khó khăn
- **gangs and illegal work** — băng nhóm và việc làm phi pháp
- **take part in community life** — tham gia đời sống cộng đồng
- **the need to spend on enforcement** — nhu cầu chi cho thực thi pháp luật
- **take priority** — được ưu tiên
- **instead of merely responding to its consequences** — thay vì chỉ ứng phó hậu quả

Should individuals be responsible for education, or should society/government take action? Discuss.

People disagree about who should bear responsibility for education: individuals and their families, or society through the government. This essay will consider both views before explaining my own opinion.

On the one hand, supporters of individual responsibility argue that learning depends first on personal effort. Pupils who take ownership of their studies, and parents who encourage good habits at home, achieve better results than those who wait for the state to provide everything. Adults also gain from choosing and, where possible, paying for the training that suits their goals, because they value what they have invested in. Moreover, extensive state involvement can intrude on matters that arguably belong to the family, such as values and the choice of school. A family with strong religious convictions, for instance, may object to a standardised lesson on the subject.

On the other hand, advocates of government action point out that education is a public good that markets and families cannot provide equally. Without public funding, good-quality learning becomes a privilege reserved for wealthy families, leaving talented children from disadvantaged backgrounds with limited prospects. The state can also set common standards, train teachers and build schools at a scale that individuals cannot match, and society as a whole benefits from a skilled, informed population. Finland, which offers free education and consistently achieves strong results, illustrates how equal access can benefit society as a whole.

To sum up, both positions have their merits; nevertheless, I believe that the state should bear primary responsibility, with families and individuals playing a complementary role.

Cụm cần nhớ

- **bear responsibility for education** — chịu trách nhiệm về giáo dục
- **personal effort** — nỗ lực cá nhân
- **take ownership of their studies** — tự làm chủ việc học của mình
- **wait for the state to provide everything** — chờ nhà nước cung cấp mọi thứ
- **value what they have invested in** — trân trọng thứ mình đã đầu tư
- **intrude on matters that arguably belong to the family** — can thiệp vào chuyện thuộc về gia đình
- **strong religious convictions** — niềm tin tôn giáo mạnh
- **a public good that markets and families cannot provide equally** — hàng hoá công mà thị trường và gia đình không thể cung cấp công bằng
- **a privilege reserved for wealthy families** — đặc quyền chỉ dành cho gia đình giàu
- **limited prospects** — triển vọng hạn chế
- **set common standards** — đặt chuẩn chung
- **at a scale that individuals cannot match** — ở quy mô cá nhân không thể sánh
- **a skilled, informed population** — dân số có kỹ năng và hiểu biết
- **benefit society as a whole** — mang lại lợi ích cho toàn xã hội
- **bear primary responsibility** — chịu trách nhiệm chính
- **a complementary role** — vai trò bổ trợ

Is it better to focus government spending on public libraries or on digital resources? Discuss and give your opinion.

Opinions are divided as to whether public money should support libraries or digital resources. This essay will consider both perspectives before explaining my own opinion.

On the one hand, supporters of libraries emphasise their role in providing free and equal access to knowledge. Books, newspapers and databases that would cost a great deal to buy individually are available free of charge, while public computers and internet connections serve residents who have none at home. Libraries also act as community hubs, offering quiet study spaces, children's story sessions and language classes for newcomers, so they nurture a reading habit from an early age. For many isolated residents, such as retired people living alone, a weekly book club may be their main source of company.

On the other hand, advocates of digital resources point out that they reach far more people at a lower cost per user. A single online database or e-book collection can serve thousands of users at once, at any hour and from any location, which is particularly valuable for rural residents, people with disabilities and working adults. Digital materials can also be updated instantly and searched in seconds, so they remain current, whereas printed books require space, storage and replacement. Platforms such as Coursera and Khan Academy, for example, now give millions of users access to everything from school mathematics to university-level courses, often free of charge.

To sum up, both positions have their merits; nevertheless, I believe that digital resources deserve priority because they reach more people at lower cost, although libraries should be modernised so that they can offer both.

Cụm cần nhớ

- **digital resources** — tài nguyên số
- **free and equal access to knowledge** — tiếp cận tri thức miễn phí và bình đẳng
- **available free of charge** — có sẵn miễn phí
- **serve residents who have none at home** — phục vụ cư dân không có ở nhà
- **act as community hubs** — đóng vai trò trung tâm cộng đồng
- **quiet study spaces** — không gian học yên tĩnh
- **nurture a reading habit** — nuôi dưỡng thói quen đọc
- **isolated residents** — cư dân bị cô lập
- **main source of company** — nguồn bầu bạn chính
- **reach far more people at a lower cost per user** — tiếp cận nhiều người hơn với chi phí trên mỗi người thấp hơn
- **serve thousands of users at once** — phục vụ hàng nghìn người cùng lúc
- **at any hour** — vào bất kỳ giờ nào
- **from any location** — từ bất kỳ địa điểm nào
- **working adults** — người lao động trưởng thành
- **updated instantly** — cập nhật tức thì
- **searched in seconds** — tra cứu trong vài giây
- **remain current** — luôn cập nhật
- **require space, storage and replacement** — cần chỗ, kho và thay mới
- **free of charge** — miễn phí
- **deserve priority** — xứng đáng được ưu tiên
- **modernised** — được hiện đại hoá

Is it better to focus government spending on arts education or on science education? Discuss and give your opinion.

Opinions are divided as to whether governments should spend more on science education or on arts education. This essay will consider both perspectives before explaining my own opinion.

On the one hand, supporters of science education argue that it drives economic progress and solves practical problems. Employers in sectors such as engineering, healthcare and technology increasingly seek graduates with advanced technical knowledge, digital literacy and sound problem-solving abilities, and scientific research produces the innovations that create new industries and jobs. Countries that expanded access to schooling after the Second World War, such as South Korea, later enjoyed rapid economic growth. Science education also helps citizens to understand issues such as climate change and public health, so that they can judge evidence for themselves.

On the other hand, advocates of arts education point out that it develops creativity and wellbeing that science alone cannot. Designing, composing or painting has no single correct answer, so pupils learn to generate ideas, test them and improve their work, habits that innovation itself depends on. Creating something also gives young people a healthy way to express feelings and relieve stress, and some pupils who struggle with academic subjects discover talents and confidence through art. A pupil who sees a painting displayed in the school corridor, for instance, may gain a confidence that spreads to other lessons.

To sum up, both positions have their merits; nevertheless, I believe that science should take priority because of its economic and practical value, although the arts should not be neglected.

Cụm cần nhớ

- **drives economic progress and solves practical problems** — thúc đẩy tiến bộ kinh tế và giải quyết vấn đề thực tế
- **increasingly seek graduates with** — ngày càng tìm kiếm sinh viên tốt nghiệp có…
- **the innovations that create new industries and jobs** — những đổi mới tạo ra ngành và việc làm mới
- **rapid economic growth** — tăng trưởng kinh tế nhanh
- **climate change and public health** — biến đổi khí hậu và sức khoẻ cộng đồng
- **judge evidence for themselves** — tự đánh giá bằng chứng
- **develops creativity and wellbeing** — phát triển sáng tạo và sức khoẻ tinh thần
- **science alone cannot** — khoa học một mình không làm được
- **has no single correct answer** — không có đáp án đúng duy nhất
- **generate ideas, test them and improve their work** — nảy ý tưởng, thử nghiệm và cải thiện sản phẩm
- **express feelings and relieve stress** — bày tỏ cảm xúc và giải toả căng thẳng
- **discover talents and confidence** — khám phá tài năng và sự tự tin
- **spreads to other lessons** — lan sang các môn khác
- **take priority** — được ưu tiên
- **economic and practical value** — giá trị kinh tế và thực tiễn
- **should not be neglected** — không nên bị bỏ rơi

#467 Discuss both views · 274 từ · AI 8.0 (chấm chéo 8.0)

Some people believe that school libraries are outdated. Others disagree. Discuss both views and give your opinion.

Opinions are divided as to whether school libraries are outdated or remain valuable. This essay will consider both perspectives before explaining my own opinion.

On the one hand, critics argue that school libraries have lost their purpose in the digital age. Students can now find articles, e-books and videos on their phones in seconds, and online databases can serve thousands of users at once, at any hour and from any location, at a lower cost per user. Printed books quickly become out of date, and they require space, storage and staff that schools could use for laboratories or classrooms. Digital materials can also be updated instantly and searched in seconds. Many pupils therefore rarely visit the library, and money spent on shelves might be better invested in devices and online subscriptions.

On the other hand, supporters point out that libraries offer benefits that screens cannot. Books and databases are available free of charge, including to pupils who have no computer or internet at home, so libraries help to give everyone the same conditions and the same support. They provide a quiet space for study and encourage a reading habit, since children who browse shelves and choose their own books tend to enjoy reading more. Moreover, librarians help pupils to find reliable sources, a skill that becomes more important as online misinformation spreads. A student who cannot afford textbooks, for example, can still complete a research project by borrowing materials and using the library's databases.

To sum up, both positions have their merits; nevertheless, I believe that school libraries remain valuable, provided that they are modernised to combine books, digital resources and guidance on information.

Cụm cần nhớ

- **outdated** — lỗi thời
- **remain valuable** — vẫn có giá trị
- **lost their purpose in the digital age** — mất mục đích trong thời đại số
- **in seconds** — trong vài giây
- **serve thousands of users at once** — phục vụ hàng nghìn người cùng lúc
- **at any hour** — vào bất kỳ giờ nào
- **from any location** — từ bất kỳ địa điểm nào
- **at a lower cost per user** — với chi phí trên mỗi người dùng thấp hơn
- **printed books quickly become out of date** — sách in nhanh lạc hậu
- **require space, storage and staff** — cần diện tích, kho chứa và nhân viên
- **updated instantly** — cập nhật tức thì
- **searched in seconds** — tra cứu trong vài giây
- **better invested in** — nên đầu tư vào thì tốt hơn
- **online subscriptions** — gói đăng ký trực tuyến
- **benefits that screens cannot** — lợi ích màn hình không có
- **available free of charge** — có sẵn miễn phí
- **no computer or internet at home** — không có máy tính hay internet ở nhà
- **the same conditions and the same support** — cùng điều kiện và hỗ trợ
- **a quiet space for study** — không gian yên tĩnh để học
- **browse shelves** — lướt qua giá sách
- **reliable sources** — nguồn đáng tin cậy
- **online misinformation spreads** — thông tin sai lệch trên mạng lan rộng
- **borrowing materials** — mượn tài liệu
- **provided that they are modernised** — miễn là được hiện đại hoá
- **combine books, digital resources and guidance** — kết hợp sách, tài nguyên số và hướng dẫn

#41 Agree / Disagree · 291 từ · AI 8.0 (chấm chéo 8.0)

Some people say that children should learn coding at school. Do you agree or disagree?

Programming is no longer a specialist skill confined to software companies, and a growing number of people believe that children should learn to code at school. I firmly agree with this view, since coding develops logical problem-solving and prepares young people for a job market driven by software.

To begin with, learning to code cultivates computational thinking, that is, the habit of breaking a complex problem into smaller, logical steps. When pupils write a program, they must spell out every instruction precisely and then trace their own logic to discover why it fails. Debugging in this way builds patience, attention to detail and cause-and-effect reasoning, skills that transfer to mathematics, science and everyday decision-making. Unlike memorising facts, it shows learners that mistakes are a normal and useful part of reaching a solution. A pupil whose simple game keeps freezing, for instance, has to examine the code line by line instead of guessing at the cause.

Furthermore, coding prepares children for a world in which software underpins almost every industry. Finance, healthcare, design and even farming now rely on programs that analyse data and automate routine tasks, so employees who understand how such tools work have a clear advantage. Even pupils who never become software engineers will be better able to use, question and adapt the technology that shapes their working lives. An accountant who can write a short script to process thousands of invoices, for example, finishes in minutes what once took days. Admittedly, schools must provide trained teachers and suitable equipment, but this cost is modest compared with the benefits.

In conclusion, I am convinced that coding deserves a place in the school curriculum because it builds both a logical mind and the digital competence that the future will demand.

Cụm cần nhớ

- **a specialist skill** — kỹ năng chuyên môn hẹp
- **cultivates computational thinking** — nuôi dưỡng tư duy tính toán
- **breaking a complex problem into smaller, logical steps** — chia vấn đề phức tạp thành các bước logic nhỏ
- **spell out every instruction precisely** — nêu rõ từng chỉ dẫn chính xác
- **trace their own logic to discover why it fails** — lần theo logic của chính mình để tìm ra nguyên nhân lỗi
- **attention to detail** — chú ý đến chi tiết
- **cause-and-effect reasoning** — tư duy nhân quả
- **skills that transfer to mathematics, science and everyday decision-making** — kỹ năng áp dụng được sang toán, khoa học và quyết định hằng ngày
- **a normal and useful part of** — một phần bình thường và hữu ích của
- **software underpins almost every industry** — phần mềm là nền tảng của gần như mọi ngành
- **analyse data and automate routine tasks** — phân tích dữ liệu và tự động hoá việc lặp lại
- **a clear advantage** — lợi thế rõ rệt
- **use, question and adapt the technology** — sử dụng, đặt câu hỏi và điều chỉnh công nghệ
- **shapes their working lives** — định hình đời sống công việc của họ
- **finishes in minutes what once took days** — làm trong vài phút thứ từng mất nhiều ngày
- **trained teachers and suitable equipment** — giáo viên được đào tạo và thiết bị phù hợp
- **deserves a place in** — xứng đáng có vị trí trong
- **digital competence** — năng lực số

#46 Agree / Disagree · 280 từ · AI 8.0 (chấm chéo 8.0)

To what extent do you agree or disagree that homework should be banned?

Whether homework should be abolished is a question that divides parents, teachers and researchers alike. I agree that it should be banned, since it deprives children of rest and play and puts pupils from disadvantaged homes at a further disadvantage.

To begin with, setting homework robs children of the rest, play and family time that healthy development depends on. After six hours in class, many pupils face another two or three hours of written tasks, so sleep is cut short and hobbies are abandoned. Exhausted children absorb less in the following day's lessons, which defeats the purpose of the extra work. Resentment also builds, and some come to associate learning with chores rather than curiosity. A child who finishes worksheets at ten o'clock at night, for example, arrives at school drained the next morning.

Furthermore, restricting learning to school hours would make education fairer. At home, children from crowded or noisy households, or with parents who cannot explain difficult tasks, are at a clear disadvantage compared with classmates who have a quiet desk and a private tutor. Completing work in class, under the teacher's supervision, gives everyone the same conditions and the same support, and teachers receive an accurate picture of what each pupil can do unaided. Some argue that homework teaches self-discipline, but this skill can equally be developed through supervised independent study during the school day. A pupil whose parents work night shifts, for instance, has no one to explain a confusing mathematics exercise.

In conclusion, I believe that homework should be abolished, provided that schools use the time saved for supervised practice, because this approach protects children's wellbeing and gives every pupil an equal chance to succeed.

Cụm cần nhớ

- **divides parents, teachers and researchers alike** — chia rẽ cả phụ huynh, giáo viên lẫn nhà nghiên cứu
- **deprives children of rest and play** — tước đi thời gian nghỉ ngơi và vui chơi của trẻ
- **at a further disadvantage** — càng bất lợi hơn
- **robs children of the rest, play and family time that healthy development depends on** — cướp đi thời gian nghỉ, chơi và ở bên gia đình mà sự phát triển lành mạnh cần
- **sleep is cut short** — giấc ngủ bị cắt ngắn
- **hobbies are abandoned** — sở thích bị bỏ bê
- **which defeats the purpose of the extra work** — làm mất ý nghĩa của khối lượng việc thêm
- **associate learning with chores** — gắn việc học với việc vặt
- **curiosity** — sự tò mò
- **a quiet desk** — góc học yên tĩnh
- **a private tutor** — gia sư riêng
- **under the teacher's supervision** — dưới sự giám sát của giáo viên
- **gives everyone the same conditions and the same support** — mang lại cho mọi người cùng điều kiện và cùng sự hỗ trợ
- **what each pupil can do unaided** — mỗi học sinh tự làm được gì mà không cần trợ giúp
- **self-discipline** — tính tự kỷ luật
- **supervised independent study** — tự học có giám sát
- **protects children's wellbeing** — bảo vệ sức khoẻ tinh thần của trẻ
- **an equal chance to succeed** — cơ hội thành công như nhau

#66 Agree / Disagree · 272 từ · AI 8.0 (chấm chéo 8.0)

To what extent do you agree or disagree that tests and exams accurately measure intelligence?

Examinations have been the main way of judging students for generations, and some people claim that they give an accurate measure of intelligence. I strongly disagree with this view, since tests capture only a narrow range of abilities and their results are easily distorted by pressure and unequal preparation.

To begin with, relying on examinations gives only a narrow picture of ability. Written tests mainly reward memory and speed under timed conditions, while creativity, teamwork, leadership and practical skills go unmeasured. Consequently, talented individuals who simply perform poorly in exam halls may be unfairly labelled as weak, and teaching tends to drift towards test preparation instead of genuine understanding. Over time, such a system rewards the best-prepared pupils rather than the most capable ones. A gifted artist or entrepreneur, for example, may leave school with unimpressive grades despite exceptional real-world potential.

Furthermore, exam results are heavily influenced by factors that have little to do with intelligence. High-stakes tests tend to place students under excessive and prolonged pressure, so anxiety, sleepless nights and fear of failure can lower the performance of even very capable candidates. In addition, pupils whose families can afford private tutors enjoy a clear advantage over equally able classmates who cannot. Admittedly, examinations provide a standard that is easy to compare, but being easy to compare is not the same as being accurate. Assessment that combines coursework, projects and presentations over a longer period would give a fairer and fuller picture of what each student can actually do.

In conclusion, I cannot accept that exams accurately measure intelligence, given their narrow focus and their sensitivity to stress and family wealth.

Cụm cần nhớ

- **accurate measure of intelligence** — thước đo chính xác trí thông minh
- **a narrow range of abilities** — phạm vi năng lực hẹp
- **easily distorted by pressure** — dễ bị méo mó bởi áp lực
- **unequal preparation** — sự chuẩn bị không đồng đều
- **relying on examinations gives only a narrow picture of ability** — dựa vào thi cử chỉ cho một bức tranh hẹp về năng lực
- **mainly reward memory and speed under timed conditions** — chủ yếu thưởng cho trí nhớ và tốc độ trong điều kiện giới hạn thời gian
- **go unmeasured** — không được đo lường
- **unfairly labelled as weak** — bị gán nhãn yếu một cách bất công
- **teaching tends to drift towards test preparation instead of genuine understanding** — việc dạy có xu hướng trượt sang luyện thi thay vì hiểu thật sự
- **exceptional real-world potential** — tiềm năng thực tế vượt trội
- **high-stakes tests** — bài thi quyết định (áp lực cao)
- **excessive and prolonged pressure** — áp lực quá mức và kéo dài
- **sleepless nights** — những đêm mất ngủ
- **fear of failure** — nỗi sợ thất bại
- **pupils whose families can afford private tutors enjoy a clear advantage over equally able classmates** — học sinh có gia đình trả được gia sư có lợi thế rõ so với bạn cùng năng lực
- **a fairer and fuller picture** — bức tranh công bằng và đầy đủ hơn

#101 Agree / Disagree · 262 từ · AI 7.5 (chấm chéo 8.0)

Some people say that university degrees are less valuable now. Do you agree or disagree?

Rising tuition fees and the success of entrepreneurs who never graduated have led some people to claim that university degrees are less valuable than they once were. I disagree with this view, since a degree still opens doors to well-paid careers and develops abilities that employers continue to demand.

To begin with, a degree remains the gateway to many professions. Doctors, engineers, architects and teachers cannot practise without recognised qualifications, and in other fields employers routinely use a degree to screen applicants when hundreds apply for a single vacancy. Statistically, graduates also tend to earn more and face lower unemployment over their working lives than those with only school-level qualifications. As a result, the financial benefit usually outweighs the cost in the long term. A graduate engineer, for instance, can expect far wider opportunities than someone who left school without a technical qualification.

Furthermore, university teaches skills that go beyond a particular subject. Students learn to research independently, analyse evidence, meet deadlines and communicate ideas clearly, abilities that remain useful when technology changes the content of jobs. They also form friendships and professional networks that often lead to opportunities later. Admittedly, some successful people in the technology industry left university early, and trades such as plumbing offer secure incomes without a degree, but these examples are exceptions rather than the rule. For most young people, a degree still provides the most reliable route to a stable career.

In conclusion, I do not believe that degrees have lost their value, because they continue to unlock professions and to build skills that employers prize.

Cụm cần nhớ

- **Rising tuition fees** — học phí tăng
- **opens doors to** — mở ra cánh cửa tới
- **well-paid careers** — nghề lương cao
- **the gateway to many professions** — cánh cửa vào nhiều ngành nghề
- **recognised qualifications** — bằng cấp được công nhận
- **use a degree to screen applicants when hundreds apply for a single vacancy** — dùng bằng cấp để sàng lọc khi hàng trăm người nộp cho một vị trí
- **lower unemployment** — tỷ lệ thất nghiệp thấp hơn
- **the financial benefit usually outweighs the cost in the long term** — lợi ích tài chính thường vượt chi phí về lâu dài
- **research independently** — nghiên cứu độc lập
- **meet deadlines** — đúng hạn
- **friendships and professional networks that often lead to opportunities later** — tình bạn và mạng lưới nghề nghiệp thường mở ra cơ hội sau này
- **these examples are exceptions rather than the rule** — những ví dụ này là ngoại lệ chứ không phải quy luật
- **a stable career** — sự nghiệp ổn định
- **unlock professions** — mở ra các ngành nghề

#114 Agree / Disagree · 261 từ · AI 8.0 (chấm chéo 8.0)

Many people think that music education benefits children. Do you agree? Explain with examples.

Music is often regarded as an optional extra in the school timetable, but I firmly agree that music education benefits children, since it strengthens their intellectual skills and supports their emotional and social development.

To begin with, learning an instrument trains the mind. Reading notation, memorising pieces and coordinating hands, eyes and ears demand sustained concentration, and regular practice teaches pupils that improvement comes from patient, repeated effort. These habits of focus and self-discipline carry over into other subjects, and research has associated musical training with stronger memory and language skills. As a result, children who play an instrument often approach homework and revision with greater persistence. A pupil who has spent months mastering a difficult piece, for example, learns that perseverance eventually produces results.

Furthermore, music contributes to emotional wellbeing and teamwork. Playing in a band or singing in a choir requires children to listen to others, adjust their own part and take shared responsibility for the final performance, so it fosters cooperation and mutual respect. Performing in front of an audience also builds self-confidence, and music gives young people a healthy way to express feelings and relieve stress. Admittedly, instruments and specialist teachers cost money, but schools can begin with inexpensive options such as singing and percussion. A shy pupil who gains confidence by performing in a school concert is likely to speak up more readily in other lessons.

In conclusion, I am convinced that music education benefits children by sharpening their concentration and by nurturing confidence and cooperation, and it should therefore remain part of every school's programme.

Cụm cần nhớ

- **an optional extra** — phần phụ không bắt buộc
- **strengthens their intellectual skills** — củng cố kỹ năng trí tuệ
- **emotional and social development** — phát triển cảm xúc và xã hội
- **trains the mind** — rèn luyện trí óc
- **sustained concentration** — sự tập trung kéo dài
- **improvement comes from patient, repeated effort** — tiến bộ đến từ nỗ lực kiên nhẫn, lặp lại
- **self-discipline** — tính tự kỷ luật
- **carry over into other subjects** — chuyển sang các môn khác
- **approach homework and revision with greater persistence** — làm bài và ôn tập bền bỉ hơn
- **perseverance eventually produces results** — kiên trì rồi sẽ có kết quả
- **take shared responsibility for the final performance** — cùng chịu trách nhiệm về kết quả chung
- **mutual respect** — tôn trọng lẫn nhau
- **builds self-confidence** — xây dựng sự tự tin
- **express feelings and relieve stress** — bày tỏ cảm xúc và giải toả căng thẳng
- **sharpening their concentration** — làm sắc bén sự tập trung
- **nurturing confidence and cooperation** — nuôi dưỡng sự tự tin và hợp tác

#126 Agree / Disagree · 268 từ · AI 8.0 (chấm chéo 8.0)

To what extent do you agree or disagree that examinations should be replaced by continuous assessment?

Final examinations have long dominated education, but a growing number of educators argue that they should give way to continuous assessment. I largely agree with this view, since assessment spread over the year measures learning more fairly and puts less pressure on students.

To begin with, continuous assessment tracks progress over time and rewards steady work instead of last-minute cramming. Coursework, projects, presentations and regular quizzes show what a student can do in different situations, whereas a single paper mainly rewards memory and speed under timed conditions. Teachers can also give feedback while there is still time to improve, so assessment becomes part of learning rather than its conclusion. A pupil who struggles with fractions in October, for example, can be helped immediately instead of discovering the problem in a final paper the following summer.

Furthermore, replacing high-stakes exams would reduce the excessive pressure that damages wellbeing and distorts results. When one afternoon decides a young person's future, anxiety, illness or a bad day can lower the performance of even very capable candidates, and pupils whose families can afford private tutors enjoy a clear advantage. Spreading assessment over many months makes results more reliable and fairer. Admittedly, coursework brings its own risks, such as plagiarism, extra workload for teachers and inconsistent marking, so it needs clear moderation rules and perhaps a short final test to verify the work. These problems are manageable, however, and do not outweigh the benefits.

In conclusion, I believe that continuous assessment should largely replace final examinations because it is fairer, less stressful and more useful for learning, provided that it is carefully moderated.

Cụm cần nhớ

- **dominated education** — thống trị giáo dục
- **give way to** — nhường chỗ cho
- **continuous assessment** — đánh giá liên tục
- **puts less pressure on students** — gây ít áp lực hơn cho sinh viên
- **tracks progress over time** — theo dõi tiến bộ theo thời gian
- **rewards steady work instead of last-minute cramming** — thưởng cho học đều đặn thay vì nhồi nhét phút chót
- **a single paper** — một bài thi duy nhất
- **under timed conditions** — trong điều kiện hạn giờ
- **give feedback while there is still time to improve** — phản hồi khi còn kịp để cải thiện
- **high-stakes exams** — kỳ thi quyết định
- **damages wellbeing** — làm tổn hại sức khoẻ tinh thần
- **distorts results** — làm sai lệch kết quả
- **a clear advantage** — lợi thế rõ rệt
- **more reliable and fairer** — đáng tin và công bằng hơn
- **clear moderation rules** — quy tắc kiểm duyệt / chuẩn hoá chấm điểm rõ ràng
- **outweigh the benefits** — lớn hơn lợi ích

#127 Agree / Disagree · 273 từ · AI 8.0 (chấm chéo 8.0)

Many people say that online education is overpriced. Do you agree or disagree? Give reasons and examples.

As online degrees and courses multiply, some people complain that they are overpriced. I disagree with this view, since online education generally costs learners far less than campus study and offers a flexibility that more than justifies the fees that remain.

To begin with, online study is often considerably cheaper than the traditional alternative. Learners avoid expenses such as commuting, accommodation and printed textbooks, while institutions save on buildings and staff because one recorded lecture can reach thousands of students, so fees can be kept lower. Many platforms also offer free introductory courses or monthly subscriptions that cost a fraction of a university term. A university course delivered online, for example, may cost a fraction of its on-campus equivalent.

Furthermore, the flexibility of online learning adds real value for money. Students can attend lessons from any location, replay difficult explanations and study around jobs or family responsibilities, so they do not have to give up their income to gain a qualification. People who would otherwise be excluded, such as rural residents and working parents, are able to study at all. Learners who study part-time can even spread payments over several months, which makes qualifications affordable to people on modest incomes. Admittedly, a few commercial providers charge high fees for little teaching support, and learners should check accreditation, tutor access and graduate outcomes before paying. Such cases, however, are exceptions rather than the rule, and they do not justify the claim that online education as a whole is overpriced.

In conclusion, I do not agree that online education is overpriced, because it lowers costs for both learners and institutions while widening access to qualifications.

Cụm cần nhớ

- **multiply** — tăng nhanh
- **complain that they are overpriced** — phàn nàn là quá đắt
- **more than justifies the fees** — biện minh cho học phí còn thừa
- **considerably cheaper** — rẻ hơn đáng kể
- **one recorded lecture can reach thousands of students** — một bài giảng ghi hình tiếp cận hàng nghìn sinh viên
- **fees can be kept lower** — có thể giữ học phí thấp hơn
- **a fraction of** — một phần nhỏ của
- **adds real value for money** — thêm giá trị thực cho đồng tiền
- **from any location** — từ bất kỳ địa điểm nào
- **family responsibilities** — trách nhiệm gia đình
- **give up their income** — từ bỏ thu nhập
- **spread payments over several months** — chia nhỏ thanh toán nhiều tháng
- **modest incomes** — thu nhập khiêm tốn
- **high fees for little teaching support** — phí cao nhưng ít hỗ trợ giảng dạy
- **check accreditation, tutor access and graduate outcomes before paying** — kiểm tra kiểm định, khả năng liên hệ giảng viên và kết quả cựu sinh viên trước khi trả tiền
- **exceptions rather than the rule** — ngoại lệ chứ không phải quy luật
- **widening access to qualifications** — mở rộng tiếp cận bằng cấp

#141 Agree / Disagree · 275 từ · AI 8.0 (chấm chéo 8.0)

Some people say that art classes should be optional, not compulsory. Do you agree or disagree?

Art classes are often among the first subjects to be dropped when timetables become crowded, and some people argue that they should be optional. I disagree with this view, since compulsory art develops creativity and emotional wellbeing that all pupils need, not only those who already enjoy drawing or painting.

To begin with, art develops creative thinking and problem-solving skills. Designing a poster, sketching a model or planning a sculpture requires pupils to generate ideas, test them, make mistakes and improve their work, a process that has no single correct answer. These habits of experimentation and observation transfer to science, engineering and everyday decisions, where flexible thinking is increasingly valued by employers. A pupil who has repeatedly redesigned a clay model until it stands securely, for example, practises exactly the persistence that engineers need.

Furthermore, art contributes to emotional wellbeing and confidence. Creating something gives young people a healthy way to express feelings and relieve stress, and displaying their work builds pride in what they can achieve. If art were optional, many pupils who believe they are not artistic would never try it, and some talents would remain undiscovered. A pupil who sees a painting displayed in the school corridor, for instance, may gain a confidence that spreads to other lessons. Admittedly, art classes use time and materials, but schools can keep sessions short and use inexpensive resources, so this cost is modest compared with the benefits.

In conclusion, I do not agree that art classes should be optional, because they develop creativity, resilience and confidence in every pupil, and a compulsory but flexible programme is the best way to ensure that all children benefit.

Cụm cần nhớ

- **dropped when timetables become crowded** — bị cắt khi thời khoá biểu quá tải
- **compulsory art** — môn mỹ thuật bắt buộc
- **creativity and emotional wellbeing** — sáng tạo và sức khoẻ tinh thần
- **generate ideas** — nảy ra ý tưởng
- **has no single correct answer** — không có đáp án đúng duy nhất
- **habits of experimentation and observation** — thói quen thử nghiệm và quan sát
- **transfer to** — áp dụng sang
- **flexible thinking** — tư duy linh hoạt
- **practises exactly the persistence** — rèn đúng sự kiên trì
- **express feelings and relieve stress** — bày tỏ cảm xúc và giải toả căng thẳng
- **builds pride in** — xây dựng niềm tự hào về
- **some talents would remain undiscovered** — một số tài năng sẽ không bao giờ được phát hiện
- **spreads to other lessons** — lan sang các môn khác
- **inexpensive resources** — nguồn lực rẻ tiền
- **resilience** — khả năng phục hồi
- **a compulsory but flexible programme** — chương trình bắt buộc nhưng linh hoạt

#155 Agree / Disagree · 266 từ · AI 7.5 (chấm chéo 8.0)

Some believe that school uniforms improve discipline. To what extent do you agree or disagree?

Many schools around the world require pupils to wear uniforms, partly in the belief that they improve discipline. I largely agree with this view, since uniforms reduce distractions and encourage a shared sense of responsibility, although they are only one part of good discipline.

To begin with, uniforms remove many sources of distraction and conflict. When everyone dresses alike, pupils spend less time competing over fashionable brands or being judged for what they wear, and teachers spend less time enforcing complicated dress codes. Attention can therefore shift towards lessons. A single, clear dress standard is also easy to enforce, so pupils know exactly where the boundaries lie. Uniforms also make it easy to recognise outsiders on school grounds, which helps staff to maintain safety and order. A school in which pupils arrive in expensive trainers and designer jackets, for example, often has to deal with comparisons, teasing and even theft.

Furthermore, wearing a uniform fosters a sense of belonging and responsibility. Pupils who represent their school in a recognisable outfit tend to behave more carefully in public, because their conduct reflects on the whole community, and they learn to follow rules as a routine part of the day. These habits of punctuality, neatness and respect carry over into later life. However, uniforms alone cannot create discipline. Clear expectations, consistent consequences and good relationships with teachers matter more, and uniforms that are costly or uncomfortable may breed resentment instead.

In conclusion, I largely agree that uniforms support discipline by reducing distraction and strengthening group identity, provided that they are affordable and combined with fair, consistent school rules.

Cụm cần nhớ

- **improve discipline** — cải thiện kỷ luật
- **reduce distractions** — giảm xao nhãng
- **a shared sense of responsibility** — ý thức trách nhiệm chung
- **remove many sources of distraction and conflict** — loại bỏ nhiều nguồn xao nhãng và xung đột
- **competing over fashionable brands** — ganh đua về thương hiệu thời trang
- **enforcing complicated dress codes** — thực thi quy định ăn mặc phức tạp
- **a single, clear dress standard** — một chuẩn ăn mặc rõ ràng
- **easy to enforce** — dễ thực thi
- **recognise outsiders** — nhận ra người lạ
- **maintain safety and order** — giữ an toàn và trật tự
- **comparisons, teasing and even theft** — so sánh, trêu chọc và thậm chí trộm cắp
- **fosters a sense of belonging** — nuôi dưỡng cảm giác thuộc về
- **reflects on the whole community** — ảnh hưởng đến cả cộng đồng
- **consistent consequences** — hệ quả nhất quán
- **breed resentment** — gây bực bội

#161 Agree / Disagree · 280 từ · AI 7.5 (chấm chéo 8.0)

Some people say that reducing the school week improves student wellbeing. Do you agree or disagree?

A small but growing number of schools have experimented with a four-day week, and some people believe that this improves student wellbeing. I largely agree, since a longer break gives pupils time to rest and reduces the pressure that leads to exhaustion, although the arrangement has costs that must be managed.

To begin with, a shorter week gives students the time to recover physically and mentally. Many pupils spend six hours in class and then complete homework and activities, so sleep is cut short and there is little time for friends, hobbies or exercise. An extra free day allows them to catch up on sleep, pursue interests and spend time with their families, which lowers stress and improves mood. Teachers also benefit, because they gain time to prepare lessons and are less likely to suffer burnout, which in turn improves the quality of teaching. A teenager who uses a free Friday for sport and volunteering, for instance, returns to school on Monday refreshed.

Furthermore, a compressed timetable can make lessons more focused. When days are longer and the week shorter, schools tend to cut wasted time between lessons and concentrate on core subjects, and fewer journeys to school also save money and reduce tiredness. However, the benefits depend on careful planning. Working parents may struggle to arrange childcare for the extra day, and pupils from disadvantaged homes may lose structured learning time unless schools provide optional supervised activities. Provided that these problems are addressed, the advantages of rest and focus are considerable.

In conclusion, I believe that a shorter school week can improve wellbeing by allowing rest and reducing pressure, as long as schools protect learning time and support families.

Cụm cần nhớ

- **experimented with a four-day week** — thử nghiệm tuần học bốn ngày
- **improves student wellbeing** — cải thiện sức khoẻ tinh thần học sinh
- **time to rest** — thời gian nghỉ ngơi
- **pressure that leads to exhaustion** — áp lực dẫn đến kiệt sức
- **recover physically and mentally** — hồi phục về thể chất lẫn tinh thần
- **sleep is cut short** — giấc ngủ bị cắt ngắn
- **catch up on sleep** — ngủ bù
- **pursue interests** — theo đuổi sở thích
- **lowers stress and improves mood** — giảm căng thẳng và cải thiện tâm trạng
- **suffer burnout** — bị kiệt sức nghề nghiệp
- **returns to school on Monday refreshed** — quay lại trường vào thứ Hai với tinh thần sảng khoái
- **a compressed timetable** — thời khoá biểu dồn lại
- **cut wasted time** — cắt thời gian lãng phí
- **careful planning** — lập kế hoạch cẩn thận
- **struggle to arrange childcare** — khó thu xếp người trông con
- **structured learning time** — thời gian học có cấu trúc
- **protect learning time** — bảo vệ thời gian học

To what extent do you agree or disagree that children should learn a second language at primary school?

Many countries start foreign-language teaching only in secondary school, but I agree that children should begin learning a second language in primary school, since young learners acquire languages more easily and benefit from a longer period of study.

To begin with, young children absorb sounds and structures easily. Before adolescence, pupils can develop accurate pronunciation and an instinctive feel for grammar that older learners find difficult to match, because they learn through listening, songs and games instead of formal rules. Starting early also gives them many more years of study, so they are likely to reach a higher level by the time they leave school. A child who sings songs in French every week, for example, may pronounce the language more naturally than a teenager who begins at fourteen.

Furthermore, early language learning brings cognitive and cultural benefits. Switching between languages exercises memory and attention, and children learn that other cultures see the world differently, which promotes open-mindedness. Multilingual graduates are also able to work in international companies, giving them a clear advantage in a competitive labour market. Some argue that a second language will overload young pupils, but lessons in primary school can be short and play-based, so they need not take time from literacy and mathematics. Provided that teachers are well trained and the programme is enjoyable, the workload is manageable, and the long-term rewards are considerable.

In conclusion, I believe that children should learn a second language at primary school because they learn easily, have more time to progress and gain lasting cognitive and career benefits.

Cụm cần nhớ

- **foreign-language teaching** — dạy ngoại ngữ
- **acquire languages more easily** — tiếp thu ngôn ngữ dễ hơn
- **a longer period of study** — thời gian học dài hơn
- **children absorb sounds and structures easily** — trẻ nhỏ tiếp thu âm thanh và cấu trúc rất dễ
- **accurate pronunciation** — phát âm chuẩn xác
- **an instinctive feel for grammar** — cảm nhận ngữ pháp bản năng
- **difficult to match** — khó sánh được
- **learn through listening, songs and games instead of formal rules** — học qua nghe, bài hát và trò chơi thay vì quy tắc
- **reach a higher level** — đạt trình độ cao hơn
- **cognitive and cultural benefits** — lợi ích nhận thức và văn hoá
- **exercises memory and attention** — rèn luyện trí nhớ và sự chú ý
- **see the world differently** — nhìn thế giới khác đi
- **promotes open-mindedness** — thúc đẩy sự cởi mở
- **multilingual graduates** — sinh viên tốt nghiệp biết nhiều ngôn ngữ
- **a clear advantage in a competitive labour market** — lợi thế rõ rệt trên thị trường lao động cạnh tranh
- **short and play-based, so they need not take time from literacy and mathematics** — ngắn và qua trò chơi, nên không lấy thời gian của đọc viết và toán
- **well trained** — được đào tạo tốt
- **the workload is manageable** — khối lượng việc có thể quản lý

#167 Agree / Disagree · 261 từ · AI 7.5 (chấm chéo 7.5)

Many people say that homeschooling isolates children. Do you agree or disagree? Give reasons and examples.

Some people say that homeschooling isolates children. I largely agree, since children taught entirely at home miss the daily social contact of school and the specialist teaching that schools provide, although families can reduce the problem with effort.

To begin with, learning mostly at home limits children's social development. School is where children learn to make friends, resolve disagreements and work in groups, and they meet peers from different backgrounds who challenge their assumptions. A homeschooled child may spend most days with adults and siblings, and without regular practice may struggle to cooperate, handle conflict or speak confidently in unfamiliar groups. Over time, this can affect confidence and teamwork later in life. A child taught entirely at home, for example, may find a first job interview or group project unusually daunting.

Furthermore, homeschooling cannot match the expertise and facilities that schools provide. Few parents are qualified to teach every subject to a high standard, and laboratories, sports grounds and specialist equipment are rarely available at home. As a result, pupils may leave with gaps in their knowledge that are difficult to repair later. A parent with no scientific background, for example, may struggle to guide a teenager through chemistry experiments. However, isolation is not inevitable. Parents who join homeschooling groups, sports clubs and community classes can give children regular social contact. Such arrangements demand time and organisation, so the risk remains greater for families who lack them.

In conclusion, I largely agree that homeschooling isolates children, because it reduces social contact and specialist teaching, although deliberate effort can limit the problem.

Cụm cần nhớ

- **isolates children** — cô lập trẻ em
- **miss the daily social contact** — bỏ lỡ tiếp xúc xã hội hằng ngày
- **specialist teaching** — giảng dạy chuyên môn
- **limits children's social development** — hạn chế sự phát triển xã hội của trẻ
- **resolve disagreements** — giải quyết bất đồng
- **work in groups** — làm việc nhóm
- **challenge their assumptions** — thách thức giả định của chúng
- **handle conflict** — xử lý xung đột
- **speak confidently in unfamiliar groups** — nói tự tin trong nhóm xa lạ
- **unusually daunting** — khó khăn khác thường
- **match the expertise and facilities** — sánh được chuyên môn và cơ sở vật chất
- **to a high standard** — ở tiêu chuẩn cao
- **laboratories, sports grounds and specialist equipment** — phòng thí nghiệm, sân thể thao và thiết bị chuyên dụng
- **gaps in their knowledge that are difficult to repair later** — lỗ hổng kiến thức khó khắc phục về sau
- **guide a teenager through** — hướng dẫn thiếu niên qua
- **isolation is not inevitable** — cô lập không phải điều tất yếu
- **regular social contact** — tiếp xúc xã hội thường xuyên
- **deliberate effort** — nỗ lực có chủ đích
- **limit the problem** — hạn chế vấn đề

#221 Agree / Disagree · 265 từ · AI 8.0 (chấm chéo 8.0)

Some people say that mobile phones should be banned in classrooms. Do you agree or disagree?

Mobile phones have become a constant presence in students' lives, and many people argue that they should be banned in classrooms. I agree with this view, since phones undermine concentration and expose pupils to misuse, although there should be exceptions for genuine educational use.

To begin with, allowing phones in lessons undermines concentration, because a phone is designed to compete for attention. Notifications, games and social media tempt pupils to glance at their screens every few minutes, and even a brief interruption can break the train of thought needed to follow an explanation. Teachers consistently report that lessons run more smoothly and pupils participate more when phones are out of sight. A ban is therefore a simple way to protect the limited time available for teaching. A pupil who keeps checking messages during a mathematics explanation, for instance, falls behind and then struggles with the homework.

Furthermore, unrestricted phone use exposes students to misuse, from cheating to cyberbullying. Phones make it easy to cheat in tests, record classmates without consent or circulate hurtful messages, and teachers cannot monitor every screen at once. A clear ban removes these temptations and gives schools a simple, enforceable rule. Some argue that phones are useful learning tools and that parents need to contact their children. However, schools can provide computers for research, allow phones in designated sessions and route emergency calls through the school office, so the benefits are kept without constant distraction.

In conclusion, I believe that mobile phones should be banned in classrooms because they harm concentration and encourage misuse, with limited exceptions for planned educational use.

Cụm cần nhớ

- **a constant presence in** — sự hiện diện thường trực trong
- **undermine concentration** — làm suy giảm sự tập trung
- **expose pupils to misuse** — khiến học sinh dễ bị lạm dụng
- **genuine educational use** — mục đích giáo dục thật sự
- **a phone is designed to compete for attention** — điện thoại được thiết kế để tranh giành sự chú ý
- **break the train of thought needed to follow an explanation** — ngắt mạch suy nghĩ cần để theo kịp lời giảng
- **run more smoothly** — diễn ra suôn sẻ hơn
- **out of sight** — khuất tầm nhìn
- **protect the limited time available for teaching** — bảo vệ thời gian dạy học hạn hẹp
- **from cheating to cyberbullying** — từ gian lận đến bắt nạt mạng
- **without consent** — không có sự đồng ý
- **circulate hurtful messages** — lan truyền tin nhắn gây tổn thương
- **a simple, enforceable rule** — quy định đơn giản, có thể thực thi
- **allow phones in designated sessions** — cho dùng điện thoại trong các buổi được chỉ định
- **route emergency calls through the school office** — chuyển cuộc gọi khẩn cấp qua văn phòng trường
- **constant distraction** — xao nhãng liên tục

#241 Agree / Disagree · 261 từ · AI 7.5 (chấm chéo 8.0)

Some people say that community service should be compulsory for students. Do you agree or disagree?

Community service, such as helping in care homes or cleaning public spaces, is voluntary in most schools. I agree that it should be compulsory for students, since it builds empathy and practical skills and strengthens communities, although it should be organised flexibly.

To begin with, compulsory community service develops empathy and a sense of responsibility. Pupils who spend time with elderly residents, homeless people or children with disabilities see problems that they would rarely meet in their own neighbourhoods, and this experience makes social issues real rather than abstract. They also learn teamwork, communication and reliability, qualities valued by employers and universities. A teenager who helps to run a weekly food bank, for example, learns how much effort is needed to support people in need.

Furthermore, communities benefit from the extra help. Schools that require a modest number of service hours each year provide charities, hospitals and local authorities with willing volunteers, and many projects, such as environmental clean-ups, would not happen otherwise. Some argue that compulsion undermines genuine goodwill, since students may resent being forced. However, many pupils who begin reluctantly continue voluntarily once they see the results, and a requirement ensures that all students, not only the already motivated, gain the experience. Schools can minimise resentment by letting pupils choose from a range of projects that match their interests and timetables, so that service feels like an opportunity rather than a punishment.

In conclusion, I believe that community service should be compulsory because it benefits both students and society, provided that pupils are given a genuine choice of activities.

Cụm cần nhớ

- **community service** — hoạt động phục vụ cộng đồng
- **builds empathy** — xây dựng sự đồng cảm
- **strengthens communities** — củng cố cộng đồng
- **organised flexibly** — được tổ chức linh hoạt
- **a sense of responsibility** — ý thức trách nhiệm
- **makes social issues real rather than abstract** — làm các vấn đề xã hội trở nên thật chứ không trừu tượng
- **valued by employers and universities** — được nhà tuyển dụng và đại học coi trọng
- **a weekly food bank** — ngân hàng thực phẩm hằng tuần
- **people in need** — người đang cần giúp đỡ
- **willing volunteers** — tình nguyện viên nhiệt tình
- **environmental clean-ups** — dọn dẹp môi trường
- **undermines genuine goodwill** — làm suy giảm thiện chí thật sự
- **begin reluctantly** — bắt đầu miễn cưỡng
- **minimise resentment** — giảm thiểu sự bực bội
- **an opportunity rather than a punishment** — cơ hội chứ không phải hình phạt
- **a genuine choice of activities** — quyền lựa chọn hoạt động thực sự

To what extent do you agree or disagree that standardized tests are fair?

Standardised tests are often defended as the fairest way of judging students because everyone answers identical questions. I disagree with this view, since equal questions do not guarantee equal conditions, and a single test captures too little of what students can do.

To begin with, students do not arrive at the test on equal terms. Pupils whose families can afford private tutors, practice papers and quiet study spaces enjoy a clear advantage over equally able classmates who cannot, so a high score may reflect household income as much as ability. Language and cultural background also matter: a question framed around an unfamiliar situation can confuse students from different communities even when they know the underlying content. Consequently, a procedure that looks neutral can quietly reinforce existing inequalities. A talented pupil who studies in a crowded home and learns English as a second language, for example, may be unable to show her true level.

Furthermore, a single test offers only a snapshot of performance on one day. Illness, nerves or a family problem can lower the result of even a very capable candidate, while the format rewards memory and speed under timed conditions and ignores creativity, teamwork and practical skills. Admittedly, standardised tests are easy to compare, but being easy to compare is not the same as being fair. Assessment that combines coursework, projects and classroom observation over a longer period would give a more complete and just picture.

In conclusion, I cannot accept that standardised tests are fair, because unequal preparation and a narrow, one-day snapshot distort the results.

Cụm cần nhớ

- **the fairest way of judging students** — cách công bằng nhất để đánh giá học sinh
- **do not guarantee equal conditions** — không đảm bảo điều kiện ngang nhau
- **captures too little of** — chỉ phản ánh quá ít
- **arrive at the test on equal terms** — đến kỳ thi ở vị trí ngang nhau
- **practice papers** — đề luyện thi
- **quiet study spaces** — không gian học yên tĩnh
- **a clear advantage over** — lợi thế rõ rệt so với
- **reflect household income** — phản ánh thu nhập hộ gia đình
- **cultural background** — nền tảng văn hoá
- **quietly reinforce existing inequalities** — âm thầm củng cố bất bình đẳng sẵn có
- **show her true level** — thể hiện đúng trình độ của em
- **a snapshot of performance on one day** — ảnh chụp kết quả của một ngày duy nhất
- **Illness, nerves or a family problem** — bệnh, lo lắng hay chuyện gia đình
- **under timed conditions** — trong điều kiện hạn giờ
- **a more complete and just picture** — bức tranh đầy đủ và công bằng hơn
- **unequal preparation** — sự chuẩn bị không đồng đều
- **distort the results** — làm sai lệch kết quả

#255 Agree / Disagree · 273 từ · AI 8.0 (chấm chéo 8.0)

Some believe that religious education should be part of the school curriculum. To what extent do you agree or disagree?

Debates about religion in schools often divide families and politicians. I largely agree that religious education should be part of the curriculum, provided that it teaches about many beliefs in a balanced way rather than instructing pupils in a single faith.

To begin with, learning about religions builds cultural understanding. Religious ideas shape art, literature, law and politics in countries around the world, so pupils who know the basics of major faiths understand history and current events far better. In diverse societies, familiarity with different beliefs also weakens prejudice, since people are less likely to rely on stereotypes about those they understand. Pupils also gain the vocabulary to discuss sensitive subjects calmly and respectfully. A class that studies how festivals such as Diwali, Ramadan and Christmas are celebrated, for example, learns respect for neighbours' traditions.

However, religious education has legitimate limits. Beliefs are a private matter, and parents differ widely in what they wish their children to be taught, so a lesson that promotes one faith may clash with family wishes and amount to indoctrination. It also risks overloading a timetable that is already full, which could reduce time for core subjects such as literacy and science. Schools should therefore teach about religions factually and neutrally, alongside non-religious worldviews, and allow families to choose whether their children take part in devotional activities. Such an approach protects freedom of belief while still giving all pupils the knowledge they need to live peacefully with others.

In conclusion, religious education deserves a place in the curriculum to a large extent, as a neutral study of beliefs that promotes understanding, but it should never become religious instruction.

Cụm cần nhớ

- **divide families and politicians** — chia rẽ gia đình và chính trị gia
- **in a balanced way** — một cách cân bằng
- **instructing pupils in a single faith** — dạy học sinh theo một tín ngưỡng
- **builds cultural understanding** — xây dựng hiểu biết văn hoá
- **shape art, literature, law and politics** — định hình nghệ thuật, văn học, luật và chính trị
- **current events** — thời sự
- **diverse societies** — xã hội đa dạng
- **weakens prejudice** — làm giảm định kiến
- **rely on stereotypes** — dựa vào khuôn mẫu
- **discuss sensitive subjects calmly and respectfully** — thảo luận chủ đề nhạy cảm bình tĩnh và tôn trọng
- **legitimate limits** — giới hạn chính đáng
- **a private matter** — chuyện riêng tư
- **clash with family wishes** — xung đột với mong muốn gia đình
- **amount to indoctrination** — trở thành sự nhồi sọ
- **risks overloading a timetable that is already full** — có nguy cơ làm quá tải thời khoá biểu vốn đã dày
- **factually and neutrally** — thực tế và trung lập
- **freedom of belief** — tự do tín ngưỡng
- **live peacefully with others** — sống hoà bình với người khác
- **deserves a place in** — xứng đáng có vị trí trong

#267 Agree / Disagree · 263 từ · AI 8.0 (chấm chéo 7.5)

Many people say that studying arts improves academic performance. Do you agree or disagree? Give reasons and examples.

Some people claim that studying the arts raises academic performance. I largely agree, since artistic activities develop concentration and motivation that carry over into other subjects, although the arts are not a substitute for core teaching.

To begin with, arts subjects train skills that support academic study. Learning to draw, act or play an instrument demands careful observation, sustained concentration and patient, repeated effort, and these habits carry over into mathematics, science and writing. Research has associated musical and visual training with stronger memory and spatial reasoning, which helps pupils to understand diagrams and solve problems. A pupil who has spent months mastering a difficult piece, for example, learns that perseverance eventually produces results, and may approach a hard mathematics problem with greater determination.

Furthermore, the arts keep many pupils engaged with school. Students who find written exams discouraging often thrive when they can perform, design or create something tangible, and this success restores their confidence and improves attendance and effort in other lessons. Pupils who feel that school values their strengths are also less likely to drop out. However, the evidence is not entirely clear. Better results may partly reflect the fact that motivated or well-supported pupils choose the arts, and arts classes cannot replace direct teaching of literacy and numeracy. Their value lies in complementing, not replacing, core lessons within a balanced timetable, and schools should therefore measure the effects carefully before making large changes.

In conclusion, I largely agree that studying the arts improves academic performance by building concentration, perseverance and engagement, although their benefits depend on a balanced curriculum.

Cụm cần nhớ

- **raises academic performance** — nâng cao kết quả học tập
- **develop concentration and motivation** — phát triển sự tập trung và động lực
- **carry over into other subjects** — chuyển sang các môn khác
- **not a substitute for core teaching** — không thay thế việc dạy các môn cốt lõi
- **careful observation, sustained concentration and patient, repeated effort** — quan sát kỹ, tập trung bền bỉ và nỗ lực kiên nhẫn, lặp lại
- **spatial reasoning** — tư duy không gian
- **solve problems** — giải quyết vấn đề
- **perseverance eventually produces results** — kiên trì rồi sẽ có kết quả
- **approach a hard mathematics problem with greater determination** — giải bài toán khó với quyết tâm cao hơn
- **keep many pupils engaged with school** — giữ nhiều học sinh gắn bó với trường
- **discouraging** — gây nản lòng
- **perform, design or create something tangible** — biểu diễn, thiết kế hay tạo ra thứ hữu hình
- **restores their confidence** — khôi phục sự tự tin
- **improves attendance and effort** — cải thiện chuyên cần và nỗ lực
- **feel that school values their strengths** — cảm thấy trường coi trọng điểm mạnh của mình
- **the evidence is not entirely clear** — bằng chứng chưa hoàn toàn rõ ràng
- **partly reflect the fact that** — một phần phản ánh việc
- **complementing, not replacing** — bổ sung chứ không thay thế
- **a balanced timetable** — thời khoá biểu cân đối

#275 Agree / Disagree · 269 từ · AI 7.0 (chấm chéo 8.0)

Some believe that standardized uniforms improve student equality. To what extent do you agree or disagree?

Some educators argue that requiring all pupils to wear the same uniform promotes equality among students. I largely agree, since uniforms hide visible differences in family wealth and reduce the pressure to compete over clothing, but they cannot remove deeper inequalities.

To begin with, a common uniform masks differences in income that would otherwise be obvious. Without it, pupils from wealthy families can arrive in expensive branded clothes, while those from low-income households may feel embarrassed by worn or secondhand items, and this contrast is a frequent cause of teasing and bullying. When everyone dresses the same, children are judged by their behaviour and effort rather than by labels, and over time this atmosphere of equal treatment helps pupils from different backgrounds to become friends. A pupil who cannot afford fashionable trainers, for example, no longer stands out as different.

Furthermore, uniforms ease the financial burden on families. Parents no longer face constant demands for the latest fashion, and a few durable items cost less than a wardrobe of everyday clothes, so households with limited budgets are spared an unfair expense. Pupils also gain a stronger sense of belonging, which supports cooperation across social groups. Nevertheless, uniforms have limits. Good-quality uniforms can themselves be expensive, and equality in appearance does not remove inequality in resources, home support or opportunity. They should therefore be affordable and supported by subsidies for poorer families, such as loan schemes for pupils whose households face financial hardship.

In conclusion, I believe that uniforms promote equality to a large extent by concealing wealth and reducing competition, although genuine equality also requires fair funding and support.

Cụm cần nhớ

- **promotes equality among students** — thúc đẩy bình đẳng giữa học sinh
- **hide visible differences in family wealth** — che đi khác biệt giàu nghèo dễ thấy
- **the pressure to compete over clothing** — áp lực ganh đua quần áo
- **deeper inequalities** — bất bình đẳng sâu hơn
- **masks differences in income** — che đi khác biệt về thu nhập
- **expensive branded clothes** — quần áo hàng hiệu đắt tiền
- **secondhand items** — đồ cũ
- **a frequent cause of teasing and bullying** — nguyên nhân thường gặp của trêu chọc và bắt nạt
- **judged by their behaviour and effort rather than by labels** — được đánh giá qua hành vi và nỗ lực thay vì nhãn mác
- **equal treatment** — đối xử bình đẳng
- **stands out as different** — nổi bật vì khác biệt
- **ease the financial burden on families** — giảm gánh nặng tài chính cho gia đình
- **limited budgets** — ngân sách eo hẹp
- **a stronger sense of belonging** — cảm giác thuộc về mạnh hơn
- **financial hardship** — khó khăn tài chính
- **concealing wealth** — che giấu sự giàu có

#281 Agree / Disagree · 261 từ · AI 8.0 (chấm chéo 8.0)

Some people say that homework improves learning outcomes. Do you agree or disagree?

Many parents and teachers assume that the more homework pupils do, the better they will learn. I disagree with this view, since extra work at home often brings little academic gain while taking a heavy toll on children's wellbeing and widening the gap between families.

To begin with, more homework does not necessarily mean more learning. Beyond a modest amount, additional tasks tend to produce diminishing returns, particularly for younger pupils, because repetitive worksheets and copied answers consume time without deepening understanding. Exhausted children also absorb less in the following day's lessons, which defeats the purpose of the extra work. Resentment builds, and some pupils come to associate learning with chores rather than curiosity. A child who spends two hours copying definitions every evening, for example, rarely gains more understanding than one who completes a single well-designed task.

Furthermore, homework often benefits the pupils who need it least. At home, children from crowded or noisy households, or with parents who cannot explain difficult tasks, are at a clear disadvantage compared with classmates who have a quiet desk and a private tutor, so assignments frequently measure family circumstances rather than ability. Some argue that homework teaches self-discipline, but this skill can equally be developed through supervised independent study during the school day. Learning that takes place in class gives everyone the same conditions and the same support, and teachers see what each pupil can do unaided.

In conclusion, I do not believe that homework improves learning outcomes in any meaningful way, given its diminishing returns and its unfair effects on disadvantaged pupils.

Cụm cần nhớ

- **little academic gain** — ít lợi ích học thuật
- **taking a heavy toll on** — gây tổn hại nặng nề đến
- **widening the gap between families** — nới rộng khoảng cách giữa các gia đình
- **more homework does not necessarily mean more learning** — làm nhiều bài tập chưa chắc học được nhiều hơn
- **diminishing returns** — lợi ích giảm dần
- **repetitive worksheets** — phiếu bài tập lặp lại
- **copied answers** — đáp án chép
- **consume time without deepening understanding** — tốn thời gian mà không làm hiểu sâu hơn
- **which defeats the purpose of the extra work** — làm mất ý nghĩa của khối lượng việc thêm
- **associate learning with chores** — gắn việc học với việc vặt
- **curiosity** — sự tò mò
- **benefits the pupils who need it least** — có lợi nhất cho học sinh ít cần nó
- **a quiet desk** — góc học yên tĩnh
- **a private tutor** — gia sư riêng
- **measure family circumstances rather than ability** — đo hoàn cảnh gia đình thay vì năng lực
- **self-discipline** — tính tự kỷ luật
- **supervised independent study** — tự học có giám sát
- **gives everyone the same conditions and the same support** — mang lại cho mọi người cùng điều kiện và cùng sự hỗ trợ
- **what each pupil can do unaided** — mỗi học sinh tự làm được gì mà không cần trợ giúp
- **improves learning outcomes** — cải thiện kết quả học tập
- **in any meaningful way** — theo bất kỳ cách có ý nghĩa nào
- **unfair effects on disadvantaged pupils** — tác động bất công với học sinh thiệt thòi

#329 Agree / Disagree · 275 từ · AI 7.5 (chấm chéo 7.5)

Many people say that apprenticeships provide better job prospects. Do you agree or disagree? Give reasons and examples.

Many people say that apprenticeships give young people better job prospects than purely academic routes. I largely agree with this view, since apprentices gain practical experience, earn while they learn and are often offered permanent jobs, although the advantage depends on the field.

To begin with, apprenticeships combine paid work with training, so young people gain exactly the experience that employers look for. Instead of finishing a course with a qualification but no work history, apprentices spend several years in a real workplace, learning from experienced colleagues and building a record of reliable performance. Employers who have trained an apprentice know their strengths and often offer them a permanent post, which means the move from education to work is smooth. A teenager who learns basic electrical installation as an apprentice, for example, may qualify for a stable, well-paid position instead of drifting between short-term jobs.

Furthermore, apprenticeships avoid the debt that many graduates carry. Apprentices receive a wage and usually pay no tuition fees, so they can begin saving, renting a home and supporting themselves earlier than classmates who spend years at university. Countries with strong apprenticeship systems, such as Germany, tend to have low youth unemployment, which suggests that this route improves prospects. However, the advantage is not universal. Some professions, such as medicine and law, require full degrees, and training that is too narrow may leave workers vulnerable if technology changes their trade. The best programmes therefore include transferable skills such as communication and problem solving.

In conclusion, apprenticeships generally offer better job prospects in many fields because of practical experience, earnings and employer links, although academic routes remain essential for some careers.

Cụm cần nhớ

- **better job prospects** — triển vọng việc làm tốt hơn
- **purely academic routes** — con đường thuần học thuật
- **earn while they learn** — vừa học vừa kiếm tiền
- **offered permanent jobs** — được mời làm việc lâu dài
- **combine paid work with training** — kết hợp việc làm có lương với đào tạo
- **learning from experienced colleagues** — học từ đồng nghiệp giàu kinh nghiệm
- **a record of reliable performance** — lý lịch làm việc đáng tin cậy
- **the move from education to work is smooth** — chuyển từ học sang làm trôi chảy
- **a stable, well-paid position** — vị trí ổn định, lương cao
- **drifting between short-term jobs** — trôi giữa các việc ngắn hạn
- **avoid the debt that many graduates carry** — tránh khoản nợ nhiều cử nhân gánh
- **pay no tuition fees** — không phải đóng học phí
- **apprenticeship systems** — hệ thống học nghề
- **not universal** — không phổ quát
- **leave workers vulnerable** — khiến người lao động dễ bị tổn thương
- **transferable skills** — kỹ năng có thể chuyển đổi
- **employer links** — liên kết với nhà tuyển dụng
- **remain essential** — vẫn thiết yếu

#368 Agree / Disagree · 255 từ · AI 8.0 (chấm chéo 8.0)

To what extent do you agree or disagree that school is a place for students to discover passions rather than focus on exams?

Many pupils feel that school is mainly about preparing for exams. I largely agree that it should instead be a place where students discover their passions, since interest drives learning and careers, although examinations still have an important role.

To begin with, discovering a passion motivates pupils to learn. Students who find that they love programming, music or biology study longer, ask more questions and persevere through difficulties without being pushed, because the work itself is rewarding. Passion also guides choices about future study and careers, so young people who have explored their interests are more likely to find satisfying work. Schools that offer clubs, projects and a wide range of subjects give pupils the opportunity to try many things. A pupil who joins a robotics club and discovers a talent for engineering, for instance, may choose a university course that suits her.

Furthermore, an exclusive focus on exams narrows education and increases stress. Written tests mainly reward memory and speed under timed conditions, while creativity and practical skills go unmeasured, and teaching tends to drift towards test preparation instead of genuine understanding. High-stakes tests also place students under excessive pressure. Admittedly, exams cannot be abandoned: qualifications are needed for university and employment, and they provide a fair standard. The aim should be balance, with exam preparation taking its place alongside exploration rather than dominating every lesson.

In conclusion, school should be mainly a place to discover passions, because this motivates learning and guides careers, as long as examinations keep a sensible but limited role.

Cụm cần nhớ

- **interest drives learning and careers** — hứng thú thúc đẩy học tập và nghề nghiệp
- **persevere through difficulties** — kiên trì vượt khó
- **without being pushed** — không cần bị thúc ép
- **because the work itself is rewarding** — vì bản thân việc học đã đáng giá
- **guides choices about future study and careers** — định hướng lựa chọn học tập và nghề nghiệp
- **satisfying work** — công việc thoả mãn
- **a wide range of subjects** — nhiều môn học đa dạng
- **discovers a talent for** — phát hiện tài năng về
- **an exclusive focus on exams** — chỉ tập trung vào thi cử
- **narrows education and increases stress** — thu hẹp giáo dục và tăng căng thẳng
- **mainly reward memory and speed under timed conditions** — chủ yếu thưởng cho trí nhớ và tốc độ trong điều kiện giới hạn thời gian
- **go unmeasured** — không được đo lường
- **teaching tends to drift towards test preparation instead of genuine understanding** — việc dạy có xu hướng trượt sang luyện thi thay vì hiểu thật sự
- **high-stakes tests** — bài thi quyết định (áp lực cao)
- **place students under excessive pressure** — đặt học sinh dưới áp lực quá mức
- **cannot be abandoned** — không thể bỏ
- **a fair standard** — chuẩn công bằng
- **exploration** — sự khám phá
- **a sensible but limited role** — vai trò hợp lý nhưng có giới hạn

#376 Agree / Disagree · 266 từ · AI 8.0 (chấm chéo 8.0)

Many people think that podcasting is a powerful educational tool. Do you agree? Explain with examples.

Podcasts, audio programmes that can be downloaded and played anywhere, have become popular far beyond entertainment. I agree that they are a powerful educational tool, since they make learning accessible and engaging, although they work best as a supplement to other methods.

To begin with, podcasts allow people to learn at times and in places where reading or watching is impossible. Learners can listen on the way to work, while exercising or doing housework, so time that would otherwise be wasted becomes study time. Lessons can be paused, replayed and played at different speeds, which helps students who need to hear an explanation more than once. Audio is also valuable for people with visual impairments and for those who learn best by listening. A commuter who spends an hour on the train each day, for example, can work through a whole language course in a few months.

Furthermore, a good podcast engages listeners through stories, interviews and expert voices. Hearing a historian describe an event or a scientist explain a discovery makes a subject feel alive in a way that a textbook paragraph often cannot, and language learners benefit from regular exposure to natural speech, accents and vocabulary. Most podcasts are also free or inexpensive, which widens access. However, listening is a passive activity, and without exercises, discussion or feedback, listeners may forget much of what they hear. Podcasts should therefore be combined with activities that require learners to respond.

In conclusion, I believe that podcasts are a powerful educational tool because they are flexible, accessible and engaging, provided that they are used alongside interactive learning.

Cụm cần nhớ

- **audio programmes** — chương trình âm thanh
- **downloaded and played anywhere** — tải về và phát ở bất cứ đâu
- **a powerful educational tool** — công cụ giáo dục mạnh mẽ
- **make learning accessible and engaging** — làm việc học dễ tiếp cận và hấp dẫn
- **work best as a supplement** — hiệu quả nhất khi là phần bổ trợ
- **listen on the way to work** — nghe trên đường đi làm
- **while exercising or doing housework** — khi tập thể dục hoặc làm việc nhà
- **time that would otherwise be wasted** — thời gian lẽ ra bị lãng phí
- **paused, replayed and played at different speeds** — tạm dừng, nghe lại và đổi tốc độ
- **visual impairments** — khiếm thị
- **learn best by listening** — học tốt nhất bằng nghe
- **engages listeners through stories, interviews and expert voices** — thu hút người nghe bằng câu chuyện, phỏng vấn và giọng chuyên gia
- **feel alive** — trở nên sống động
- **regular exposure to natural speech** — tiếp xúc thường xuyên với lời nói tự nhiên
- **a passive activity** — hoạt động thụ động
- **require learners to respond** — yêu cầu người học phản hồi
- **interactive learning** — học tương tác

Some believe that art education should be prioritized over competitive sports. To what extent do you agree or disagree?

Budgets and timetables are limited, so some people argue that art education deserves priority over competitive sports. I disagree with this view, since both contribute to children's development, and competitive sport offers health benefits and lessons in resilience that art alone cannot provide.

To begin with, sport contributes to physical health, which is increasingly urgent. Many children now spend hours sitting at screens, and rates of obesity and related illness are rising in many countries. Regular sport keeps pupils active, builds fitness and establishes habits that can last for life, whereas art lessons, however valuable, do not exercise the body. Schools that reduce sport to make room for art may therefore damage health and increase pressure on health services in the future. A child who plays football three times a week, for example, is more likely to stay active as an adult.

Furthermore, competitive sport teaches qualities that are difficult to develop elsewhere. Pupils learn to cooperate with teammates, take responsibility for the group and cope with both winning and losing, which builds resilience and self-control. Training also teaches discipline, since improvement comes from patient, repeated effort. Admittedly, art develops creativity and emotional expression, and some children thrive in studios more than on playing fields. For this reason, the two should not be set against each other. A balanced school gives every pupil access to both, and neither should be sacrificed to the other.

In conclusion, I do not believe that art education should be prioritised over competitive sport, because each develops different strengths that children need, and a balanced timetable serves them best.

Cụm cần nhớ

- **deserves priority** — xứng đáng được ưu tiên
- **competitive sports** — thể thao thi đấu
- **lessons in resilience** — bài học về sự bền bỉ
- **art alone cannot provide** — chỉ mỹ thuật thì không thể mang lại
- **physical health** — sức khoẻ thể chất
- **increasingly urgent** — ngày càng cấp bách
- **rates of obesity and related illness are rising in many countries** — tỉ lệ béo phì và bệnh liên quan đang tăng ở nhiều nước
- **builds fitness** — xây dựng thể lực
- **establishes habits that can last for life** — hình thành thói quen kéo dài cả đời
- **do not exercise the body** — không rèn luyện cơ thể
- **make room for art** — dành chỗ cho mỹ thuật
- **pressure on health services** — áp lực lên dịch vụ y tế
- **stay active** — giữ vận động
- **cope with both winning and losing** — đối mặt với cả chiến thắng lẫn thất bại
- **builds resilience and self-control** — xây dựng sự bền bỉ và tự chủ
- **improvement comes from patient, repeated effort** — tiến bộ đến từ nỗ lực kiên nhẫn, lặp lại
- **emotional expression** — biểu đạt cảm xúc
- **thrive in studios more than on playing fields** — phát huy ở xưởng nghệ thuật hơn sân thể thao
- **set against each other** — đặt đối lập nhau
- **neither should be sacrificed** — không bên nào nên bị hy sinh
- **a balanced timetable** — thời khoá biểu cân đối

Some people say that children should learn ethics in school. Do you agree or disagree?

Some people say that ethics belongs at home, while others believe that schools should also teach children how to think about right and wrong. I agree that children should learn ethics at school, since it develops sound judgement and prepares them to live respectfully in a diverse society.

To begin with, ethics lessons teach children to reason about moral questions instead of merely following rules. Through discussions of real dilemmas, such as whether to report a friend who cheats or how to behave online, pupils learn to weigh evidence, consider other perspectives and justify their decisions. This capacity for independent reasoning is invaluable when they face pressure from peers or tempting shortcuts later in life. A student who has debated the fairness of sharing exam answers, for example, may be better prepared to resist the temptation to cheat.

Furthermore, ethics education promotes tolerance and responsible citizenship. Classrooms bring together children from different cultures and beliefs, and structured discussions help them to listen respectfully to views they do not share, which weakens prejudice and strengthens cooperation. Some argue that moral values should be taught by families, but parents differ widely in their approaches and many children receive little guidance at home. Schools can complement the family by offering a neutral setting in which pupils explore ideas without being told what to think, so the lessons need not clash with parental beliefs. These skills contribute to safer, more cooperative communities.

In conclusion, I am convinced that ethics should be taught in schools because it builds independent moral judgement and mutual respect, provided that lessons encourage open discussion rather than instruction.

Cụm cần nhớ

- **right and wrong** — đúng và sai
- **develops sound judgement** — phát triển khả năng phán đoán đúng đắn
- **live respectfully in a diverse society** — sống tôn trọng trong xã hội đa dạng
- **reason about moral questions** — suy luận về vấn đề đạo đức
- **merely following rules** — chỉ làm theo quy tắc
- **real dilemmas** — tình huống tiến thoái lưỡng nan có thật
- **weigh evidence, consider other perspectives and justify their decisions** — cân nhắc bằng chứng, xét quan điểm khác và biện hộ cho quyết định
- **independent reasoning** — tư duy độc lập
- **pressure from peers** — áp lực từ bạn bè
- **tempting shortcuts** — lối tắt cám dỗ
- **resist the temptation to cheat** — cưỡng lại cám dỗ gian lận
- **promotes tolerance and responsible citizenship** — thúc đẩy khoan dung và công dân có trách nhiệm
- **listen respectfully to views they do not share** — lắng nghe tôn trọng quan điểm mình không chia sẻ
- **weakens prejudice** — làm giảm định kiến
- **complement the family** — bổ sung cho gia đình
- **a neutral setting** — môi trường trung lập
- **without being told what to think** — không bị bảo phải nghĩ gì
- **mutual respect** — tôn trọng lẫn nhau
- **open discussion rather than instruction** — thảo luận mở thay vì chỉ dạy

#428 Agree / Disagree · 268 từ · AI 8.0 (chấm chéo 7.5)

To what extent do you agree or disagree that technology should replace human teachers?

Advances in artificial intelligence and online platforms have led some people to suggest that technology could replace human teachers altogether. I strongly disagree with this view, since teachers provide motivation, guidance and human understanding that machines cannot offer, and an over-reliance on technology would deepen existing inequalities.

To begin with, good teaching depends on human relationships. A teacher can notice when a pupil is confused, anxious or struggling at home, adjust an explanation instantly and offer encouragement at the right moment. Teachers also act as role models, showing students how to argue respectfully, work with others and persevere when tasks are difficult. These qualities motivate learners in ways that software cannot reproduce. A shy pupil who finally speaks in class because a teacher patiently encouraged her, for example, gains a confidence that no automated system would have inspired. Teachers also adapt lessons to the mood and needs of a particular class, something that a pre-programmed system cannot do.

Furthermore, replacing teachers with technology would widen inequality and carry practical risks. Not every family can afford a modern device or a reliable internet connection, so children from low-income or rural households would fall further behind. Devices also offer endless temptations such as games and social media, and learners who study alone on a screen miss the discipline and immediate feedback that a teacher provides. Admittedly, technology can help with marking and practice, but this is a reason to use it as a tool, not as a substitute.

In conclusion, technology should complement rather than replace teachers, because education relies on human motivation, understanding and fairness that machines cannot provide.

Cụm cần nhớ

- **artificial intelligence** — trí tuệ nhân tạo
- **replace human teachers altogether** — thay hoàn toàn giáo viên
- **motivation, guidance and human understanding** — động lực, định hướng và sự thấu hiểu của con người
- **over-reliance on technology** — quá phụ thuộc vào công nghệ
- **deepen existing inequalities** — làm sâu sắc thêm bất bình đẳng sẵn có
- **depends on human relationships** — phụ thuộc quan hệ con người
- **notice when a pupil is confused, anxious or struggling at home** — nhận ra khi học sinh bối rối, lo âu hay khó khăn ở nhà
- **offer encouragement at the right moment** — động viên đúng lúc
- **act as role models** — làm hình mẫu
- **argue respectfully** — tranh luận tôn trọng
- **persevere when tasks are difficult** — kiên trì khi việc khó
- **cannot reproduce** — không thể tái tạo
- **patiently encouraged her** — kiên nhẫn động viên em
- **a pre-programmed system** — hệ thống lập trình sẵn
- **a reliable internet connection** — kết nối internet ổn định
- **fall further behind** — tụt lại xa hơn
- **endless temptations such as games and social media** — vô số cám dỗ như trò chơi và mạng xã hội
- **immediate feedback** — phản hồi tức thì
- **as a tool, not as a substitute** — như công cụ chứ không phải sự thay thế
- **complement rather than replace teachers** — bổ trợ chứ không thay thế giáo viên

#443 Agree / Disagree · 259 từ · AI 8.0 (chấm chéo 8.0)

Some people say that multilingual education is difficult for teachers. Do you agree or disagree?

Many schools around the world now teach in more than one language, and some people say that this is difficult for teachers. I largely agree, since multilingual education places considerable demands on staff, although these demands can be reduced with proper support.

To begin with, teachers must meet demanding language and preparation requirements. Staff must prepare materials in several languages, hold advanced language qualifications and adapt lessons for pupils at very different levels, all within the same working day. A science teacher required to deliver chemistry in a second language, for example, must first master the specialist vocabulary herself. Qualified teachers who are fluent in more than one language are also scarce, so schools may struggle to recruit enough of them, and existing staff face heavy workloads.

Furthermore, classrooms with mixed language levels complicate teaching and assessment. Some pupils speak the language of instruction fluently while others are only beginning, so teachers must explain concepts in several ways and design different tasks, which leaves less time for individual attention. Without extra training and support, this additional workload leaves many teachers exhausted and weakens the quality of lessons. However, the difficulty can be reduced. Governments can fund training and language courses for teachers, provide teaching assistants and shared materials, and limit class sizes. The educational and cultural benefits of multilingual education justify this investment, but it must not be left to individual teachers to cope alone.

In conclusion, multilingual education is difficult for teachers because of its workload and varied classrooms, but with training and resources the challenge is manageable.

Cụm cần nhớ

- **difficult for teachers** — khó khăn cho giáo viên
- **multilingual education** — giáo dục đa ngôn ngữ
- **places considerable demands on staff** — đặt yêu cầu lớn lên đội ngũ
- **proper support** — sự hỗ trợ đúng mức
- **demanding language and preparation requirements** — yêu cầu cao về ngôn ngữ và chuẩn bị
- **prepare materials** — chuẩn bị tài liệu
- **advanced language qualifications** — bằng cấp ngôn ngữ nâng cao
- **adapt lessons for pupils at very different levels** — điều chỉnh bài cho học sinh nhiều trình độ
- **master the specialist vocabulary** — nắm vững từ vựng chuyên ngành
- **fluent in more than one language** — thông thạo hơn một ngôn ngữ
- **struggle to recruit enough of them** — khó tuyển đủ số lượng
- **Heavy workloads** — khối lượng công việc nặng
- **mixed language levels** — trình độ ngôn ngữ khác nhau
- **complicate teaching and assessment** — làm phức tạp việc dạy và đánh giá
- **the language of instruction** — ngôn ngữ giảng dạy
- **leaves less time for individual attention** — để lại ít thời gian cho sự chú ý riêng
- **weakens the quality of lessons** — làm giảm chất lượng bài giảng
- **fund training and language courses** — tài trợ đào tạo và khoá ngôn ngữ
- **cope alone** — tự xoay xở một mình
- **the challenge is manageable** — thách thức có thể kiểm soát

#448 Agree / Disagree · 256 từ · AI 7.5 (chấm chéo 8.0)

To what extent do you agree or disagree that school sports should be competitive?

Some schools emphasise competition in sport, while others prefer participation. I largely agree that school sports should be competitive, since competition builds resilience and teamwork, provided that no pupil is excluded or humiliated.

To begin with, competition teaches pupils how to handle both success and failure. Playing to win encourages effort, concentration and perseverance, while losing teaches children to accept disappointment and try again, which builds resilience that will serve them in exams and careers. Practising and improving for a match also shows that results come from patient, repeated effort rather than natural talent alone. A team that loses a match, for example, may learn to analyse its mistakes and train more effectively before the next game.

Furthermore, team competition fosters cooperation and a sense of belonging. Players must listen to others, accept roles and take shared responsibility for the result, and supporting the school team builds pride and community spirit. Competitive fixtures also motivate many pupils to keep fit. However, competition should be handled carefully. If only the strongest pupils play, weaker children may feel excluded or lose confidence, and excessive pressure to win can lead to conflict or injury. Schools should therefore offer teams at different levels, emphasise effort and fair play as much as victory, and provide non-competitive activities for those who prefer them, so that every child can enjoy sport in a way that suits them.

In conclusion, school sports should be competitive to a large extent because competition develops resilience and teamwork, but only when inclusion and fair play are protected.

Cụm cần nhớ

- **emphasise competition** — nhấn mạnh cạnh tranh
- **participation** — sự tham gia
- **school sports should be competitive** — thể thao học đường nên mang tính thi đấu
- **builds resilience and teamwork** — xây dựng sự bền bỉ và tinh thần đồng đội
- **handle both success and failure** — đối mặt cả thành công lẫn thất bại
- **accept disappointment and try again** — chấp nhận thất vọng và thử lại
- **resilience** — khả năng phục hồi
- **patient, repeated effort** — nỗ lực kiên nhẫn, lặp lại
- **natural talent alone** — chỉ tài năng bẩm sinh
- **analyse its mistakes** — phân tích sai lầm
- **train more effectively** — tập luyện hiệu quả hơn
- **accept roles** — chấp nhận vai trò
- **take shared responsibility** — cùng chịu trách nhiệm
- **community spirit** — tinh thần cộng đồng
- **keep fit** — giữ dáng, giữ sức khoẻ
- **feel excluded or lose confidence** — cảm thấy bị loại hoặc mất tự tin
- **excessive pressure to win** — áp lực thắng quá mức
- **teams at different levels** — đội ở nhiều trình độ
- **emphasise effort and fair play as much as victory** — coi trọng nỗ lực và chơi đẹp ngang với chiến thắng
- **inclusion** — sự hoà nhập
- **fair play** — chơi đúng luật

How can governments encourage reading among children? Suggest practical measures.

Reading for pleasure has declined among children in many countries, as screens compete for their attention. This essay will suggest practical measures that governments could take, focusing on access to books and on building a lasting reading habit.

First and foremost, governments should make books easy to obtain for every child. Many families on low incomes cannot afford to buy books regularly, so funding for well-stocked school and public libraries is essential, and mobile libraries could reach rural communities where there are no bookshops. Free book-gifting schemes, in which every newborn or school starter receives age-appropriate titles, would also put books into homes where there are few. Schemes such as Bookstart in the United Kingdom, for instance, give free books to families with young children to encourage reading from an early age. Such investment is modest compared with the long-term benefits, since children who read widely generally achieve better results across all subjects.

In addition, authorities should help children to enjoy reading rather than treat it as a chore. Schools could be required to set aside a short daily reading period and to let pupils choose books that match their interests, since enjoyment, not obligation, creates lasting habits. Authors' visits, reading challenges with small rewards and national campaigns featuring popular sportspeople as role models would make reading appear attractive. Furthermore, parents should be encouraged, through workshops and free advice, to read with their children at home, as children who see adults reading are more likely to imitate them. A boy who dislikes novels, for example, may become an enthusiastic reader once offered a book about his favourite football team.

In conclusion, expanding access to books and making reading enjoyable through schools, campaigns and families offer the most realistic way of encouraging children to read.

Cụm cần nhớ

- **Reading for pleasure** — đọc để giải trí
- **compete for their attention** — tranh giành sự chú ý của chúng
- **practical measures** — biện pháp thiết thực
- **make books easy to obtain for every child** — làm cho mọi trẻ em dễ dàng có sách
- **well-stocked school and public libraries** — thư viện trường và công đầy đủ sách
- **mobile libraries could reach rural communities** — thư viện lưu động có thể đến cộng đồng nông thôn
- **book-gifting schemes** — chương trình tặng sách
- **age-appropriate** — phù hợp lứa tuổi
- **put books into homes** — đưa sách vào các gia đình
- **modest compared with the long-term benefits** — nhỏ so với lợi ích lâu dài
- **treat it as a chore** — coi đó là việc vặt
- **enjoyment, not obligation, creates lasting habits** — niềm thích thú chứ không phải bắt buộc mới tạo thói quen lâu dài
- **reading challenges** — thử thách đọc sách
- **role models** — hình mẫu
- **workshops and free advice** — hội thảo và tư vấn miễn phí
- **children who see adults reading are more likely to imitate them** — trẻ thấy người lớn đọc sách có nhiều khả năng bắt chước

What are the causes of poor educational outcomes in inner cities? What solutions can be proposed?

The issue of poor educational outcomes in inner-city areas is a matter of growing concern. This essay will analyse the principal causes and propose realistic solutions.

Social and economic disadvantage lies behind poor educational outcomes in inner-city areas in many communities. Children from low-income households often lack a quiet place to study, adequate nutrition or parental support, because their parents may work long hours or several jobs, and this holds back their attainment from an early age. In addition, chronic underfunding is a major contributor to this problem. When budgets are tight, schools cannot recruit enough qualified staff, maintain their buildings or purchase up-to-date materials, and experienced teachers tend to move to more comfortable districts. The resulting strain on existing resources makes the situation steadily worse.

To address this issue, governments should commit more funding to schools in deprived areas, since this tackles the problem at its source. Extra money can be channelled into recruiting teachers, constructing classrooms and modernising equipment, and financial incentives can attract and keep experienced staff, which relieves pressure where it is felt most. In addition, stronger support systems would reduce the strain on both learners and staff. Free breakfasts, after-school study clubs and mentoring give children the nutrition, space and encouragement they may lack at home, and ensure that problems are identified early instead of escalating into crises. Prevention of this kind is far less costly than dealing with the consequences later.

In conclusion, the issue of poor educational outcomes in inner-city areas stems mainly from social and economic disadvantage and underfunding, but greater investment and stronger support systems offer a realistic way forward.

Cụm cần nhớ

- **poor educational outcomes** — kết quả giáo dục kém
- **a matter of growing concern** — vấn đề ngày càng đáng lo ngại
- **analyse the principal causes** — phân tích các nguyên nhân chính
- **lies behind** — nằm sau
- **lack a quiet place to study** — thiếu chỗ học yên tĩnh
- **adequate nutrition** — dinh dưỡng đầy đủ
- **holds back their attainment** — kìm hãm thành tích của chúng
- **chronic underfunding** — thiếu kinh phí kéo dài
- **is a major contributor to / plays a substantial part in** — là nhân tố góp phần lớn vào
- **recruit enough qualified staff** — tuyển đủ nhân sự đủ chuẩn
- **maintain their buildings** — bảo trì toà nhà
- **up-to-date materials** — tài liệu cập nhật
- **tend to move to** — có xu hướng chuyển sang
- **makes the situation steadily worse** — khiến tình hình ngày càng tệ
- **deprived areas** — khu vực khó khăn
- **after-school study clubs** — câu lạc bộ học sau giờ
- **problems are identified early instead of escalating into crises** — vấn đề được phát hiện sớm thay vì trầm trọng thành khủng hoảng
- **prevention of this kind is far less costly than dealing with the consequences later** — phòng ngừa như vậy rẻ hơn nhiều so với xử lý hậu quả sau này
- **stems mainly from** — chủ yếu bắt nguồn từ
- **greater investment** — đầu tư nhiều hơn
- **offer a realistic way forward** — mở ra hướng đi thực tế

What are the causes of student stress at university? What solutions can be proposed?

University is often seen as an exciting stage of life, yet a growing number of students report high levels of stress. This essay will analyse the principal causes and propose realistic solutions.

Intense academic pressure is a leading cause of student stress at university. Heavy workloads, frequent deadlines and competition for good grades leave little time for rest, and students fear that poor results will damage their career prospects. The constant strain accumulates over months and eventually affects both health and performance. In addition, financial worries add to the burden. Rising tuition fees, living costs and the need to work part-time leave little room to relax, and living away from home for the first time can leave some students feeling isolated and overwhelmed. A first-year student who works evenings to pay rent, for example, may have little energy left to study.

To address this issue, universities should provide stronger support systems. Counselling services, mentoring schemes and reasonable limits on workload ensure that problems are identified early instead of escalating into crises, and clearer deadlines and assessment calendars allow students to plan ahead. In addition, provision should be made more affordable. Subsidised accommodation, hardship funds and grants towards living costs allow students to concentrate on study without sacrificing their income. Such measures are far less costly than dealing with dropouts and mental health emergencies later, and they help students to complete their degrees successfully.

In conclusion, student stress at university stems mainly from academic pressure and financial worries, but stronger support systems and affordable provision offer a realistic way forward.

Cụm cần nhớ

- **an exciting stage of life** — giai đoạn thú vị của cuộc đời
- **report high levels of stress** — báo cáo mức căng thẳng cao
- **analyse the principal causes** — phân tích các nguyên nhân chính
- **Intense academic pressure** — áp lực học tập nặng nề
- **a leading cause of** — nguyên nhân hàng đầu của
- **Heavy workloads** — khối lượng công việc nặng
- **frequent deadlines** — hạn chót dày đặc
- **competition for good grades** — cạnh tranh điểm cao
- **damage their career prospects** — làm hại triển vọng nghề nghiệp
- **accumulates over months** — tích tụ qua nhiều tháng
- **financial worries** — lo lắng tài chính
- **add to the burden** — làm gánh nặng thêm
- **Rising tuition fees** — học phí tăng
- **isolated and overwhelmed** — cô lập và choáng ngợp
- **Counselling services** — dịch vụ tư vấn tâm lý
- **mentoring schemes** — chương trình cố vấn
- **reasonable limits on workload** — giới hạn hợp lý về khối lượng công việc
- **problems are identified early instead of escalating into crises** — vấn đề được phát hiện sớm thay vì trầm trọng thành khủng hoảng
- **clearer deadlines and assessment calendars** — hạn chót và lịch đánh giá rõ ràng hơn
- **plan ahead** — lên kế hoạch trước
- **Subsidised accommodation** — chỗ ở được trợ giá
- **hardship funds and grants towards living costs** — quỹ hỗ trợ khó khăn và trợ cấp sinh hoạt
- **without sacrificing their income** — không phải hy sinh thu nhập
- **mental health emergencies** — khủng hoảng sức khoẻ tinh thần
- **stems mainly from** — chủ yếu bắt nguồn từ
- **offer a realistic way forward** — mở ra hướng đi thực tế

What are the causes of teacher shortages? What solutions can be proposed?

The issue of teacher shortages is a growing concern in many countries. This essay will analyse the principal causes and propose realistic solutions.

Heavy workloads combined with modest pay are a significant source of teacher shortages. Teachers who face long hours, endless paperwork and relatively low salaries often feel undervalued and exhausted, and many either leave the profession or never enter it. This vicious circle leaves the remaining staff with even more to handle. In addition, teaching has lost status in some societies. Graduates who can earn more in business or technology see little reason to choose a career that offers limited recognition and promotion, so schools struggle to recruit in subjects such as mathematics and science. A talented engineering graduate, for example, may earn far more in industry than in a classroom.

To address this issue, authorities should offer attractive incentives such as higher salaries, scholarships and structured career pathways. Such measures encourage talented individuals to enter and remain in the field, and ongoing training keeps them confident in their roles. A stable, motivated workforce in turn raises standards for everyone. In addition, stronger support systems would reduce the strain on both learners and staff. Reasonable limits on administrative work, mentoring for new teachers and access to counselling ensure that problems are identified early instead of escalating into crises, so that fewer teachers leave in their first years. Prevention of this kind is far less costly than recruiting replacements again and again.

In conclusion, teacher shortages stem mainly from heavy workloads and low pay, but attractive incentives and stronger support systems offer a realistic way forward.

Cụm cần nhớ

- **teacher shortages** — tình trạng thiếu giáo viên
- **analyse the principal causes** — phân tích các nguyên nhân chính
- **Heavy workloads** — khối lượng công việc nặng
- **a significant source of** — nguồn gốc đáng kể của
- **long hours, endless paperwork** — giờ làm dài, giấy tờ vô tận
- **relatively low salaries** — mức lương tương đối thấp
- **feel undervalued and exhausted** — cảm thấy không được trân trọng và kiệt sức
- **leave the profession** — rời bỏ nghề
- **has lost status** — đã mất địa vị
- **limited recognition and promotion** — ít được công nhận và thăng tiến
- **struggle to recruit** — khó tuyển dụng
- **attractive incentives** — ưu đãi hấp dẫn
- **structured career pathways** — lộ trình nghề nghiệp rõ ràng
- **remain in the field** — ở lại ngành
- **ongoing training** — đào tạo liên tục
- **a stable, motivated workforce** — đội ngũ ổn định, có động lực
- **raises standards for everyone** — nâng chuẩn cho tất cả
- **administrative work** — công việc hành chính
- **problems are identified early instead of escalating into crises** — vấn đề được phát hiện sớm thay vì trầm trọng thành khủng hoảng
- **recruiting replacements** — tuyển người thay thế
- **offer a realistic way forward** — mở ra hướng đi thực tế

What are the causes of student debt? What solutions can be proposed?

The issue of student debt is a matter of growing concern. This essay will analyse the principal causes and propose realistic solutions.

Financial barriers play a substantial part in student debt. Rising tuition fees, living costs and the loss of income while studying discourage many people from continuing their education or push them into heavy borrowing. This is particularly true for those from modest backgrounds. In addition, social and economic disadvantage lies behind student debt in many families. Students whose parents cannot help with fees or rent have no alternative to loans, and graduates who then find only low-paid or insecure work struggle to repay them. A student from a low-income family, for example, may finish a degree owing the equivalent of several years' salary.

To address this issue, provision should be made more flexible and affordable. Grants, scholarships and subsidised accommodation reduce the amount that students need to borrow, and loans repaid only when graduates earn above a certain income protect them from unmanageable payments. Barriers fall as a result, and participation rises among groups that were previously excluded. In addition, governments should commit more funding to higher education, since this tackles the problem at its source. Extra money can be channelled into lowering fees, expanding paid work-study placements and promoting alternatives such as apprenticeships, in which learners earn while they study, so that fewer young people need to borrow at all.

In conclusion, student debt stems mainly from financial barriers and social disadvantage, but affordable provision and greater investment offer a realistic way forward.

Cụm cần nhớ

- **student debt** — nợ sinh viên
- **a matter of growing concern** — vấn đề ngày càng đáng lo ngại
- **analyse the principal causes** — phân tích các nguyên nhân chính
- **Financial barriers** — rào cản tài chính
- **play a substantial part in** — đóng vai trò đáng kể trong
- **Rising tuition fees** — học phí tăng
- **the loss of income while studying** — mất thu nhập khi đi học
- **push them into heavy borrowing** — đẩy họ vào vay nợ nặng
- **from modest backgrounds** — có hoàn cảnh khiêm tốn
- **lies behind** — nằm sau
- **no alternative to loans** — không có lựa chọn nào ngoài vay
- **low-paid or insecure work** — việc lương thấp hoặc bấp bênh
- **struggle to repay** — khó trả nợ
- **owing the equivalent of several years' salary** — nợ số tiền tương đương nhiều năm lương
- **Grants, scholarships and subsidised accommodation** — học bổng, trợ cấp và chỗ ở được trợ giá
- **loans repaid only when graduates earn above a certain income** — khoản vay chỉ phải trả khi người tốt nghiệp có thu nhập trên một mức nhất định
- **unmanageable payments** — khoản trả quá sức
- **participation rises** — tỷ lệ tham gia tăng
- **previously excluded** — trước đây bị loại trừ
- **paid work-study placements** — vị trí vừa học vừa làm có lương
- **learners earn while they study** — người học vừa học vừa kiếm tiền
- **stems mainly from** — chủ yếu bắt nguồn từ
- **greater investment** — đầu tư nhiều hơn
- **offer a realistic way forward** — mở ra hướng đi thực tế

How can governments promote STEM careers among girls? Suggest practical measures.

Women remain under-represented in science and technology careers in most countries. This essay will suggest practical measures that governments could take, focusing on role models and early exposure, and on financial and workplace support.

To begin with, awareness campaigns and visible role models would change attitudes towards the subjects. Media campaigns, mentoring by successful women scientists and engineers, and visits to laboratories and technology companies show girls that study leads to rewarding careers. Once these links become clear, motivation tends to follow. Equally important, early exposure through school clubs and hands-on projects, such as coding or robotics, builds confidence before stereotypes take hold, particularly if teachers are trained to encourage all pupils equally. A girl who builds a simple robot at primary school, for example, is more likely to see engineering as a future option.

In addition, authorities should offer attractive incentives such as scholarships and structured career pathways. Grants for girls who study science at university, internships in industry and clear routes to promotion encourage talented individuals to enter and remain in the field. Employers also need to provide flexible working hours and tackle discrimination, since young women will not choose careers in which they expect to feel unwelcome. Stronger support systems, such as mentoring schemes, would reduce the strain on those who are often the only woman in a team. A stable, supportive environment in turn raises standards for everyone and keeps skilled people in the profession.

In conclusion, role models, early exposure and financial and workplace support offer the most realistic way forward in encouraging girls to pursue careers in science and technology.

Cụm cần nhớ

- **under-represented in** — ít được đại diện trong
- **practical measures** — biện pháp thiết thực
- **role models** — hình mẫu
- **early exposure** — tiếp xúc sớm
- **awareness campaigns** — chiến dịch nâng cao nhận thức
- **visible role models** — hình mẫu dễ thấy
- **change attitudes** — thay đổi thái độ
- **mentoring by successful women scientists and engineers** — sự cố vấn của các nữ nhà khoa học và kỹ sư thành đạt
- **rewarding careers** — nghề nghiệp đáng giá
- **motivation tends to follow** — động lực thường theo sau
- **hands-on projects** — dự án thực hành
- **builds confidence before stereotypes take hold** — xây dựng tự tin trước khi định kiến bám rễ
- **trained to encourage all pupils equally** — được đào tạo để khuyến khích mọi học sinh như nhau
- **attractive incentives** — ưu đãi hấp dẫn
- **structured career pathways** — lộ trình nghề nghiệp rõ ràng
- **clear routes to promotion** — lộ trình thăng tiến rõ ràng
- **remain in the field** — ở lại ngành
- **flexible working hours** — giờ làm linh hoạt
- **tackle discrimination** — giải quyết phân biệt đối xử
- **mentoring schemes** — chương trình cố vấn
- **the only woman in a team** — người phụ nữ duy nhất trong nhóm
- **raises standards for everyone** — nâng chuẩn cho tất cả

What are the causes of teacher burnout? What solutions can be proposed?

The issue of teacher burnout is a growing concern in many countries. This essay will analyse the principal causes and propose realistic solutions.

Heavy workloads combined with modest pay are a significant source of teacher burnout. Teachers who face long hours, endless paperwork and relatively low salaries often feel undervalued and exhausted, and many either leave the profession or never enter it. In addition, constant pressure from inspections, test targets and large, sometimes difficult classes leaves little room for recovery, and many teachers receive little emotional support. A teacher who marks papers every evening and weekend, for example, has almost no time to rest, so exhaustion accumulates over the years. This vicious circle leaves the remaining staff with even more to handle.

To address this issue, stronger support systems would reduce the strain on teachers. Counselling services, mentoring schemes and reasonable limits on workload ensure that problems are identified early instead of escalating into crises. In addition, governments should commit more funding to schools, since this tackles the problem at its source. Extra money can be channelled into hiring teaching assistants, reducing class sizes and cutting unnecessary paperwork, which relieves pressure where it is felt most. Fair salaries and clear career pathways would also make teaching a respected and sustainable profession. Prevention of this kind is far less costly than dealing with the consequences later, because experienced teachers who stay are worth far more than constant replacements.

In conclusion, teacher burnout stems mainly from heavy workloads and lack of support, but stronger support systems and greater investment offer a realistic way forward.

Cụm cần nhớ

- **teacher burnout** — kiệt sức nghề nghiệp ở giáo viên
- **analyse the principal causes** — phân tích các nguyên nhân chính
- **Heavy workloads** — khối lượng công việc nặng
- **a significant source of** — nguồn gốc đáng kể của
- **long hours, endless paperwork** — giờ làm dài, giấy tờ vô tận
- **relatively low salaries** — mức lương tương đối thấp
- **feel undervalued and exhausted** — cảm thấy không được trân trọng và kiệt sức
- **leave the profession** — rời bỏ nghề
- **constant pressure from inspections, test targets** — áp lực liên tục từ thanh tra, chỉ tiêu thi
- **large, sometimes difficult classes** — lớp đông, đôi khi khó quản
- **leaves little room for recovery** — ít chỗ để hồi phục
- **receive little emotional support** — ít được hỗ trợ tinh thần
- **marks papers every evening and weekend** — chấm bài mỗi tối và cuối tuần
- **almost no time to rest** — gần như không có thời gian nghỉ
- **exhaustion accumulates** — sự kiệt sức tích tụ
- **Counselling services** — dịch vụ tư vấn tâm lý
- **mentoring schemes** — chương trình cố vấn
- **reasonable limits on workload** — giới hạn hợp lý về khối lượng công việc
- **problems are identified early instead of escalating into crises** — vấn đề được phát hiện sớm thay vì trầm trọng thành khủng hoảng
- **hiring teaching assistants** — thuê trợ giảng
- **reducing class sizes** — giảm sĩ số lớp
- **cutting unnecessary paperwork** — cắt giấy tờ không cần thiết
- **Fair salaries** — mức lương công bằng
- **a respected and sustainable profession** — nghề được tôn trọng và bền vững
- **prevention of this kind is far less costly than dealing with the consequences later** — phòng ngừa như vậy rẻ hơn nhiều so với xử lý hậu quả sau này
- **experienced teachers who stay** — giáo viên giàu kinh nghiệm ở lại
- **constant replacements** — liên tục thay người
- **stems mainly from** — chủ yếu bắt nguồn từ
- **greater investment** — đầu tư nhiều hơn
- **offer a realistic way forward** — mở ra hướng đi thực tế

What are the causes of overcrowded classrooms? What solutions can be proposed?

The issue of overcrowded classrooms is a growing concern in many countries. This essay will analyse the principal causes and propose realistic solutions.

Chronic underfunding is a major contributor to overcrowded classrooms. When budgets are tight, schools cannot recruit enough qualified staff, maintain their buildings or construct new ones, so existing classes simply grow larger. The resulting strain on existing resources makes the situation steadily worse. In addition, rapid population growth and urban migration contribute to this problem. When families move to cities faster than new schools are built, existing classrooms must absorb additional children. Over time, this pushes class sizes well beyond a manageable level. A city school built for six hundred pupils that now enrols nine hundred, for example, must squeeze three children into spaces designed for two.

To address this issue, governments should commit more funding to education, since this tackles the problem at its source. Extra money can be channelled into recruiting teachers, constructing classrooms and modernising equipment, which relieves pressure where it is felt most. School building should also be planned in line with population data, so that authorities that track migration can build schools and recruit teachers in advance. In addition, authorities should offer attractive incentives such as higher salaries and housing support to attract teachers to overcrowded districts. Temporary measures such as shift systems and online lessons can relieve pressure while new classrooms are built, although they should not become permanent.

In conclusion, overcrowded classrooms stem mainly from underfunding and rapid population growth, but greater investment and careful planning offer a realistic way forward.

Cụm cần nhớ

- **overcrowded classrooms** — lớp học quá đông
- **analyse the principal causes** — phân tích các nguyên nhân chính
- **chronic underfunding** — thiếu kinh phí kéo dài
- **is a major contributor to / plays a substantial part in** — là nhân tố góp phần lớn vào
- **recruit enough qualified staff** — tuyển đủ nhân sự đủ chuẩn
- **maintain their buildings** — bảo trì toà nhà
- **existing classes simply grow larger** — các lớp hiện có đơn giản là đông thêm
- **makes the situation steadily worse** — khiến tình hình ngày càng tệ
- **rapid population growth** — dân số tăng nhanh
- **urban migration** — di cư ra đô thị
- **absorb additional children** — tiếp nhận thêm trẻ
- **well beyond a manageable level** — vượt xa mức có thể quản lý
- **squeeze three children into spaces designed for two** — nhồi ba trẻ vào chỗ dành cho hai
- **in line with population data** — phù hợp dữ liệu dân số
- **in advance** — trước
- **attractive incentives** — ưu đãi hấp dẫn
- **housing support** — hỗ trợ nhà ở
- **temporary** — tạm thời
- **shift systems** — chế độ học theo ca
- **relieve pressure** — giảm áp lực
- **should not become permanent** — không nên thành vĩnh viễn
- **greater investment** — đầu tư nhiều hơn
- **careful planning** — lập kế hoạch cẩn thận
- **offer a realistic way forward** — mở ra hướng đi thực tế

What are the causes of low participation in adult education? What solutions can be proposed?

The issue of low participation in adult education is a matter of growing concern. This essay will analyse the principal causes and propose realistic solutions.

Financial barriers play a substantial part in low participation in adult education. Fees, living costs and the loss of income while studying discourage many people from returning to education, particularly those from modest backgrounds. In addition, low awareness and motivation contribute to this problem. Where people see little connection between study and tangible rewards, or are held back by stereotypes and busy schedules, they simply do not engage. Working adults with family commitments are typical examples, as they must balance jobs, childcare and household tasks. A single parent who works two jobs, for example, has neither the money nor the energy for evening classes.

To address this issue, provision should be made more flexible and affordable. Subsidised fees, evening and online courses, and grants towards living costs allow people with limited money or time to participate without sacrificing their income. Barriers fall as a result, and participation rises among groups that were previously excluded. In addition, awareness campaigns and visible role models would change attitudes towards learning. Media campaigns, mentoring by successful adult learners and support from employers, such as paid study leave, show people that study leads to rewarding careers. Once these links become clear, motivation tends to follow, and workplaces can become partners in training.

In conclusion, low participation in adult education stems mainly from financial barriers and low awareness, but flexible and affordable provision and awareness campaigns offer a realistic way forward.

Cụm cần nhớ

- **low participation** — tỷ lệ tham gia thấp
- **adult education** — giáo dục người lớn
- **a matter of growing concern** — vấn đề ngày càng đáng lo ngại
- **analyse the principal causes** — phân tích các nguyên nhân chính
- **Financial barriers** — rào cản tài chính
- **play a substantial part in** — đóng vai trò đáng kể trong
- **the loss of income while studying** — mất thu nhập khi đi học
- **returning to education** — quay lại học
- **from modest backgrounds** — có hoàn cảnh khiêm tốn
- **low awareness and motivation** — nhận thức và động lực thấp
- **tangible rewards** — phần thưởng hữu hình
- **held back by stereotypes and busy schedules** — bị cản bởi định kiến và lịch bận
- **do not engage** — không tham gia
- **working adults** — người lao động trưởng thành
- **family commitments** — trách nhiệm gia đình
- **balance jobs, childcare and household tasks** — cân bằng công việc, trông con và việc nhà
- **neither the money nor the energy** — không đủ tiền lẫn sức
- **evening classes** — lớp buổi tối
- **Subsidised fees** — học phí được trợ giá
- **limited money or time** — tiền hoặc thời gian hạn chế
- **without sacrificing their income** — không phải hy sinh thu nhập
- **participation rises** — tỷ lệ tham gia tăng
- **previously excluded** — trước đây bị loại trừ
- **awareness campaigns** — chiến dịch nâng cao nhận thức
- **visible role models** — hình mẫu dễ thấy
- **change attitudes towards learning** — thay đổi thái độ với việc học
- **paid study leave** — nghỉ học có lương
- **rewarding careers** — nghề nghiệp đáng giá
- **motivation tends to follow** — động lực thường theo sau
- **become partners in training** — trở thành đối tác trong đào tạo

- **stems mainly from** — chủ yếu bắt nguồn từ
- **offer a realistic way forward** — mở ra hướng đi thực tế
